Reviewed and submitted for publication by

Jack L. Blackhurst, Major, USAF Chief, Advanced On-the-job Training System Program

This publication is primarily a working paper. It is published solely to document work performed.

SUMMARY

The Advanced On-the-job Training System (AOTS) was an Air Staff-directed, AFHRL-developed prototype which designed, developed, and tested a proof-of-concept prototype AOTS within the operational environment of selected work centers at Bergstrom AFB, Texas, and Ellington ANGB, Texas, from August 1985 through 31 July 1989. The Master Test Plan (MTP) describes the overall strategy that was followed during the test and evaluation of the Advanced On-the-job Training (AOTS). The Master Test Plan is synonymous with program evaluation and consists of a plan to evaluate AOTS with regard to assessment of the four critical issues of system compliance, acceptance, performance and suitability. Within the MTP, these critical issues are assessed at subcomponent, component, and subsystem levels.

PREFACE

This paper was developed by Douglas Aircraft Company, the AOTS development contractor, under Government Contract Number F33615-C-84-0059. The AFHRL Work Unit Number for the project is 2557-00-02. The primary office of responsibility for management of the work unit is the Air Force Human Resources Laboratory, Training Systems Division, and the Air Force AOTS manager is Major Jack Blackhurst.

1.0 DESCRIPTION

1.1 Mission

- 1.1.1 Introduction. The primary mission of the Advanced On-thejob Training System (AOTS) is to supply the Air Force with airmen who are position qualified within operational duty positions. meet the mission objective, AOTS must focus on-the-job training (OJT) on job task proficiency by specifying and defining the tasks required in a given duty position and by adequately defining the training required to become fully position qualified. AOTS must provide workable and cost effective methods for evaluating task performance in an operational setting. AOTS must also ease the inherent difficulties of using operational equip-It must address the problem of the limited ment for OJT. availability of technically qualified personnel who can act as trainers and the limited training skills of those personnel. AOTS must ease the paperwork burden associated with scheduling both expected and unique OJT opportunities, tracking trainee progress, evaluating associated knowledge test and task performance, and managing the flow of OJT data. It must ultimately increase individual and unit productivity and readiness.
- 1.1.2 Operational Concept. The prototype AOTS will demonstrate the management and evaluation functions for OJT in five Air Force Specialties (AFSs) within eight regular Air Force, five Reserve, and six Air National Guard (ANG) workcenters. AOTS will provide the capabilities and methodologies to:
 - a. identify and define task performance and training requirements
 - b. schedule training and identify evaluation resource requirements

- c. track individual aliman training accomplishments
- d. evaluate individual airman task knowledge and performance
- e. track, evaluate, and report the AOTS program effectiveness
- f. report airman training, evaluation status, and evaluation results to appropriate Air Force managers.

AOTS will primarily be a computer based system. Editors, data bases, and system utilities will be made available, either in whole or in part, to various Air Force users. These users will include: developers and managers of AOTS information such as ISD personnel and AOTS operators; end users of AOTS products such as trainees, trainers, and evaluators; and Air Force managers such as supervisors, base level commanders, Air Staff, etc. AOTS design incorporates the concepts of user friendliness, flexibility, and efficiency. The system support concept incorporates a formalized logistics plan for hardware, software, and personnel.

1.2 Key Functional Characteristics

- ----

- 1.2.1 <u>AOTS Management Subsystem.</u> The Management Subsystem provides computer based capabilities and methodologies to: identify Air Force Specialty and other training required to achieve position qualification within an assigned operational duty position; manage and record airman training progress toward task proficiency and position qualification within an operational duty position; schedule training and evaluations; and identify base level training and evaluation resource requirements.
- 1.2.2 AOTS Evaluation Subsystem. The Evaluation Subsystem

provides computer based capabilities and methodologies to:
nanage evaluation instrumentation including the planning and
development of objectives and tests; evaluate performance of airmen in both objective-based knowledge tests and performance
evaluations; provide standardized quality control evaluation procedures to the on-the-job training process; and evaluate the AOTS
system itself, providing trainee and system status reports to
different levels of Air Force management.

- 1.2.3 <u>AOTS Computer Support Subsystem.</u> The Computer Support Subsystem provides the computer based tools and capabilities to meet the objectives of the other subsystems. This subsystem provides the hardware and the software products such as editors, data bases, computational models, system utilities, and other computer support, as required.
- 1.2.4 <u>Key Functions.</u> AOTS will include functional capabilities to support the ongoing OJT for Air Force personnel. The key functions are:
 - a. Management of training requirements and OJT records
 - b. Development and delivery of evaluation objectives and instruments

- c. Evaluation of airmen's knowledge and performance
- d. Generation of reports documenting the AOTS system and trainee evaluation results.
- 1.2.5 <u>Interfaces.</u> As defined in the AOTS System Specification, the AOTS includes both external and internal interfaces. The Air Force has numerous centers, groups, offices, and data bases that maintain data vital to AOTS operation. These external offices and data bases are interfaced with the prototype AOTS through off line data gathering and subsequent on line input. After the system is internally integrated, the AOTS subsystems interface interactively to accomplish system requirements. However, the AOTS Test and Evaluation activities do not impose any special requirements on these interfaces.
- 1.2.6 Unique System Characteristics. Not applicable.

1.3 Key Technical Performance Characteristics.

The performance characteristics to be tested are listed in the Test Objectives for the various Test Plans in Appendix A. These characteristics derive from the Prime Item Development Specifications for each subsystem. Data to establish the reliability and maintainability of the prototype system will be collected in accordance with the AOTS Reliability Program Plan and Maintainability Program Plan.

1.3.1 Management Subsystem.

- a. Training requirements management
- b. Airman training management

1.3.2 Evaluation Subsystem.

Contraction of the

- a. Evaluation instrumentation management
- b. Performance evaluation
- c. Training quality control
- d. System evaluation

1.3.3 Personnel and Support Subsystem.

- a. Personnel support
- b. Logistics support
- c. Maintainability, reliability, and human factors

1.4 Formative and Summative Test and Evaluation*

Formative evaluation activities are conducted internally by the developers to determine the degree of attainment of specific program design goals and to pinpoint parts of the goals not yet achieved. Summative evaluation, on the other hand, is directed to a more general assessment of the degree to which broader program outcomes have been obtained over the entire program. The distinctions between the two types of evaluation can be explained in terms of timing, level of generalization, and the use of the information learned. Formative evaluation occurs during the "formative" or development stage of a program. Very specific information about individual program components is gathered to

^{*} Formative Evaluation and Summative Evaluation are not standard terminology for Air Force testing, but are standard in the literature on evaluation of training and training systems.

develop the kind of evidence that will be most useful to the developers in improving the program. The term summative evaluation is used to indicate the type of evaluation used after development for purposes of making judgments about the new program's worth. Certification of outcomes achieved or research on the effectiveness of the program (when compared to another) is the intent of the data collection and analysis activities.

The Formative Test and Evaluation (T&E) of AOTS during Phase II development will be primarily concerned with verifying attainment of technical performance specifications and objectives. This includes testing and evaluating subcomponents, components, interfaces, and subsystems of AOTS. Formative evaluation results can then be used to revise or modify the system elements so they perform at or above acceptable levels, and so that the integrated system will be functionally complete.

During Phase III, the implementation of the system, summative T&E will be accomplished. The results of the summative evaluation will be used to evaluate the AOTS, based on program outcomes achieved.

1.5 Critical Issues

THE WARRY COLOR

Following are four critical issues of overriding concern in assessing the success of AOTS. More global in relation to the functional integrity of the system, they relate to a system's overall capability and must be addressed in an evaluation of the system as a whole. Furthermore, they are of primary importance to the decision authority for AOTS.

1.5.1 <u>Critical Issua No. 1: Compliance.</u> Does the prototype AOTS meet the design and functional requirements of the System, Subsystem, and Component specifications?

- 1.5.2 <u>Critical Issue No. 2: Performance.</u> How does performance of the prototype AOTS compare with the conventional OJT system, and does AOTS meet the system performance standards?
- 1.5.3 <u>Critical Issue No. 3: Suitability.</u> Does the AOTS overcome currently defined deficiencies in the Air Force's OJT system, and can AOTS be used for OJT throughout the Air Force?
- 1.5.4 <u>Critical Issue No. 4: Acceptance.</u> Is AOTS accepted by the various system users as user friendly and easy to use?

2.0 MTP OVERVIFW

2.1 Approach

AND THE WAY

This Master Test Plan (MTP) describes the overall strategy that will be followed during T&E of the prototype AOTS. From an evaluative standpoint, the MTP is synonymous with program evaluation. Furthermore, it describes an "internal evaluation" which will be planned and conducted by the contractor, in conjunction with the Air Force, rather than an evaluator external to the project.

An effective evaluation program is typically designed as a continual process that remains in effect for the program's duration (see Figure 1). Ongoing feedback loops support continual revision and improvement of the program. Data are collected on a regular basis, testing and evaluation take place, and feedback to the program occurs. The program is then modified and the cycle repeats. The MTP must, therefore, be dynamic rather than static if it is to be effective. Note that the feedback loop from summative evaluation is weaker than that from formative evaluation, reflecting the different emphasis in these two types of evaluation.

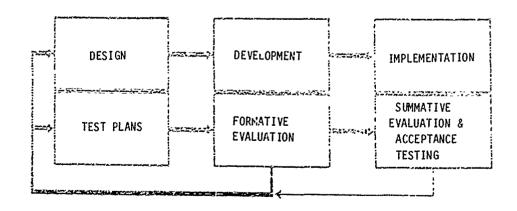

FIGURE 1. EVALUATION PROCESS

2.2 Formative and Summative Evaluation

A major function of the formative stage of evaluation activities is to enable the developers to examine, review, and rethink assumptions and designs that underlie the newly developed program components. This is to provide input to decisions involving alternative courses of actions and settle controversies about more effective ways to install the program. If the purpose of the evaluation is to advise the program planners and developers in the actual development of the program itself, a formative evaluation is in order. Evaluation activities are designed to gauge potential problems, identify areas where the program needs improvement, describe and monitor program activities, and periodically test progress or assess attitudes of the users.

The underlying purpose of the AOTS summative evaluation is to produce statements summarizing the program's accomplishments, and a summary statement about the effectiveness of the program, in a report to the Air Force. The following information will be reported:

- o description of the program
- o summary statements concerning program achievement of announced goals
- o descriptions of any unanticipated outcomes
- o as possible, comparisons with alternative programs

Since this report could affect important decisions about the program's future, the evaluations must be able to support the findings and conclusions. Although few field evaluations of program outcomes can or need to live up to the rigid standards of true scientific experiments, a critical characteristic of any

evaluation study is that it provides the best information that could be gathered under the circumstances, and that this information meets the credibility requirements of its review audience. The goal of the evaluator during summative evaluations is to provide findings about a program's effects that can be generalized to contexts other than the one currently under study. For this reason, use of a research design is typically associated with summative evaluations.

NO MANUEL

Formative evaluations are appropriate for testing and improving a prototype system; summative evaluation is appropriate in determining the worth of the system or when alternate systems are being compared following the debugging and program refinement It is not unusual, due to time and money constraints, for both types of evaluation to occur very close in time to the prototype implementation. The problem arising in this situation is the possibility that projections about program outcomes and effects based on early implementation data are premature and subject to high error. However, program sponsors and users need evidence on which to base their decisions. It is essential that evaluation audiences not attempt to use formative data for summative evaluation purposes. Summative evaluation of a program is appropriate only in an operational mode.

Formative and summative evaluation of AOTS will be as shown in Figure 2. Part 1 of the MTP, as implemented during Phase II, constitutes formative evaluation. Summative evaluation (System Level Test and Evaluation, SLT&E) of the prototype AOTS is accomplished in Phase III, as Part 2 of the MTP is implemented. The results of the SLT&E, submitted in a final report late in Phase III, will play a significant role in establishing whether or not the prototype AOTS adequately addresses the critical issues identified for AOTS. Note that the time distinction will not be quite this clear - some aspects of summative evaluation,

especially baseline data collection, will have to occur during Phase II.

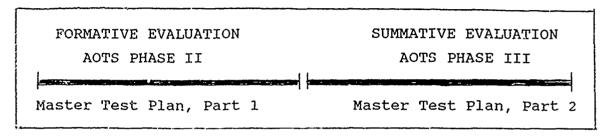

FIGURE 2. FORMATIVE AND SUMMATIVE EVALUATION OF AOTS

A first step in the formation of general plans for the testing and evaluation program for AOTS was the identification of each element of the AOTS program. These elements are initially defined at the subcomponent level. The subcomponents are, in turn, the elements of the components; the components are the elements of the subsystems; and the subsystems are the elements of the system. Because each subcomponent is an element, there will be as many elements at the component level as there are subcomponents and as many elements at the subsystem level as there are components, and so on. It is not feasible to work with the concept of an element existing at all these levels. An element defined and tested at the subcomponent level, for example, will "disappear" at the component level.

There must be a clear hierarchical structure in order to lead naturally to an evaluation at the integrated system level. This structure will help to keep the evaluation plan efficient and well organized. Test objectives that are considered critical at the subcomponent level may seem relatively insignificant when compared to the critical objectives identified at the subsystem or system level. Once an element is identified, requirements against it (the conditions it must meet) must be specified. The element's function in the system becomes the criterion by which

the performance of the element may be demonstrated or verified (i.e. what are the indications of the element functioning as planned?). These steps are strongly linked to the test objectives associated with each element. Success criteria, or levels of successful performance, will be the standard used to verify that the element has "passed" the test.

2.3 MTP Test Phases

many and of

Part 1 of the MTP defines the focus and order of the subcomponent, component, and subsystem levels of evaluation of the AOTS. It is the basis of the formative evaluation of the AOTS. The ongoing T&E of the basic elements of the system, as the subsystems are being developed during Phase II, will be both qualitative and quantitative in nature. Assessment of an element's satisfactory functioning may rely on subjective data, objective data, or both. Indications of less than satisfactory performance will be used to focus revision efforts on the elements of concern. Part 1 of the MTP principally addresses Compliance — do the elements of AOTS meet specifications (Critical Issue 1, as described in Section 1.5.1).

Questions to be answered by AOTS T&E are summarized in Figure 3. Basic evaluation questions are identified at the subcomponent, component, and subsystem levels of the AOTS.

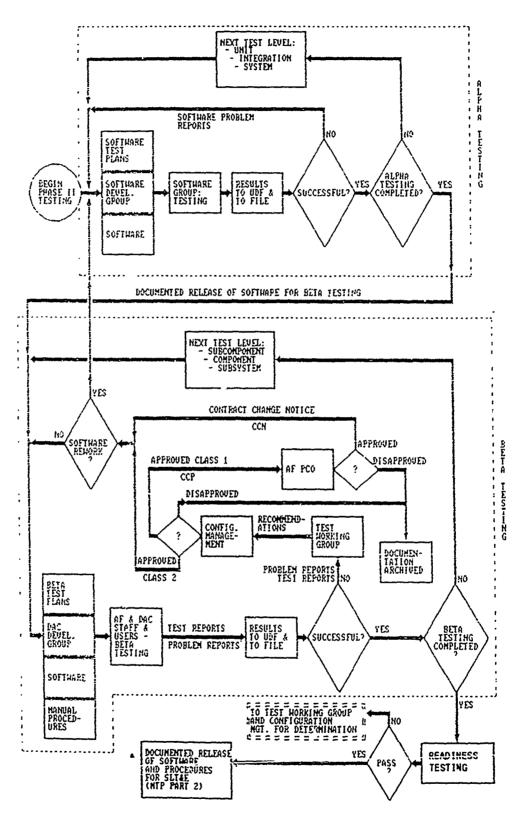

| LEVEL | QUESTION | CRITICAL ISSUE |

ARTICLE STATE

FIGURE 3. QUESTIONS AND LEVELS OF EVALUATION

During Part 1 of the MTP, alpha testing, beta testing, and readiness testing of the AOTS subcomponents, components, and subsystems will be accomplished (see Figure 4). Alpha, beta, and readiness testing are defined as follows:

- o <u>Alpha Testing</u>. Alpha testing is accomplished by the contractor's software development group to determine that the software does function properly on the AOTS hardware, and that together the hardware and software provide the functions required by the AOTS specifications. Alpha testing includes the Unit Tests, Integration Tests, and System Level Tests which are described in Appendix D (Software Test Plan). A software product will complete alpha testing before being released from the contractor's software development group.
- which begins after alpha testing of a software product is completed, and testing of off line products (processes and procedures). The products are inspected, and contractor and AF personnel (during Phase II, principally instructional design personnel) use and evaluate the products. Beta testing is in accordance with Appendix A (Part 1 Test Plans). A product is considered to be "in production" after beta testing is satisfactorily completed.
- o <u>Readiness Testing</u>. Testing near the end of Phase II to demonstrate to the Air Force that products are ready for use in Phase III. Readiness testing is the responsibility of Ball Systems Engineering Division.

PERSONAL PROPERTY.

FIGURE 4. FLOW OF TESTING DURING PHASE II

As shown in Figure 4, Phase II testing begins with the DAC Software Development Group. Software programs proceed through the three levels of alpha testing (Unit Testing, Integration Testing, and System Level Testing) in accordance with the Software Test Plan. Test results are filed in the software Unit Development Folders (UDFs), and test reports in the Test Report File which DAC will maintain at its location on Bergstrom AFB. The UDFs and Test Report File will be available for AF inspection at any time. If a problem is detected at any level of alpha testing, the software is reworked as necessary and alpha testing begins again. Software which successfully completes one level of alpha testing advances to the next level or, if alpha testing is completed, is released for beta testing.

Beta testing involves the DAC development staff, DAC and AF users of AOTS (principally instructional design and Instructional Systems Team (IST) personnel during Phase II), and DAC and AF experts serving as evaluators and inspectors. As testing proceeds in accordance with the Test Plans (Appendix A), test reports and problem reports (see Appendix B) are entered into DAC's Test Report File at Bergstrom AFB. Documentation on unsuccessful tests is referred to the AF/DAC Test Working Group (TWG) for consideration and recommendations. The TWG's recommendations enter into the Configuration Management process for classification as Class 1 or Class 2 change (as defined in the AOTS Configuration Management Plan) and for approval or disapproval. Approved Class 1 changes are forwarded as Contract Change Proposals to the AF Program Contracting Officer (PCO). If approved by the PCO, a Contract Change Notice (CCN) will result. If disapproved by the Air Force/DAC Configuration Control Board (CCB) or the PCO, the documentation is archived in the Test Report File. changes which do not require software change are referred to DAC's Development Group for rework and reentry into beta testing. Approved changes which do require software rework go to the DAC

1

Software Development Group, and then into new alpha testing. After a product completes a row ! of beta testing, it either enters into the next higher leve. of beta testing or continues in use in Phase II awaiting Readiness Testing.

A " 2 . 4" 0 2" 0

Readiness Testing occurs during the last two months of Phase II. Whereas alpha and beta testing are conducted and witnessed principally by DAC (although AF observation and participation is welcome), readiness testing will be observed by AF representatives (to be designated by the AFHRL Program Manager). Readiness testing is intended to demonstrate to the AF that the AOTS products are ready for use in Phase III System Level Test and Evaluation.

Part 2 of the MTP, developed and revised during Phase II and implemented during Phase III, defines the focus and order of the overall integrated system level evaluation of the AOTS; outlines the procedural guides for the summative evaluation stage; and provides procedures and schedules for data collection, data analysis, evaluation, and reporting so that overall performance of the integrated system can be assessed. Execution of Part 2 of the MTP will examine how well the AOTS prototype accomplishes its design goals and what benefits accrue from its implementation. Part 2 makes use of pretest/post-test comparisons and non-equivalent control groups in order to provide the required comparisons.

As indicated in Figure 1, the MTP may be revised and updated as DAC and the AF gain experience with the evaluation of the elements of the system. Some of the test objectives identified in the MTP, as well as some of the indicators of the elements' performance, may be found to be impractical or unnecessary. On the other hand, some unanticipated critical issues may emerge, or better indicators may be found.

2.4 The Criteria Acquisition Model

A classic, widely used model from the program evaluation literature provides a framework for evaluation of the AOTS program. The Criteria Acquisition Model* (CAM) supports systematic, comprehensive evaluation of a large scale system. The central notion of the model is that there are distinct evaluation stages in the life of a development product and it is possible to specify criteria that should be met before the product advances to the next stage. There are three basic facets of the CAM:

- the formal stages of the program are specified and described
- 2. che domains of the specific criteria that will be used as the basis for the evaluation are established
- 3. the various audiences for the evaluation are specified.

The CAM is usually depicted as a three dimensional matrix with one facet along each dimension. Each facet is broken down into several levels or categories. The model is quite general and very flexible. For example, depending on the stage of the program during which the evaluation takes place, different levels of emphasis may be placed on the criteria domains or the audiences because certain criteria or audiences are more important than others at certain stages. Each stage in the development/evaluation sequence represents a relatively easily identified milestone in the life of a project. Moreover, the entry of a test element into a given stage can be viewed as a decision point. If a test element lacks certain characteristics

^{*} Wright, W.J., & Hess, R.J. (1974), A criteria acquisition model for educational evaluation. In G.D. Borich (Ed.), Evaluating Educational Programs and Products. Englewood Cliffs, NJ: Educational Technology Publications.

or has failed to meet certain criteria required for entry into the next stage, revision may be indicated. Evaluative feedback will be provided at these milestones for Air Force review. It is the stages of development and evaluation that constitute the major milestones or decision points in the life of a product. According to the extent to which a product meets the criteria established for it at a given stage, it will be advanced or referenced to the contractor for change. Deciding how much weight is to be applied to any criterion is, of course, a product specific decision.

-

The three-dimensional CAM model tailored for use in the AOTS program evaluation is depicted in Figure 5. The stages and audiences should be self explanatory, and the criteria domains, listed below, are the critical issues identified in Section 1.5.

- 2.4.1 <u>Compliance.</u> Does the prototype AOTS meet the design and functional requirements of the System, Subsystem, and Component Specifications?
- 2.4.2 <u>Performance</u>. How does performance of the prototype ACTS compare with the conventional OJT system, and does AOTS meet the system performance standards?
- 2.4.3 <u>Suitability.</u> Does the AOTS overcome currently defined deficiencies in the Air Force's OJT system, and can AOTS be used for OJT throughout the Air Force?
- 2.4.4 <u>Acceptance.</u> Is AOTS perceived by the various system users as easy to use and user friendly?

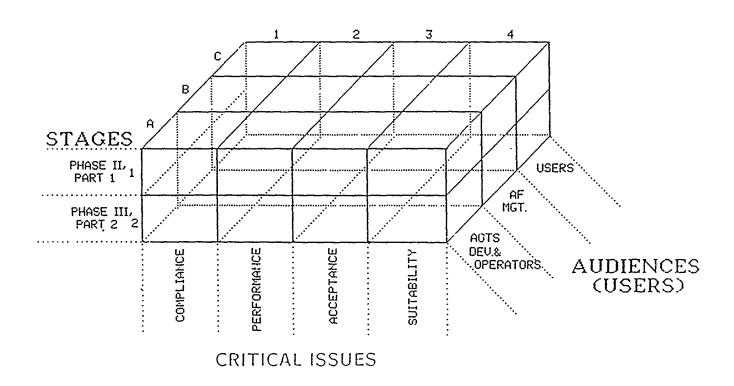

FIGURE 5. THE CAM MODEL

2.5 <u>Definitions and Descriptions of the Basic Assessment Process.</u>
Processes identified in the requirements specifications for the MTP for assessing the performance of the system elements are: testing, measurement, analysis, demonstration, evaluation, inspection, and reporting. Interpreting how these assessment process terms can be implemented in practice, the seven processes can be collapsed into the four basic assessment processes that are being required in the MTP. The seven processes are as follows.

<u>Inspection.</u> This term refers to the examination of a system or an element of the system by visual means, and implies the physical presence of an observer (i.e., the inspector). Inspection also implies standards against which the element or system is to be compared.

Analysis. This process refers to breaking down a system into its component parts, and usually requires that an examination be conducted of the system, its component parts, and the interrelations among the parts in forming the whole. Analysis is often necessary in trouble shooting a system to identify the component causing problems so that the faulty component can be corrected. Data analysis is a specific technique involving descriptive and/or inferential statistics to describe, summarize, predict, or evaluate some system or measures of system performance. Thus, analysis often connotes analysis, gathering, and interpretation of data.

Test. A test is basically a procedure conducted to determine whether some element works. That is, does the element function as it was designed to function? The result of the test is usually a dichotomous decision (e.g., yes or no), but the test may also produce quantitative measures. In all cases, the test determines whether the element conforms to the requirements or performance characteristics specified for it.

Evaluation. This term refers to the process by which value judgments or decisions are made through the use of a variety of evidence including tests, measures, demonstrations, inspections, Evaluation requires both qualitative and quantitative interpretation of the cumulative weight of evidence to determine the worth or value of a system. Evaluation usually takes place in a less controlled environment than tests or measurements, such as rield evaluations. Evaluation also implies some standards of performance to be met, a set of criteria to decide if the standard has been exceeded, and often includes comparisons of the system being evaluated with alternate systems. Finally, evaluation typically involves the descriptive or inferential statistical analysis of individual or composite measures of system performance.

-

Measurement. Measurement involves the assignment of numbers (quantitative values that indicate magnitude, amount, quantity, etc.) to objects, events, systems, or persons according to some rule. In the measurement of physical characteristics such as height or weight, the quantification rules have been agreed upon and standardized so that everyone knows the procedures to be followed. In other contexts, however, the rule will usually have to be specified in greater detail. It is important to remember that what is measured are the attributes, traits, or characteristics of the objects, events, or systems, not the objects, events, or systems themselves. For example, the efficiency, the user friendliness, the costs, the reliability, and the frequency of use of a system are all attributes that might be measured.

<u>Demonstration</u>. This term refers to the process of showing some aspect, attribute, or property of a system. The merits, capabilities, capacities, and/or performance levels of a system are displayed or illustrated to prove its effectiveness. This

overt display may involve the use of simulations, explanations, or examples to make the demonstration convincing.

<u>Reporting.</u> Reporting is the effective communication of evaluation results to the audiences requiring the information. Reports may be verbal or written.

Given these definitions, it follows that the process of measurement is always a part of testing and analysis; reporting (communicating evaluation results) is a part of the general evaluation process; and demonstration may be viewed as a procedural step within evaluation. The four remaining processes, invoked by the Part 1 Test Procedures, are Inspection, Analysis, Test, and Evaluation. The operational definitions and representative tools and analyses associated with each are shown in Figure 6.

2.6 Organization and Responsibilities.

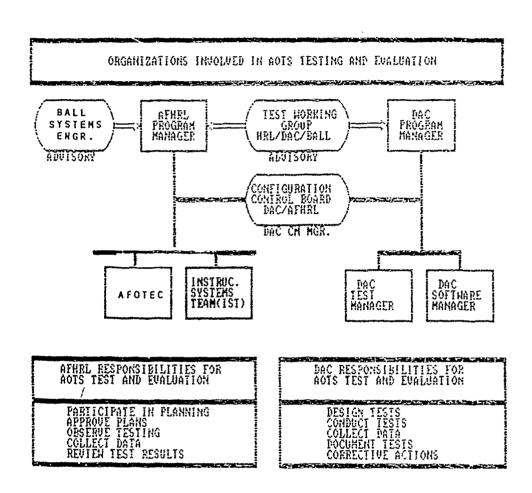

Organizations involved in AOTS T&E, and their responsibilities, are as shown in Figure 7.

2.6.1 <u>DAC Responsibilities.</u> DAC is principally responsible for designing, conducting, and documenting the tests and evaluations, and for taking necessary corrective actions. Under the DAC Program Manager, the DAC Test Manager has overall responsibility for all T&E activities described in this MTP. The DAC Software Manager has principal responsibility for corrective actions on software products. The DAC Manager of Configuration Management, and the joint AF/DAC CCB, will be involved in any changes which arise from T&E and which impact a product under configuration control.

| LEVEL OF | | CONDITIONS | | |
|---------------------|--|---|---|--|
| TEST/ EVALUATION | TYPE OF TEST | OF TEST | CRITERION MEASURE | TOOLS/ANALYSES |
| Inspection | Visual examination or equivalent | Controlled or uncontrolled | performance by expert | Checklist. Rating scale. Item by item adherence or composite score with equal or varying weights applied. |
| Analysis | Descriptive data gathering, and interpretation techniques | Controlled or uncontrolled | | Attitude scale Questionnaire Ped. measures - opinion or pedormance data collection and descriptive data analysis; summary of composite values "a profile". |
| Tést | Specified inputs, outputs, and data analysis methods | Controlled | composite measures to a specified probability level | as conforming to re- quirements specified for |
| Evaluation | Specified inputs, outputs, and data analysis methods: o variation of input and determination of differential outputs and consequences o descriptive or statistical treatment of individual or composite data measures. demonstration: act of proving/illustrating worth of x; providing evidence evaluation: process by which value judgements are made based on a variety of evidence: to ascertain or fix a value or worth | uncontrolled (usually less controlled, e.g. field evaluations) | o composite | Quantitative and qualitative interpretation of cumulative weight of evidence, and judgment as to whether or not standards of performance have been met or exceeded; may include comparisons with alternate systems, judgements |

FIGURE 6. OPERATIONAL DEFINITIONS, TOOLS, AND ANALYSES

The state of the s

FIGURE 7. ORGANIZATION AND RESPONSIBILITIES

2.6.2 <u>AFHRL Responsibilities.</u> AFHRL participates in planning and approves plans for T&E, observes testing, and reviews test results. AFHRL's Instructional Systems Team and Concepts and Analysis Branch, other AF personnel and organizations including the Air Force Operational Test and Evaluation Center (AFOTEC), and Ball Systems Engineering will be involved in the T&E activities as the AFHRL Program Manager may direct.

ATTE STORY

- 2.6.3 Test Working Group. The purpose of the Test Working Group (TWG) is to provide a forum for continuous interchange on test related issues among organizations involved in the test and evaluation planning process. The TWG, chaired by the DAC Test Manager, will advise the DAC and AFHRL Program Managers on all significant test matters. The TWG will operate throughout the period of AOTS Test and Evaluation.
- 2.6.3.1 <u>TWG Responsibilities</u>. Responsibilities of the TWG are summarized below. These responsibilities will be revised or expanded as program requirements may dictate.
 - a. Review and comment on formative and summative test objectives, test evaluation criteria baselines, T&E organizational responsibilities, and test documentation requirements.
 - b. Review and comment on policy and plans for major test milestones.
 - c. Review and comment on test plans to determine that test objectives and requirements are addressed.
 - d. Review and comment on the Master Test Plan (AFHRL as the procuring agency has responsibility and authority for approval).

- e. Identify test support requirements to appropriate organizations, and recommend alternate test methods or objectives when specific test resources are not available.
- f. Maintain current knowledge of the critical T&E issues, test objectives, progress toward attainment, and resolution of deficient areas. In cases requiring interpretation of requirements and/or results, the TWG will make recommendations to DAC and HRL management and to the CCB.
- g. Review program redirection and the effects on current T&E costs, performance, schedule, and resource estimates.
- 2.6.3.2 TWG Membership. The TWG will consist of designated focal points from each participating organization, as follows:
 - a. Chairperson: DAC Test Manager
 - b. Vice chairperson: DAC Program Manager
 - c. Permanent Members:
 - AFHRL Program Management Representative (1)
 - IST Representatives (2)
 - DAC Representatives (2)
 - Ball Systems Engineering Representative (1)
 - d. Special Advisors: From time to time the TWG Chairperson may request other individuals to assist with or participate in the group's activities. These persons will not be considered permanent TWG members.

2.6.3.3 TWG Procedures.

Mary States Silver

- a. Meetings of the TWG will be held quarterly, at Bergstrom AFB locations and at times to be determined by the Chairperson. Insofar as possible, meetings will be scheduled when a majority of TWG members will be available. Any permanent TWG member may request a meeting to discuss, plan, and resolve T&E issues.
- b. Meeting minutes will be distributed to members of the TWG and to DAC and AFHRL program management within 10 days after each meeting. Minutes will outline the meeting objectives, the major results, action items, and recommendations made by the group. The Chairperson will appoint a recorder for each session.
- c. Documents requiring TWG action will be provided to the members sufficiently in advance of a meeting to allow adequate review time.

3.0 MTP PART 1: PHASE II TEST AND EVALUATION

3.1 Introduction

**

As described above, T&E activities for Part 1 of the MTP are formative in nature. The principal objective for Part 1 is to test each subcomponent, component, and subsystem of AOTS for adherence to functional requirements and for acceptability. The performance characteristics and functions identified in system and subsystem specifications become the testing objectives for subcomponents, components, and subsystems.

3.2 Formative Level Test Objectives

Part 1 of the MTP, formative evaluation of AOTS, is an ongoing qualitative and quantitative assessment while subsystems are being developed. Each element of the system (i.e., subcomponent, component, and subsystem) is identified here. The requirements for each element to be tested are stated. In some cases, the requirements are qualitative, e.g., "an element shall include X, Y, and Z," and in some cases are quantitative, e.g., "the element shall perform its function with 98% accuracy." Testing procedures and instruments will be unique for each test. Refer to Appendix A, the individual test plans for each element identified in the T&E plans, for specific test objectives, evaluation questions, and methods of evaluation. General descriptions of procedural guides to be developed for test activities are contained in Appendix B.

3.3 Order of Testing.

Refer to Appendix G of this document for the testing milestones and the order in which tests of the system elements will be performed. Beta testing of an element will not begin until the associated alpha testing of that element has been completed.

Since AOTS hardware will be purchased off the shelf, hardware testing will be done using hardware tests supplied by

the manufacturer. There will, therefore, be no AOTS unique hardware tests. In all cases, specific hardware tests will be conducted prior to initiating MTP test activities whose results might be constrained by the operation of that hardware. Details of hardware testing procedures are contained in Specifications 70S647401 and 70S647402. Software required to support an MTP beta test activity will complete alpha testing prior to beginning the MTP beta test activities. Specific details of software testing procedures (alpha testing) are documented in the Software Test Plan, Appendix D of this MTP.

Whenever, during MTP testing, a problem or deficiency is noted and the cause is not apparent, both hardware and software will be considered as possible contributors. If problems with hardware are found and the solution is outside the manufacturer's stated capabilities for said hardware, then the Air Force will be consulted for mutual resolution. If the problem is related to software, the programmers will review the problem, and keep the Air Force appraised of the proposed resolution.

4.0 MTP PART 2: SYSTEM LEVEL TEST AND EVALUATION

The Air Force Human Resources Laboratory (AFHRL) has been tasked to design, develop, and test a prototype Advanced On-the-job Training System for Air Force On-the-Job Training (OJT). The prototype system is to be demonstrated and evaluated in an operational environment. Four Air Force Specialties (AFSs) have been selected to participate in this effort. These are 426X2, Jet Engine Maintenance; 431X1, Aircraft Maintenance; 732X0, Personnel; and 811XX, Security Police. All Air Force components (Active, Reserve, and Guard) will participate in this effort. Bergstrom AFB, TX has been selected as the site at which the Active and Reserve Forces will participate, and Ellington ANGB, TX is the site selected for the Guard Forces. The workcenters involved, by AFS at each site, are listed in Appendix E.

The McDonnell Douglas Corporation was awarded a contract for developing the prototype AO'S in August 1985. Time for the effort is four years; August 1985 - July 1989. The effort is divided into three phases: Phase I for preliminary design of the prototype system; Phase II for detailed design and development; and Phase III for implementation, demonstration, and System Level Test and Evaluation (SLT&E).

This Part 2 of the Master Test Plan (MTP) outlines the requirements to be met during the SLT&E. Included are test plans for the critical issues of Compliance, Performance, Suitability and Acceptance; surveys to be completed by the Air Force users; and the SLT&E time schedules.

4.1 Background and Authority

4.1.1 <u>System.</u> The AOTS grew out of an Air Staff-directed functional management inspection of the Air Force OJT program in the late 1970s. The inspection found a number of problems and summarized the current system as being labor- and paper-intensive

and having limited use of automation, which is focused on record keeping instead of training and readiness. The Air Staff directed a study of possible solutions. One was an initial plan for an automated unit-level training system that eventually became AOTS.

- Acquisition Program. The Air Force Systems Command was directed (RPR 80-03, PMD 2029, most recent update 9 Oct 86) to design, develop, and test a prototype for a job-site training The system was to address training concerns such as responsiveness, standardizing instruction and evaluation, training proficiency, and applying computer-based training delivery and management. Air Force Systems Command assigned the Air Force Human Resources Laboratory (AFHRL) Training Systems Division to In 1985, AFHRL contracted with McDonnell Douglas do the work. Corporation's Douglas Aircraft Company (DAC) for a 4-year program to design, develop, test and evaluate the prototype AOTS. I, preliminary design, was completed in May 1986; Phase II, detailed design and development, will be completed in July 1988; and Phase III, implementation of the prototype, will begin in August 1988. System Level Test and Evaluation (SLT&E) will begin in August 1988 and will be concluded in July 1989.
- 4.1.3 <u>Test Program.</u> The Air Staff sponsor for the project, HQ USAF/DPP, directed that the AOTS prototype be developed and evaluated within an operational environment to ensure that the system is useful and acceptable to the noncommissioned officer (NCO) force. CONUS MAJCOMs recommended and AFHRL assessed a set of bases. HQ USAF/DPP selected Bergstrom AFB, Texas, using criteria which included the following:

- (a) a representative flying mission
- (b) total force units (active Air Force, Air Force Reserve, and Air National Guard) in close proximity
- (c) all units of the total force components fly the same weapon system; and
- (d) stable weapon system

and affection (

The prototype will be implemented and evaluated in work centers of the following units:

| Component | Unit | Weapon System |
|--------------------|--------------------|---------------|
| Active Air Force | 67 TRW | RF-4C |
| | Bergstrom AFB, TX | |
| Air Force Reserve | 924 TFG | F-4D |
| | Bergstrom AFB, TX | |
| Air National Guard | 147 FIG | F-4D |
| | Ellington ANGB, TX | |

Before the start of Phase III, DAC will conduct alpha and beta testing. The Air Force will conduct readiness testing (MTP Part 1) to ensure that the AOTS works before it is placed in the operational workcenters.

The AFSs participating in the AOTS prototype were selected for a number of reasons, including (a) they are large (together they include approximately 20% of the enlisted force); (b) they represent a wide range of job types; and (c) the OJT for each is somewhat different. Together they should provide a realistic test of the usefulness of the AOTS. Also, the functional areas including each of these specialties have either an existing or

planned automation system (CAMS, MMICS, PC-III, and SPAS). This offers an opportunity to integrate AOTS and these representative automation systems.

4.1.4 Program Documentation.

- 1. AFHRL-TP-83-54, Integrated Training System for Air Force On-the-job Training: Specification Development. March 1984.
- 2. AOTS Statement of Work. 16 April 1984.
- 3. Program Management Directive (PMD) 2029. 9 October 1986.
- 4. Memorandum of Agreement (MOA) Between AFHRL/HQ AMD and HQ TAC, HQ ATC, HQ Air University, ANG, AFRES, AFMPC, AFOSP, AF/MPPT, and AF/LEYM. July 1984.

4.2 SLT&E Description

- 4.2.1 <u>Purposes.</u> Four major evaluation areas (critical issues) are to be addressed during SLT&E: Compliance, Performance, Suitability, and Acceptance. The purposes of the SLT&E are to show that DAC meets the conditions of the contract and specifications (Compliance), and to evaluate the AOTS in the operational environment by comparing it to existing OJT and discovering any problems or deficiencies with AOTS (Performance, Acceptance, and Suitability).
- 4.2.2 Approach. The elements of the system that will be tested and evaluated will depend on the evaluation area being addressed. Also, the target groups to participate in the test and evaluation and the methods for gathering data will vary depending on the element being tested or evaluated. Target

groups refer to: the Instructional Systems Team (IST), both Air Force and Douglas Aircraft Company members; the supervisors, trainers, trainees and evaluators assigned to the applicable work centers; and commanders and training managers. The methods to be used for gathering data include interviews, surveys, and collection of statistical data.

Interview and survey instruments, and procedures for administration, are contained in Appendix J.

The test plans which follow (Appendix E) include, in matrix format for each evaluation area, the following information:

- 1) the critical questions and subquestions to be addressed for each critical issue
- 2) the method or methods to be used for measurement for each subquestion,
- 3) the data to be collected and the target groups to participate
- 4) how data will be collected

A. 15. 1

- 5) how data will be analyzed
- 6) how the results of analyses will be evaluated
- 7) how the results of data analysis and evaluation will be reported, and
- 8) the elements being tested.

During SLT&E, DAC will cooperate with base OJT managers to keep them aware of activities and to include them in the coor-

dination loop with ACTS activities. AOTS will support scheduling of FTD courses through the MAT. MAT training managers will be asked to complete questionnaires during SLT&E to respond to critical issues of Acceptance and Suitability.

4.3 Program Schedules and Milestones

The milestones associated with SLT&E are shown in Appendix G of this MTP. Appendix G also contains flowcharts showing the order in which interviews, surveys, data collection, analysis, evaluation, and reporting will occur, and the timelines for each.

4.4 System Description

The AOTS is a computer-based system that will administer, evaluate, track, and manage OJT. Refer to MTP Part 1, Sections 1.0--1.3.3 for a more detailed description.

The test hardware for Phase III will include Zenith Z-248 Personal Computers; a VAX 8600 mainframe computer located at Brooks AFB in San Antonio, Texas; a 56KB high-speed communications line between Brooks AFB and Bergstrom AFB; printers; optical mark readers; digitizing tablets; and other associated equipment necessary for AOTS operation. During SLT&E, the system will be maintained in accordance with the AOTS Maintenance Plan.

4.5 Scope and Limiting Factors

4.5.1 <u>Locations</u>. This test will be conducted in workcenters at Bergstrom AFB and Ellington ANGB. The following specific locations will be used:

1. Bergstrom AFB

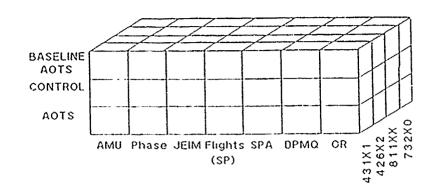

a. Jet Engine Maintenance WorkcentersActive - Bldgs 1612 and 4529; Reserves - Bldg 4589

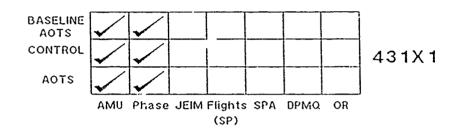

- b. Aircraft Maintenance WorkcentersActive Bldgs 1609 and 4529; Reserves Bldg 4515
- c. Personnel Workcenters
 Active Bldg 2202; Reserves Bldg 4555
- d. Security Police Workcenters
 Active Bldgs 207 and 208; Reserves Bldg 4204
- e. AFHRL/OL-AK Program Management Trailer T-1
- f. AFHRL/OL-AK Instructional Systems Team Bldg 1808
- g. DAC Management and Programming Bldg 428
- h. Chiefs of Maintenance Training Staffs Active - Bldg 1501; Reserve - Bldg 4592
- 2. Brooks AFB
 - a. Base Information Processing Center (VAX 8600) Bldg 578
- 3. Ellington ANGB
 - a. Jet Engine Maintenance Workcenters
 Bldg 1290
 - b. Aircraft Maintenance Workcenters Bldq 1382
 - c. Personnel Workcenters Bldgs 1057 and 1382

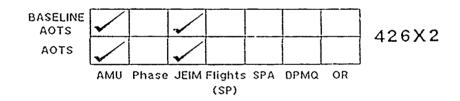

- d. Security Police Workcenters Bldg 1193
- 4.5.2 <u>Personnel Requirements.</u> Conducting this test will require participation of the following personnel:
 - 1. AFHRL personnel, including IST members, at Bergstrom AFB
 - 2. Workcenter personnel (AOTS and control groups) at Bergstrom AFB and Ellington ANGB (Figures 8, 9, and 10 further illustrate the participation of each group.)
 - 3. DAC Employees at Bergstrom AFB

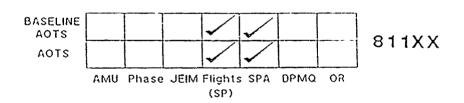

. Estimates of the time required from AF personnel for SLT&E activities are included in the test plans in Appendix E.

Limiting Factors. Planning for SLT&E of AOTS is influenced strongly by a variety of practical constraints and limitations. The major factor is that the nature of the implementation of AOTS, as a small scale prototype, dictates that a "field research" approach be taken. The evaluation will take place in the operational Air Force environment, precluding the possibility of a more controlled laboratory or experimental approach (along with the advantages and benefits of such evaluation The objective is to accomplish the best possible evaluation of AOTS within the constraints imposed by the operational environment. The Master Test Plan therefore adopts quasiexperimental designs for use in SLT&E (cf. Campbell & Stanley, Experimental and Quasi-Experimental Designs for Research, McNally, 1966). As indicated in the Test Plans (Appendix E), nonequivalent control group designs will be used where appropriate control groups exist at Bergstrom AFB. Where suitable control groups are lacking, time series designs will be used to compare the pre-AOTS baseline with AOTS.

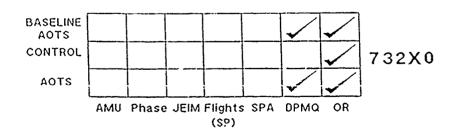

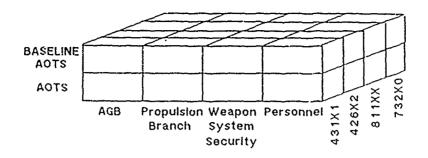

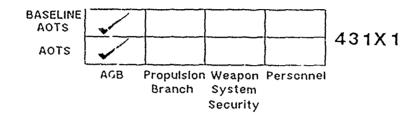

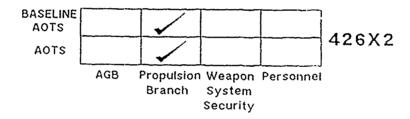

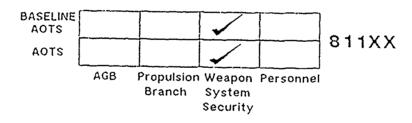

FIGURE 8. ACTIVE AIR FORCE PARTICIPATION IN AOTS SLT&E

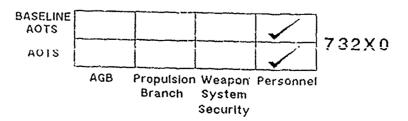

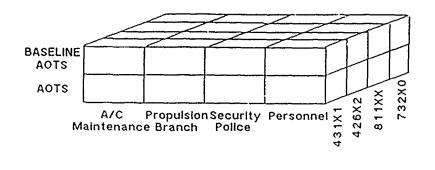

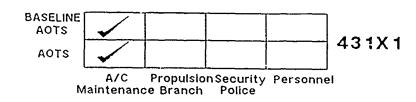

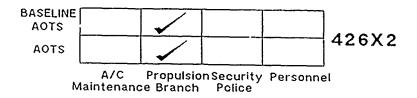

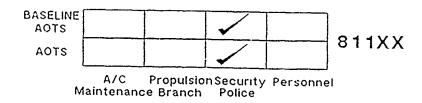

FIGURE 9. AIR FORCE RESERVE PARTICIPATION IN AOTS SLT&E

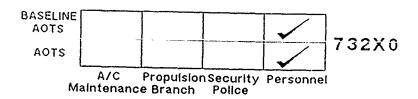

FIGURE 10. AIR NATIONAL GUARD PARTICIPATION IN AOTS SLT&E

Any consideration of the features and design of the MTP needs to bear in mind the restrictive conditions under which testing will have to be conducted. The major limitations on the MTP are summarized below, in approximate order of importance or impact on the SLT&E.

Lack of Randomization - The AOTS prototype will be implemented in only a few workcenters, for four Air Force Specialties, at two bases. Bergstrom AFB and Ellington ANGB were not selected randomly, nor were the four AFSs or the weakcenters selected randomly from among all AFSs or workcenters. Furthermore, subjects to be studied in Personnel, Security Police, Jet Engine Maintenance, and Aircraft Maintenance workcenters comprise convenience samples, self-selected to some degree, rather than random samples. It will not be possible to assign airmen to treatment conditions randomly. Instead, intact workcenters will be measured during a baseline period prior to the installation of AOTS; again during the implementation of the AOTS prototype; and The lack of random selection and assignment in control groups. of subjects eliminates the possibility of conducting any type of true experimental design.

Control Groups - There are practical considerations which limit the availability and use, at Bergstrom AFB, of control groups of non-AOTS participants. In the case of Jet Engine Intermediate Maintenance, the only such workcenter at Bergstrom AFB will be under AOTS. In other cases, even though there may be similar workcenters at Bergstrom, duties differ considerably. Also, personnel may be transferred from one workcenter to another during the course of AOTS, thus confounding the groups.

Practical considerations and costs limit the usefulness of control groups from AFBs other than Bergstrom. Such groups need to come from an AFB similar in size and functions - same type, number, and configuration of weapon systems, same positions and

tasks, similar environment and geographic location, etc. The near certainty of marked differences in these respects from AOTS workcenters at Bergstrom AFB argues against this approach.

Non-independence of Groups - Because all of the active and reserve personnel participating in AOTS are located at Bergstrom AFB (and all of the Air National Guard personnel are at Ellington ANGB) substantial interaction among personnel is inevitable. Airmen will talk among themselves both within and across workcenters about the AOTS prototype - its features, what they like and dislike, etc. In cases where we identify and use a nonequivalent control group, interactions among airmen from AOTS and control group workcenters will occur, and airmen may be transferred between AOTS and control group workcenters. All of these factors will contaminate the treatment groups.

nal validity - The MTP is vulnerable to several internal validity concerns. First, there is always the possibility that changes external to the ACTS program could account for any differences from pre- to post-AOTS. As an extreme example, the F-4s might be replaced with another aircraft. Vulnerability to such changes is high, because of the length of time during which the baseline and treatment take place and because of the high priority which must be accorded to operational considerations in the workcenters. Another problem is that people themselves change over time, irrespective of the AOTS program in which they may be participating. Any observed effects after imple intation of AOTS could be due to natural maturation of the proposed rather than to AOTS per se.

Treatment Period - Officially, the AOTS program is to be implemented for a test period (Phase III) of one year. However, workcenter personnel—will require at least a month to "come up to speed" in using AOTS, and data analysis, evaluation, interpretation, and reporting will take at least two months at the end of

the period. Thus the time period during which the AOTS can make its impact on the test results will be, at most, nine months. During this nine months, only a few airmen will move from entry into a position to full position qualification. Most airmen will already be fully or partly position qualified when the AOTS program begins, compounding the difficulty of demonstrating the effects of AOTS training. Again, these problems prevent any "pure" assessment of the effectiveness of AOTS.

Instrumentation - Due to practical considerations (including the need to keep interference with normal Air Force operations at a minimum while evaluating AOTS) and costs, it will generally not be feasible to develop and use new instruments or to design new variables for measuring the effectiveness of AOTS. Instead, the evaluation will have to rely mostly on existing sources of data, including variables currently measured in each AFS, as well as existing data bases. Where new instruments are developed (e.g., questionnaires and structured interviews), it will not be possible to pilot test them extensively to refine their psychometric properties and ensure their reliability and validity.

Samples - The number of personnel in the AOTS and control group workcenters at Bergstrom AFB and Ellington ANGB is another limitation. The workcenters are quite small and are unequal in size, ranging from 1 to about 50 airmen. Sample sizes for analyses are further reduced below the number in the workcenters by fractionation into supervisors, trainers, and trainees. These problems lead to ε lack of power in statistical hypothesis testing and to unbalanced designs for data analysis.

External Validity - The mere act of measuring personnel may sensitize them to what is being measured and to what is expected, or may motivate them to improve their performance. Data collection will necessarily have to take place in AOTS workcenters

during the baseline period before AOTS is implemented, after AOTS implementation, and in control groups. Workcenter personnel will be responding to questionnaires and participating in interviews. The reactive effects of these experiences can cloud attempts to measure the impact of the AOTS program. Finally, because the AOTS prototype is being tested on a small scale in five AFSs at one AFB for active and reserve and one ANGB for Guard, the validity of generalizing the results of the evaluation to other AFSs or to other bases will be very questionable.

4.6 Management

4.6.1 <u>Test Management</u>. The responsibilities of principal participants in the SLT&E of the AOTS are shown in Figure 11. The principal participants are as follows.

- A. AFHRL
- B. DAC
- C. Ball Systems Engineering

R

Other participants to be involved in the SLT&E of the AOTS in either advisory or coordinating roles include the following.

4.6.2 AOTS Program Management

The state of the state of

- A. Air Force Program Manager--Major Jack L. Blackhurst
- B. PEM-Major Glen Tanner
- C. SYSTO--Captain Frank Vaccaro
- D. DAC Program Manager--Mr. D. Brooks

4.7 Training Requirements

- 4.7.1 <u>Test Team Training</u>. DAC, with AF members of the test team, will collect SLT&E data and will enter data into the AOTS test data base. Training times are included within the estimates in Appendices E and H. DAC will provide demonstrations and overthe-shoulder training for test team members in the procedures for:
 - Interviewing
 - Administering questionnaires
 - Collecting other data for performance and suitability
 - Entering data into the test data base
- 4.7.2 <u>SLT&E Requirements for Training Workcenter Personnel.</u>
 SLT&E will impose very few special requirements for training workcenter personnel. Principally, personnel in workcenters will need to learn how to complete such SLT&E forms as weekly time sheets. The test team will provide this training as they carry out the test procedures provided by DAC.

4.8 Environmental Impact

Not Applicable.

4.9 <u>Safety</u>

No special safety requirements are imposed as a result of SLT&E activities.

4.10 Security

All portions of this test plan and of the AOTS program are unclassified.

4.11 Release of Information

No restrictions except as imposed on DAC by the AOTS contract.

4.12 <u>Intelligence Threat</u>

Not Applicable.

INTRODUCTION

The following Test Plans reference sections of the AOTS B1 Specifications (in the versions current as of 7 Nov 1986) and the Software Test Plan (STP) (Appendix D to this Master Test Plan).

Each Test Plan identifies what is being tested by naming the subsystem, the paragraph(s) in the associated Prime Item (B1) specification, and the name of the element (subsystem, component, or subcomponent). The Test Objectives identify the functions being tested, indicating whether each is an off line (manual) or on line (automated) function and giving a description abstracted from the referenced specification paragraphs. After the statement of the Test Objectives, the evaluation questions are listed. Each evaluation question is keyed to one or more of the Critical Issues which are described in MTP paragraphs 1.5.1 through 1.5.4 (respectively Compliance, Performance, Suitability, and Acceptance) of this Master Test Plan. For example, "CI 1, 3" attached to an Evaluation Question indicates the question addresses Critical Issues 1 and 3, Compliance and Suitability.

Each evaluation question is addressed, by number, under each of the following sections of a Test Plan:

<u>Level of T&E Required</u> - Whether the question requires Test (T), Inspection (I), Analysis (A), and/or Evaluation (E).

<u>Scheduled Test Date</u> - Time period for test, referencing the Master Test Plan Schedule (Appendix G of the MTP).

Resources/Facilities Requirements - Who (DAC staff, DAC/IST experts, DAC/AF inspectors, IST) and what facilities are involved in the test.

Evaluation Instruments Requirements - Inspection Review Form,
Problem Report, or User Survey (see samples in Appendix B).

Baseline Data Collection Requirements - Not applicable for
MTP Part 1 testing.

<u>Test Data Collection Requirements</u> - Sources of test data. <u>Data Analysis Requirements</u> - General type of analysis to be performed.

Test Criteria Goals - Intended goals of the testing.

During alpha and readiness testing, inputs and expected results will be as described in the Software Test Plan. During beta testing, inputs will be real data encountered in the course of implementing and using the prototype AOTS. Expected results are stated in the Test Criteria Goals for each Test Plan.

"Expert judgment" is judgment by one or more subject matter experts (designated as described in Appendix B) that the product observed or evidence gathered demonstrates compliance to Specification requirements.

"Go-no go" is the determination, under the procedures of the Software Test Plan, that a software product is ready to advance to the next stage of testing or development ('go') or needs rework before advancing ('no go').

TEST PLAN

SUBSYSTEM: MANAGEMENT

 B_1 SPEC REQUIREMENT REFERENCE NO.: 3.7

TEST ELEMENT: Management Subsystem

TEST OBJECTIVE(S):

- 1. The Management Subsystem shall be compatible and interactive within its own components.
- 2. The Management Subsystem shall provide the capability for the user to identify all AFS training required to achieve position qualification.
- 3. The Management Subsystem shall provide the capability for the user to manage and record training progress toward task proficiency and position qualification.
- 4. The Management Subsystem shall provide the capability for the user to schedule training efficiently and effectively.
- 5. The Management Subsystem shall maintain proficiency/performance data at the job task level.
- 6. The Management Subsystem shall be compatible and interactive with the other AOTS subsystems.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-1

1. Do the subcomponents interact effectively?

CI-1

2-6. Do the on-line capabilities, manual tools, and procedures established in the Management Subsystem satisfy the AF requirements for AOTS?

CI-1

7. Does the subsystem interact effectively with other AOTS subsystems?

LEVEL OF T&E REQUIRED:

- 1, 7. T see Software Test Plan for details on integration testing within the Management Subsystem, and between Management Subsystem and other AOTS Subsystems, and external interfaces with Air Force.
- 2-6. E expert judgment based on summary data from lower level evaluations.

SCHEDULED TEST DATE:

and surveying the same

- 1, 7. Alpha Test immediately following software development; see schedule, Appendix G.
- 2-6. Review completed within 10 days following development; see schedule, Appendix G.

RESOURCES/FACILITIES REQUIREMENTS:

- 1, 7. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data.
- 2-6. DAC/AF experts in Buildings 1808 and 428.

EVALUATION INSTRUMENTS REQUIREMENTS:

- 1, 7. Software Alpha Test procedures.
- 2-6. Inspector Review Form.

BASELINE DATA COLLECTION REQUIREMENTS:

N/A

TEST DATA COLLECTION REQUIREMENTS:

- 1, 7. Software Alpha Test procedures.
- 2-6. DAC/AF expert(s) review of plans, products, and records.

DATA ANALYSIS REQUIREMENTS:

- 1, 7. Analysis of Alpha Test results.
- 2-6. Descriptive judgments.

TEST CRITERIA GOALS:

- 1, 7. Go/No Go Status.
- 2-6. Expert judgment that product(s) satisfies requirements.

| SUBSYSTEM: MANAGEMENT | |
|--|--|
| B ₁ SPEC REQUIREMENT REFERENCE NO.: 3.7.1 | |
| TEST ELEMENT: Training Requirements Management Component | |
| MDCM OD TECHTYIN (C) | |

TEST OBJECTIVE(S):

- 1. The component shall provide valid and reliable methodologies and mechanisms for generating a master task list, obtaining AFS performance and proficiency data, creating evaluation and training requirements, generating position training requirements, and monitoring other necessary training requirements.
- 2. The component shall be compatible and interactive within and among its own subcomponents.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-4

Market St.

1. Does the Training Requirements Management Component provide the user with acceptable methods and tools needed to identify and manage airmen training requirements?

CI-1

2. Do the subcomponents interact effectively?

LEVEL OF T&E REQUIRED:

- 1. E user Acceptance Survey Results Component level.
- 2. T see Software Test Plan for details on interactive testing at the component level.

SCHEDULED TEST DATE:

- Surveys administered during Beta Tests.
- 2. Alpha Test immediately following software development; see schedule, Appendix G.

RESOURCES/FACILITIES REQUIREMENTS:

- AF Workstation/AF Workgroup.
- 2. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data.

EVALUATION INSTRUMENTS REQUIREMENTS:

- 1. User surveys (see sample for software products).
- 2. Software Alpha Test procedures.

BASELINE DATA COLLECTION REQUIREMENTS:

N/A

TEST DATA COLLECTION REQUIREMENTS:

- 1. AF reactions to use of products.
- 2. See Software Test Plan.

DATA ANALYSIS REQUIREMENTS:

- 1. Descriptive individual item and composite score data analysis.
- 2. Analysis of Alpha Test results.

- 1. Majority of users rate product satisfactory; review of specific comments for possible revisions or additional training.
- 2. Go/No Go Status.

| SUBSYS | STEM: | MANAGE | MENT | | | |
|--------------------|----------|--------|------------|--------|--------|--|
| B ₁ SPE | EC REQUI | REMENT | REFERENCE | NO.: | 3.7.1A | |
| TEST I | ELEMENT: | Deve | lop Master | r Task | List | |

TEST OBJECTIVE(S):

- 1. On-line. The subcomponent shall provide the capability for the user to access Air Force data and to generate and review a Tentative Master Task List (TMTL).
- 2. Off-line. The subcomponent shall provide guidelines and coordination procedures for validating the master task list of all performed within an AFS.
- 3. On-line. The subcomponent Chall provide the capability for the user to generate and review a validated final Master Task List (FMTL). Average time to search for and display an isolated task shall not exceed sixty seconds.
- 4. The subcomponent plans, procedures, and tools shall be user friendly and supportable.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-1

1. Are the requirements as specified in Data Dictionary Process 1.1.1.1.1 - 1.1.1.6 met?

CI-1

2. Are the requirements as specified in Data Dictionary Process
1.1.1.2.1 - 1.1.1.2.4 met?
3.7.1A cont.

CT-1

3. Are the requirements as specified in Data Dictionary Process 1.1.1.3.1 - 1.1.1.3.6 met?

CI-1

4a. Does the associated hardware support the software products?

CI-4

4b. Do the users of the plans, tools, and procedures rate each as satisfactory?

LEVEL OF T&E REQUIRED:

- 1. T see Software Test Plan for further details
- 2. I expert judgment
- 3. T see Software Test Plan for further details
- 4a. I Software Problem Report results see Software Test Plan
- 4b. A user surveys

SCHEDULE TEST DATE:

- Alpha Test immediately following software development; see phased-in schedule
- 2. Review completed within 10 days following development; see phased-in schedule
- 3. Alpha Test immediately following software development; see phased-in schedule
- 4a. Part of Alpha Test procedures
- 4b. Surveys administered during Beta Tests for 1,2,3

RESOURCES/FACILITIES REQUIREMENTS:

- 1. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data
- 2. DAC/AF experts in Buildings 1808 and 428
- 3. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data
- 4a. DAC/AF inspectors for review of software problem report
- 4b. AF Workstation/AF Workgroup

EVALUATION INSTRUMENTS REQUIREMENTS:

- Software Alpha Test procedures
- 2. Inspector Review Form
- 3. Software Alpha Test procedures
- 4a. Software Problem Report
- 4b. Users surveys (see sample for software products)

BASELINE DATA COLLECTION REQUIREMENTS:

N/A

MARKET WATER 11

TEST DATA COLLECTION REQUIREMENTS:

- 1. See Software Test Plan for further details
- 2. DAC/AF expert(s) review of off-line plans and products
- 3. See Software Test Plan for further details
- 4a. See Software Test Plan for further details
- 4b. AF reactions to use of products

DATA ANALYSIS REQUIREMENTS:

- 1. Analysis of Alpha Test results
- 2. Descriptive judgments
- 3. Analysis of Alpha Test results
- 4a. Analysis of Alpha Test results
- 4b. Descriptive individual item and composite score data analysis TEST CRITERIA GOALS:
- 1. Go/No Go Status
- 2. Expert judgment that product(s) satisfies requirements
- 3. Go/No Go Status
- 4a. Go/No Go Status
- 4b. Majority of users rate product satisfactory; review of specific comments for possible revisions or additional training

| SUBSYSTEM: | MANAGEMENT | |
|-------------------------|--|--|
| B ₁ SPEC REQ | QUIREMENT REFERENCE NO.: 3.7.1E | |
| - | NT: Manage Other Training Requirements | |
| BECH ODIECH | | |

TEST OBJECTIVE(S):

- 1. Off-line. The subcomponent shall (or the user shall) manually research the appropriate document or source and identify: proved Ancillary Training Requirements, approved Additional Duties Training Requirements, Contingency Task Requirements and Career Development Course training requirements.
- Off-line. The subcomponent shall establish coordination plans and procedures to ensure approved revisions to policy related to other training requirements are identified in advance of implementation to permit proper planning and execution of system changes, as required.
- 3. Off-line. The subcomponent shall develop algorithms to select training requirements co be managed in the Airman Training Management component, and to support the identification of potential position task training requirements after OPTRs have been compared to the ATR.
- On-line. The subcomponent shall provide the capability to enter and update training requirements and frequencies of training as needed; match requirements to organizational levels, AFSs, or event or condition for which they are prescribed; assign identification codes to each course or training requirement; and to store both requirements and selection algorithms in the system.
- The subcomponent plans, procedures, and tools shall be user friendly and supportable.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-1

1, 2. Are the manual requirements as specified in Data Dictionary Processes 1.1.5.1 - 1.1.5.6 met?

Are the requirements as specified in Data Dictionary Process 1.1.5.7 met?

4. Are the automated requirements as specified in Data Dictionary Processes 1.1.5.1 - 1.1.5.6, and 1.1.5.8 met?

CI-1

5a. Does the associated hardware support the software products?

CI-4

- 5b. Majority of users rate product satisfactory; review of specific comments for possible revisions or additional training.

| SUBSYSTEM: MANAGEMENT | |
|--|-----|
| B ₁ SPEC REQUIREMENT REFERENCE NO.: 3.7 | .1F |
| TEST ELEMENT: <u>Manage Local/New Tasks</u> | |
| | |

TEST OBJECTIVE(S):

- 1. On-line. The subcomponent shall provide the capability for the user to add new/local AFS tasks to the OPTR task list.
- 2. Off-line. The subcomponent shall provide hard copies of all tasks that are being performed within a specified AFS but were not contained in occupational survey data for that AFS to the AFOMC.
- 3. Off-line. The subcomponent shall make decisions concerning whether or not to include Local or New Tasks on applicable MTLs based on manually supplied data indicating how widespread the requirements are for performing the tasks.

NOTE: Following actual implementation of the prototype AOTS, the capability shall exist for this task use data to be collected and reviewed on-line.

4. The subcomponent plans, procedures, and tools shall be user friendly and supportable.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-1

1. Are the automated and automatic requirements as specified in Data Dictionary Processes 1.1.5.1 - 1.1.6.9 met?

CI-1

2. Are the manual requirements as specified in Data Dictionary Process 1.1.6.5 met?

CI-1

3. Are the manual requirements as specified in Data Dictionary Process 1.1.6.9 met?

CI-1

4a. Does the associated hardware support the software products?

CI-4

4b. Do users of the plans, tools, and CI-1 procedures rate each as satisfactory?

LEVEL OF T&E REQUIRED:

- 1. T see Software Test Plan
- 2. I expert judgment
- 3. I expert judgment
- 4a. I Software Problem Report results see Software Test Plan
- 4b. A user survey

SCHEDULED TEST DATE:

- 1. Alpha Test immediately following software development; see schedule, Appendix G.
- 2, 3. Review completed within 10 days following development; see schedule, Appendix G.
- 4a. Part of Alpha Test procedures.
- 4b. Surveys administered during Beta Tests.

RESOURCES/FACILITIES REQUIREMENTS:

- 1. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data.
- 2, 3. DAC/AF experts in Buildings 1808 and 428.
- 4a. DAC/AF inspectors for review of Software Problem Reports.
- 4b. AF Workstation/AF Workgroup.

EVALUATION INSTRUMENTS REQUIREMENTS:

- 1. Software Alpha Test procedures.
- 2, 3. Inspector Review Form.
- 4a. Software Problem Report.
- 4b. User surveys (see sample for software products).

- 1. Software Alpha Test procedures.
- 2a. Software Problem Report.
- 2b. User surveys (see sample for software products).

BASELINE DATA COLLECTION REQUIREMENTS:

N/A

TEST DATA COLLECTION REQUIREMENTS:

- 1. See Software Test Plan for further details.
- 2a. See Software Test Plan for further details.
- 2b. AF reactions to use of products.

DATA ANALYSIS REQUIREMENTS:

- 1. Analysis of Alpha Test results.
- 2a. Analysis of Alpha Test results.
- 2b. Descriptive individual item and composite score data analysis.

- 1. Go/No Go Status.
- 2a. Go/No Go Status.
- 2b. Majority of users rate product satisfactory; review of specific comments for possible revisions or additional training.

| SUBSYSTEM: EVALUATION | - |
|---|---|
| B ₁ SPEC REQUIREMENT REFERENCE NO.: _3.7.4.2 | - |
| TEST ELEMENT: System Effectiveness Report Generation | |
| | |

TEST OBJECTIVE(S):

- 1. Off-line. The subcomponent shall provide the guidelines and mechanisms for the user to manually collect evaluation materials development data generated during the development process.
- 2. Off-line. The subcomponent shall provide the capability for the user to store evaluation materials development data for use in the generation of standard and ad hoc system effectiveness reports.
- 3. On-line. The subcomponent shall provide the capability to collect, maintain, and report up-to-date information to system managers. The reports shall provide an analysis of system data reflecting the effectiveness of the AOTS. Reports generated shall include standard reports generated at periodic intervals for specified recipients, and ad hoc reports generated on demand to address specific AOTS performance aspects. Note: Requests for data verification and user defined ad hoc reports are a manual process and not subject to evaluation under the Master Test Plan.
- 4. The subcomponent plans, procedures, and tools shall be user friendly and supportable.

EVALUATION QUESTION(S) TO BE ANSWERED:

CI-1

1. Are the manual requirements as specified in Data Dictionary Process 2.4.2.5 met?

CI-1

2. Are the requirements as specified in Data Dictionary Process 2.4.2.5 met?

CI-1

3. Are the requirements as specified in Data Dictionary Processes 2.4.2.1 - 2.4.2.4 met?

CT-1

4a. Does the associated hardware support the software products?

CI-4

4b. Do the users of the plans, tools, and procedures rate each as satisfactory?

LEVEL OF T&E REQUIRED:

- 1. I expert judgment
- 2, 3. T see Software Test Plan
- 4a. I Software Problem Report results see Software Test Plan
- 4b. A user survey

SCHEDULED TEST DATE:

- 1. Review completed within 10 days following development; see schedule, Appendix G.
- 2, 3. Alpha Test immediately following software development; see schedule, Appendix G.
- 4a. Part of Alpha Test procedures.
- 4b. Surveys administered during Beta Tests for 1, 2, 3.

RESOURCES/FACILITIES REQUIREMENTS:

- 1. DAC/AF experts in Buildings 1808 and 428.
- 2, 3. DAC staff utilizing Air Force facilities/equipment/dummy and/or real data.
- 4a. DAC/AF inspectors for review of Software Problem Reports.
- 4b. AF Workstation/AF Workgroup.

EVALUATION INSTRUMENTS REQUIREMENTS:

- Inspector Review Form.
- 2, 3. Software Alpha Test procedures.
- 4a. Software Problem Report.
- 4b. User surveys (see sample for software products).

BASELINE DATA COLLECTION REQUIREMENTS:

N/A

TEST DATA COLLECTION REQUIREMENTS:

- 1. DAC/AF expert(s) review of off-line plans and products.
- 2, 3. See Software Test Plan for further details.
- 4a. See Software Test Plan for further details.
- 4b. AF reactions to use of products.

DATA ANALYSIS REQUIREMENTS:

- 1. Descriptive judgments.
- 2, 3. Analysis of Alpha Test results.
- 4a. Analysis of Alpha Test results.
- 4b. Descriptive individual item and composite score data analysis.

TEST CRITERIA GOALS:

- 1. Expert judgment that product(s) satisfies requirements.
- 2, 3. Go/No Go Status.
- 4a. Go/No Go Status.
- 4b. Majority of users rate product satisfactory; review of specific comments for possible revisions or additional training.

| SAMPLE INSPECTION REVIEW FORM | B- 9 |
| SAMPLE CHECKLIST: MANUAL PROCEDURE | B-10 |
| SAMPLE CHECKLIST: SOFTWARE TEST | B-11 |
| SOFTWARE PROBLEM REPORT | B-14 |
| PROBLEM REPORT | B-16 |

INTRODUCTION

In accordance with this Master Test Plan, AOTS products undergo alpha testing (informal and formal software testing) and beta testing (initial use and evaluation by users) prior to becoming operational.

Alpha testing will ensure that the software meets the functional requirements, operates correctly, and is satisfactorily supported by the hardware. Alpha testing will be governed by Appendix D, the Software Test Plan (STP), and will be conducted by DAC software development personnel using real and simulated data bases as appropriate. The Software Problem Report (pp. B-14, -15) will be used to document difficulties, and will be the basis for initiating corrective actions. Sample procedural checklists for software follow (pp. B-11 to B-13).

Beta testing of software products will begin after alpha testing is completed. Beta testing will be in accordance with the Master Test Plan, and will be conducted by DAC with both DAC and AF personnel using and evaluating the software products. Problem Reports (p. B-16) will be used to document difficulties and will be the basis for corrective actions. During beta testing, products will be evaluated for user friendliness by means of user surveys (see pp. B-4, to B-7). Experts (DAC and AF) will use procedure crecklists (sample on pp. B-10, -11) and inspection review forms (see pp. B-8, -9) to establish that AOTS products meet requirements.

Whenever "expert judgment" or "panel of experts" is called for during testing, the DAC Test Manager will designate one or more DAC personnel with knowledge of the product to serve as the expert(s) for testing. The AF Program Manager or designee may, as desired, designate one or more AF personnel to serve in this expert capacity for any of the testing activities. The Test Working Group will serve as clearing house for discussion and recommendations as to DAC and AF experts.

PROCEDURAL GUIDE FOR USER SURVEY

- 1. Users of the product (during Phase II, usually DAC and AF personnel) will be given time to become acquainted with the product.
- 2. Users will then respond to a survey where they will indicate their level of agreement to each item of concern on a 7-point opinion scale. The surveys for software products will contain standard statements to aid in cross comparisons of products. When required, the survey for a particular product will contain additional items of specific concern. The users will be provided directions and space for recording specific reactions, problems, or questions related to the product. These will be tabulated and analyzed separately from the descriptive item analysis.

Each survey will contain general directions to the survey administrator for setting a positive climate for administering the survey. Standard directions to the users will also be contained on the survey instrument.

3. Results will be tabulated by frequency and percent on an item by item basis, and across items for a total score. A product would satisfy the user friendliness goal by reaching the following test criteria goal.

Product is rated satisfactory or higher on each item by 70% of those surveyed.

Alternate goals (could be considered):

Product is rated satisfactory or higher on all critical items by 80% of those surveyed, and on all other items by 50% of those surveyed.

Each item response is given a relative value, with Strongly Agree (SA) coded 7 and Strongly Disagree (SD) coded 1. An average score for each item is calculated, and each item must meet or exceed minimum acceptance value (4.0) or be flagged for review.

SAMPLE: AOTS USER SURVEY

TEST EDITOR SURVEY

<u>DIRECTIONS</u>: Please complete this survey without conferring with other IST members. The opinions you give should be your own.

Enter your name, SSAN, and the date in the appropriate spaces. Indicate your response to each statement by circling the number that corresponds with your opinion of the item. Specific reactions, comments, and explanation may be added at the end of the survey.

| NAME | | | | | SSAN | | |

APPENDIX C MASTER TEST PLAN PROCESS DATA

PROCESS DATA PROCEDURES

Process data will involve the acquisition of Deployment Observations, hotline records, and Log-On data. This data will be collected during the AOTS prototype deployment period and used to provide ongoing feedback on the utilization of AOTS. Moreover, this data will be used to enhance the interpretation of the outcome measures collected during and near the end of the prototype deployment period.

C.1 WORKCENTER OBSERVATION FORMS

- C.1.1 <u>Data to be Collected</u>. Workcenter observation data involves notations and comments on how the software and hardware are functioning at the workcenter level. In addition to collecting descriptive information (i.e., user AFSC, user position, and workcenter), computer down time will be recorded; and the functioning of AOTS software tools and hardware components will be observed and documented.
- C.1.2 Requirements for DCRs. The DCRs will be AOTS IST and staff members who will:
 - 1. Learn to conduct an observation during visits to the workcenters, using the Deployment Observation Form, Figure C.1, p. 7.
 - 2. Accurately document observations on said form.
- C.1.3 <u>Frequency of Data Collection</u>. Behavioral observations will be conducted at least once a week per workcenter. Documentation of the observations will be completed during each visit to the workcenters.
- C.1.4 <u>Data Collection Procedure</u>. Members of the IST will act as the DCRs for the workcenters within their respective AFSs.
- C.1.4.1 Complete Deployment Observation Form.
 - 1. Enter date and identifying information at the top of the form (i.e., observer, user AFSC, workcenter, user level) Figure C.2, p. 8.
 - Record a notation of +(positive), -(negative), or o(neutral) to the left of the software function and/or hardware component.

- 3. Record a brief statement in the comment section to explain the notation. For example, if you observe a trainer effectively using the ATR, and he responds favorably when you ask him about the ATR, you would enter + A 10 (reference code for the ATR function) then a brief explanation of the observation. Similar procedures will apply for entries pertaining to the hardware.
- 4. Conduct observations in the workcenters during computer down times resulting from problems with the communication lines, VAX 8650, etc.. Document the duration of down time, impact on OJT, continued OJT activity during this down period, and the process of re-entering the system when the computer is functioning again. Because the down time period may be prolonged, a follow-up visit may be necessary to collect this information from the workcenters.
- C.1.5 <u>Time Required for Data Collection</u>. Time needed to conduct observations at the workcenters and document information is as follows:

30 - 45 min. Conduct observation 15 min. Complete observation form

- C.1.6 <u>Disposition of Data</u>. After the observation forms have been completed, they will be delivered to the IST Superintendent, who will conduct a quality control check of the data to assure that accurate and understandable information is on the observation form. The quality control will involve:
 - Check to see that all descriptive information has been accurately entered on the form;
 - Check to assure that an explanation of the observation has been entered in the comment section.

These observation forms will be forwarded to T-1 for analysis by the AF staff. Analysis of the data will consist of descriptive statistics and content analysis.

C.2 AOTS HOTLINE PROBLEM REPORT

C 2.1 <u>Data to be collected</u>. The ACTS Hotline Problem Report is designed to document the incoming calls from ACTS users needing assistance with various problems encountered during the deployment period. This form will involve recording the specific ACTS function, type of malfunction, specific information regard-

ing the problem, and resolution or recommended action.

- C.2.2 <u>Requirements for DCR</u>. DCR will be composed of a designated IST member who will:
 - 1. Learn to respond to calls made on the AOTS hotline,
 - 2. Accurately document information on the hotline report form.
- C.2.3 <u>Frequency of Data Collection</u>. The frequency of the data collection will be contingent on the number of incoming calls on the hotline.
- C.2.4 Data Collection Procedure.
- C.2.4.1 Complete AOTS Hotline Problem Report.
 - On the upper portion of the form, enter the caller's name phone number, date of call, time of call, and workcenter.
 - 2. In terms of the reported problem, enter the following information:
 - specific OJT/computer function that is being attempted (e.g., log-on, ATR),
 - description of the malfunction,
 - question being asked to resolve the problem,
 - individual providing the resolution,
 - action taken/recommended to resolve the problem,
 - comments that may provide additional information.
 - 3. On the bottom of the form, enter the person recording the problem report.
- C.2.5. <u>Time Required for Data Collection</u>. Time needed to complete information on the problem report should be, in most cases, within 15 minutes Calls recorded on the answering machine should be returned within 24 hours of the recorded message.
- C.2.6 <u>Disposition of Data</u>. After the problem report is completed, it will be submitted to the AOTS Hotline NCOIC. He will perform a quality control check to assure complete and understandable entry of the information. After the quality control check, this data will be submitted for analysis at T-1. AF Technical Advisor will use descriptive analysis to analyze the data.

C.3 LOG-ON DATA

- C.3.1 <u>Data to be collected</u>. The log-on data consists of a computer program that records the utilization of the AOTS products at the workcenter level. More specifically, this program identifies the user by ID number, records the date, entry/exit time when user logs on/off the system, specific AOTS tools/functions that have been used, and the CPU time spent on each tool/function.
- C.3.2 <u>Frequency of data collection</u>. The log-on computer program will be accessed on the VAX at Brooks AFB on a bimonthly basis.
- C.3.3 <u>Data Collection Procedure</u>. The log-on computer program will record the utilization of the AOTS functions on a daily basis. Every two weeks, this program will be converted to an AS-CII text file for statistical analysis. This ASCII file will be accessed on the Zenith 248 at T-I for completion of the analysis.

The following is the type of data that will be available for analysis:

- Log-on procedures: User Log-On, program start, program end;
- Type of users: Trainee, Trainer, Supervisor, Training Manager, Evaluator;
- Log records: Activity date, Activity time, System Start, User ID (SSAN), program (function) name, CPU time.

This program will be sorted by AFSC, component, and user type.

- C.3.4 <u>Disposition of Data</u>. Statistical analysis of the Log-on data is as follows:
 - 1. Descriptive analysis of data to determine range, mean, and distribution of CPU time. This data will, in turn, be sorted by AFS, components and user type.
 - 2. Basic inferential analysis (e.g., t-tests, linear regression) will be conducted to determine differences within and/or between AFSs and/or components.
 - 3. Trend analysis within AFSs, components, and users to determine utilization or under-utilization of the AOTS functions across time.

- 4. Develop user groupings (e.g., low and high users of AOTS AOTS functions) to interpret and/or add meaning to the outcome measures (e.g., Acceptance Survey, Opinion Survey).
- 5. The SAS program will be used by the AF technical advisor to analyze this data.

APPENDIX D

SOFTWARE TEST PLAN

FOR

ADVANCED ON-THE-JOB TRAINING SYSTEM

Prepared For:

UNITED STATES AIR FORCE AIR FORCE SYSTEMS COMMAND AIR FORCE HUMAN RESOURCES LABORATORY/OL-AK BERGSTROM AFB, TX. 78743-5000

21 August 1987

PREFACE

This document was prepared for the AOTS software development team. It is not a CDRL item, however, it is referred to by the CPCI Development Specifications, Software Development Plan, and Master Test Plan. It is intended to be used both as a standalone document, in low level software development testing, and in conjunction with the Master Test Plan, in higher level requirement verification testing.

This document describes formal test plans for system testing and acceptance testing. Acceptance testing was deleted from the DAC requirements list. However, since this document is used as a stand-alone, a decision was made to include the document as a whole to avoid future confusion. Any mention in this document to acceptance testing should be disregarded and not considered in conjunction with the Master Test Plan. Only procedures detailing system testing should be referenced in conjunction with the MTP.

This document is based on the provisions set forth in Data Item Description (DID) DI-MCCR-80014. This DID is applicable to DOD-STD-2167, which is not an AOTS applicable document. Some deviation is taken from this DID in Sections 3 and 4. In Section 3, the terminology Computer Program Component (CPC) was substituted for Computer Software Component (CSC). CPC is consistent with the AOTS CPCI Development Specifications, written according to the 21 March 79 version of MIL-STD-483. CSC is terminology adopted at a later point in time and is used with DOD-STD-2167 documentation. In Section 4, this document divides formal testing into system and acceptance testing. The DID does not make this distinction.

DIDs DI-MCCR-80015, Software Test Description, and DI-MCCR-80016, Software Test Procedure, were not followed structurely in the Formal Test Procedure model, see Attachment C. The Formal Test Procedure contains the same information as these two DIDs describe, but in a format that makes formal test procedures consistent with informal test procedures. The same is true for DID DI-MCCR-80017, Software Test Report, and the Formal Test Report model presented in Attachment D.

The identification of AOTS formal test procedures in Section 4 is complete to the point of the current state of the phased software development effort. As detailed design proceeds on the next set of software, these tables will be updated accordingly.

ACKNOWLEDGEMENTS

Some of the material contained in this docment has been adapted for use from the following manuals and books:

1. SCOPE

- 1.1 Identification. This Software Test Plan establishes the plan for testing the Computer Program Configuration Items (CPCIs) in the Advanced On-the-job Training System (AOTS) Computer Support Subsystem, Software Component. The CPCIs are identified as the Management CPCI as described in the development specification numbered 70S647411; the Evaluation CPCI, 70S647413; and the System Support CPCI, 70S647414.
- 1.2 Purpose. The purpose of the AOTS is to test a design concept that will apply automated support to increase the efficiency and effectiveness of the current Air Force On-the-Job Training (OJT) system. The Management CPCI will provide software support for the AOTS Management Subsystem, 70S647100. It will provide software to support the functions of identifying and managing training requirements for an Air Force Speciality (AFS), and managing the airmen undergoing training in the AFS.

The Evaluation CPCI will provide software support for the AOTS Evaluation Subsystem, 70S647300. It will provide software to support the functions of developing and maintaining evaluation instrumentation, evaluating performance of tasks by airmen, performing training quality control functions, and evaluating the effectiveness of the AOTS as a system.

The System Support CPCI will be composed of the services required by the other CPCIs to interface with the Hardware Component, 70S647401. This CPCI will perform operating system functions, terminal communication and data base input/output, and will provide security functions to control access to the system.

1.3 Introduction. This plan describes AOTS Phase II software testing. Software testing is divided into two phases: informal and formal testing. Both of the testing phases are divided into two levels. Unit and integration level testing are done in the informal phase. System and acceptance level testing are done in the formal phase. Together, these four levels satisfy the Phase II testing requirements for the Software Component. Figure 1 depicts software testing phases and their levels. The following paragraphs detail each test phase accompanied by the two levels of testing within the phase.

It is appropriate to equate the levels of testing described in this document with the test types described in the quality assurance provisions paragraphs in the Development Specifications for the Management CPCI, Evaluation CPCI, and System Support

CPCI. Computer Program Test and Evaluation as described in the Development Specifications is equivalent to unit level and integration level testing as described in this document.

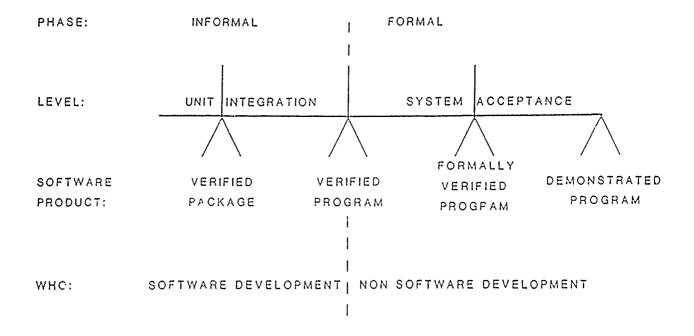

Figure 1. AOTS SOFTWARE TEST PLAN

Preliminary Qualification Tests as described in the Development Specifications is equivalent to system level testing as described in this document. Formal Qualification Tests as described in the Development Specifications is equivalent to acceptance level testing as described in this document.

2. REFERENCED DOCUMENTS. The following government documents are referenced in this plan. These documents were written by DAC as part of system design and development under the AOTS contract.

70S647100 Prime Item Development Specification for the Management Subsystem of the AOTS 705647300 Prime Item Development Specification for the Evaluation Subsystem of the AOTS 70S647401 Critical Item Development Specification for the Hardware Component of the AOTS 70S647411 AOTS Management CPCI Development Specification 70S647413 AOTS Evaluation CPCI Development Specification 70S647414 AOTS System Support CPCI Development Specification AOTS Software Development Plan AOTS Configuration Management Plan AOTS Master Test Plan

- PLANS FOR INFO, MAI, TESTING. The informal phase of testing consists of unit level testing and integration level testing. is informal because the testing takes place as the code is being developed and is planned and performed by the people doing that The expected result of informal testing is a development. verified program.
- Unit Test Planning. The intent of unit testing is to verify that a program unit performs as specified in the respective CPCI Product Specification. For the purposes of AOTS software development, unit is defined as an Ada package.
- Unit Test Requirements. Unit testing consists of two The first phase consists of compiling the unit and correcting compilation errors. The second phase consists of testing the unit for adherance to the following general requirements:
 - a. Conformation to specifications and requirements will be verified:
 - Check that the unit is necessary
 - Check function, logic, and computations
 - Check adherance to standards justify exceptions
 - b. Execution paths will be verified;
 - Execute every instruction at least once
 - Every decision should be executed at least once in each possible direction
 - c. Data handling capability will be verified;
 - Check type and format of input data
 - Check input data at nominal, extreme, erroneous, and exceptional values
 - Check value, type, and format of output data d. Design extremes will be verified.
 - - Check error detection and recovery

This second phase is accomplished by desk checking the unit and actual execution of the unit. The testing continues until all known errors have been eliminated and coded unit logic matches the design. Interfaces may be checked by using stubs to simulate other units.

Unit Test Responsibilities. The unit test is planned, performed, and controlled by the programmer responsible for the Planning includes what the programmer intends accomplish for a test, the inputs that are required, the outputs that are expected, and how the test is to be conducted. Paragraph 3.1.4 provides a model for putting this data together in to a unit test procedure. The programmer prepares a

procedure, according to this model, that contains the tests to be conducted for each unit. This procedure should be reviewed at the unit code walkthru. The procedure is maintained in the Unit Development Folder (UDF). Much of the testing at this level is very detailed and will not be conducted again in higher level tests. Thus, the record of informal testing and the corresponding test results will be kept in the UDF and preserved for reference purposes. A model test report is provided in paragraph 3.1.5 to assist in this.

Unit testing can uncover coding deficiencies. The programmer responsible for the unit is expected to correct the deficiencies and perform the unit test again.

Unit testing can also uncover design deficiencies. The programmer responsible for the unit should report the possibility of any such conditions to the CPCI team leader and, in turn, to the software manager. Together, they will determine the effect on the unit and released documentation. Correction of the deficiencies of this nature must be handled in accordance with the Configuration Management Plan.

During unit testing, the primary goal is to test the functions of the unit. Thus, stubs are used to simulate other units which the unit in test is targeted to interface with, but which are still under development. Data that the unit in test provides to another unit must be checked for accuracy. However, data provided by another unit to the unit in test could be simulated.

- 3.1.3 Unit Test Schedule. Initial unit testing takes place during the software development period for a unit. Thus the unit test schedule follows the software development schedule for a program. The general program development schedule is specified in the AOTS Software Development Plan. The detailed unit test schedules are kept with the test procedures in the UDFs.
- 3.1.4 Unit Test Procedure Model. Attachment A provides a model test procedure. This is to be used as a guide for the individual creating specific AOTS software unit test procedures. The following paragraphs describe the elements of the procedure and include instructions to be used by the author in making up the procedure.

Section I identifies the unit and the author of a test procedure. Both of these items, as well as the preparation date of the procedure, should be filled in. The test type should be identified as "unit". As the document is revised, the revision information, including author and date, should be filled in.

Section II is scheduling information for the performance of

the unit test during development. Enter the date that the test is projected to start and the date it is expected to complete, as well as an estimate of the length of time to perform the procedure. These entries can be used for planning and scheduling purposes for this unit. The development hours entry is a record of how long this test procedure took to develop and is intended to be used for future planning and schedule purposes.

Section III specifies the plan for resources necessary for conducting the unit test. Identify the source of the unit to be tested. Identify data base files, if any, that are necessary to test this unit. Indicate whether the files are new to this unit or if existing files and data can be used. Identify other units, if any, that are necessary to test this unit. Besides serving as a planning tool this provides a low level critical path, i.e., the actual versions of unit x and unit y have to be completed for you to test unit z. Identify hardware requirements for the test. If the normal AOTS hardware environment is to be used, then indicate this. If the unit requires hardware that has not been used in the AOTS test environment before, e.g. mark sense reader or X/Y input device, then list this equipment.

Section IV identifies debug information, should that be appropriate. Does the unit have special debugging code? If so, how is that feature activated?

Section V describes the specific functional testing to be performed on the unit. Identify the elements of the unit that are tested by this procedure. Identify the functions of the unit that are tested by this procedure. Identify execution paths in the unit that are not tested by this procedure. This may include fatal error conditions, nonexistant production data base files, permanent i/o errors, etc. Elaborate on the actual sequence for the test procedure: what inputs are necessary, what outputs are expected from that input, and what function does input/output sequence check out (this is indicated with ordinal cross reference to the above function list). If specific input from a file is necessary for the test, indicate what this Similarly, record what the condition of particular files are as a result of this test. List what error handling is to be verified in this unit. If the unit uses data produced by another unit or produces data to be used by another unit, then this information should be recorded under "data compatibility". The heading "other testing" is to used to describe testing that you feel should be performed but does not fall into one of the other classes. When writing the test procedure, be familiar with the contents of the Test Report and the Testing Check List, described in the following paragraph, so that minimum and maximum data ranges, as well as typical values and similar constraints

can be tested. Remember to author the test plan in such a manner that other people, besides yourself, can perform the test. Be clear, complete, yet concise.

3.1.5 Unit Test Report Model. Attachment B is a model test report. It is to be used as a guide to report on the execution of unit tests and should be filled out by the individual performing the test during the process of, or immediately after, a unit test. The Test Report should be used as an aid in all unit testing, with the completed test reports placed in the UDF. When unit testing is performed at several levels, i.e. testing each subprogram, or group of subprograms, followed by testing at the package level, the test reporting should follow that same plan. The following paragraphs describe the elements of the report.

Section I identifies the unit tested, the person that performed the test, and the date of the test. The same report form is used to document results for a unit level test and for an integration level test. Therefore mark the test level as appropriate. Fill in the environment that the unit was executed in. The time duration of the test can be used for future planning purposes in unit testing and should be entered as hours or minutes.

Section II is the reason the test was performed. Is the test being performed on a newly developed unit, is a unit being enhanced, or is the unit being tested because other units that it references were changed? Unit test reports are necessary not only for new units but also for maturing units.

Section III is an indication of the test results. Was the outcome expected or unexpected? If the outcome was not as expected, then a description of the problem or the action to be performed should be furnished, either in this section or in the following checklist. This area can also be used for notes or reminders if the test was successful.

Section IV is a worksheet to be used in conjunction with the test sequence section of the test procedure. It is to be used to note problems or to act as a placeholder while executing the test sequence.

Section V is a checklist for unit testing. It is to be used as a guide, as well as a reminder of what to test and what to look for while testing. The headings in the checklist represent the major software performance and requirement classifications to be checked in unit testing. Beneath each heading is a list of items to exercise or check. As items are tested, they are marked off or notes made for problem reminders.

3.2 CPC Integration and Test Planning. Computer Program Component (CPC) Integration consists of building a program by iteratively adding units, and, as the units are integrated, testing to ensure the resulting software matches that described in the Development and Product Specifications.

At each iteration, integration subelements are combined to form integration elements. This process begins with two or more functionally and logically related units which have passed unit These units are integrated and the resultant integration element tested. Once fully tested, such elements become the subelements which are integrated to form larger elements. Thus, an integration subelement may be either a fully tested unit or a fully integrated set of units and an integration element is a set of functionally and logically subelements.

Ultimately, aggregates of integration elements form CPCs. For the purposes of AOTS software development, the terminology CPC and program are used interchangeably.

3.2.1 CPC Integration and Test Requirements. Many of the requirements for integration testing are the same as for unit testing. Other requirements are imposed to ensure that subelements are compatible and consistent.

Like unit testing, integration testing consists of two phases. The first phase consists of compiling, linking, and loading the integration element and correcting any resulting errors. The second phase consists of testing the unit for adherance to the following general requirements:

- a. Conformation to specifications and requirements will be verified;
 - Check that the elements are necessary
 - Check function, logic, and computations
 - Check adherance to standards justify exceptions
- b. Execution paths will be verified;
 - Execute every major path through the subelement
 - Every subelement should be called at least once by each possible calling subelement
- c. Data handling capability will be verified;
 - Check type and format of input data
 - Check input data at nominal, extreme, erroneous, and exceptional values
 - Check value, type, and format of output data
- d. Design extremes will be verified.
 - Check error detection and recovery
- Check data compatibility between subelements Finally, the testing must verify that the integration is

forming the CPCs as they are described in the specifications. If the CPCs interface with other CPCs, then these interfaces must also be validated.

The second phase is accomplished by desk checking the element and actual execution of the element. The testing continues until all known errors have been eliminated and integrated element logic matches the design.

CPC Integration and Test Responsibilities. As in unit testing, the CPC integration test is planned, performed, by the programmer(s) responsible for the CPC. controlled Planning includes what the programmer intends to accomplish for a test, the inputs that are required, the outputs that are expected, and how the test is to be conducted. Paragraph 3.2.5 provides a model for a CPC integration test procedure. programmer prepares a procedure, according to this model, that contains the tests to be conducted for the CPC. This procedure should be reviewed at the CPC walkthru. This test procedure is maintained in the UDF for the unit that is the linkable entity that results in a program. A record of test performance along with the corresponding test results should be preserved for reference purposes in the UDF. A model test report is provided in paragraph 3.2.6 to assist in this.

CPC integration testing can uncover coding deficiencies. The programmer(s) responsible for the CPC is expected to correct the deficiencies and perform the CPC integration test again. If the testing reveals problems with a unit outside of the CPC that the CPC is integrating with, then the programmer should report this to the CPCI Team Leader, and if the unit is outside of the particular CPCI, to the software manager. Resolution for the integration deficiency should be made as quickly as schedules allow so as to not hamper further testing.

CPC integration testing can also uncover design deficiencies. The programmer responsible for the CPC should report the possbility of any such conditions to the CPCI team leader and, in turn, to the software manager. Together, they will determine the effect on the CPC and released documentation. Correction of the deficiencies of this nature must be handled in accordance with the Configuration Management Plan.

Any stubs that were used in unit testing are replaced, in stages, by actual units until CPC integration testing is complete. The product of a completed CPC integration test is a complete CPC.

3.2.3 CPC Integration Test Classes. The test classes for CPC integration testing, and as appropriate for unit testing, include

AOTS.STP D-10 V1.0/Feb.87

functional requirement testing, interface testing, terminal and device input/output testing, file input/output testing, and error handling testing. The model test procedure described in paragraph 3.2.5 and the checklist described in the model test report in paragraph 3.2.6 reflect these test classes.

- 3.2.4 CPC Integration and Test Schedules. Integration testing for a program takes place during the software development cycle for that program. Thus the integration test schedule follows the program development schedule. The general program development schedule is specified in the AOTS Software Development Plan. The detailed integration test schedules are kept with the test procedures in the UDFs.
- 3.2.5 Integration and Test Procedure Model. Attachment A is a model test procedure. The same model is used for the unit test procedure and the integration and test procedure, as much of required information is the same. As in the unit test procedure description, this model is to be used as a guide for the individual preparing specific integration test procedures. The following paragraphs describe the elements of the procedure and include instructions to be used by the author in formulating the procedure.

Section I identifies the CPC to be integrated and the author of the test procedure. Each of these items, as well as the preparation date of the procedure, should be completed. The test type should be identified as "integration". As the document is revised, the revision information, including author and date, should be filled in.

Section II is scheduling information for the performance of the integration and test during development. Enter the date that the test is projected to start and the date it is expected to complete, as well as an estimate of the length of time to perform the procedure. These entries can be used for planning and scheduling purposes for this unit. The development hours entry is a record of how long this test procedure took to develop and is intended to be used for future planning and schedule purposes.

Section III specifies the plan for resources necessary for conducting the integration and test. Identify the source of the unit containing the subelements being integrated. Identify data base files, if any, that are necessary to test this unit. Identify people whose expertise or time is required. Identify other software, such as stubs, drivers, or test data generators, necessary to test this element. Identify unique hardware, i.e. hardware of limited availability or hardware not normally a part of the AOTS hardware revironment, that is necessary to test this

element. Unique hardware might include a logic analyzer. Limited availability hardware might include a mark sense reader or X/Y input device.

Section IV identifies debug information, should that be appropriate. Does the element have special debugging code? If so, how is that feature activated?

Section V describes the specific functional testing to be performed by the integration test. Identify the elements that are being integrated and tested by this procedure. Identify the functions of the unit that are tested by this procedure. Identify execution paths in the unit that are not tested by this This may include fatal error conditions, nonexistant production data base files, permanent i/o errors, etc. Elaborate on the actual sequence for the test procedure: what inputs are necessary, what outputs are expected from that input, and what function does this input/output sequence check out (this is indicated with an ordinal cross reference to the above function list). If specific input from a file is necessary for the test, indicate what this data is. Similarly, record what the condition of particular files are as a result of this test. List what error handling is to be verified in this unit. If the test uses data produced by another test procedure or produces data to be used by another test procedure, then this information should be recorded under "data compatibility". The heading "other testing" is to be used to describe testing that you feel should be performed but does not fall into one of the other classes. When writing the test procedure, be familiar with the contents of the Test Report and its Testing Check List, described in the following paragraph, so that minimum and maximum data ranges, as well as typical values and similar constraints can be tested.

Section V of this test plan is much like Section V of the Unit Test Plan. However, the intent of the Specific Testing section is different between the two plans. In the Unit Test Plan the scope of the Specific Testing section deals with all instructions within the unit. In the Integration and Test Plan, the Specific Testing section is concerned with major paths through elements and all of the calling sequences of subelements being integrated.

3.2.6 Integration and Test Report Model. Attachment B is a model test report. As with the test procedure model, the same model for reports is used for unit testing and integration testing, as much of required information is the same. As described in the unit test report description, this model is to be used as a guide to report on the execution of integration tests and should be filled out by the individual performing the

test during the process of, or immediately after, an integration test. The Test Report should be used as an aid in all integration and testing, with the completed test reports placed in the UDF. The following paragraphs describe the elements of the report.

Section I identifies the integration test being performed, the person that performed the test, and the date of the test. The same report form is used to document results for a unit level test and for an integration level test. Therefore mark the test level as appropriate. Fill in the environment that the test was executed in. The time duration of the test can be used for future planning purposes in integration testing and should be entered as hours or minutes.

Section II is the reason the test was performed. Is the test being performed on a newly developed element, is an element or subelement being enhanced, or is the element being tested because other elements that it references were changed? Integration and test reports are necessary not only for newly integrated elements but also for maturing elements.

Section III is an indication of the test results. Was the test outcome expected or unexpected? If the outcome was not as expected, then a description of the problem or the action to be performed should be furnished, either in this section or in the following checklist. This area can also be used for notes or reminders if the test results were satisfactory.

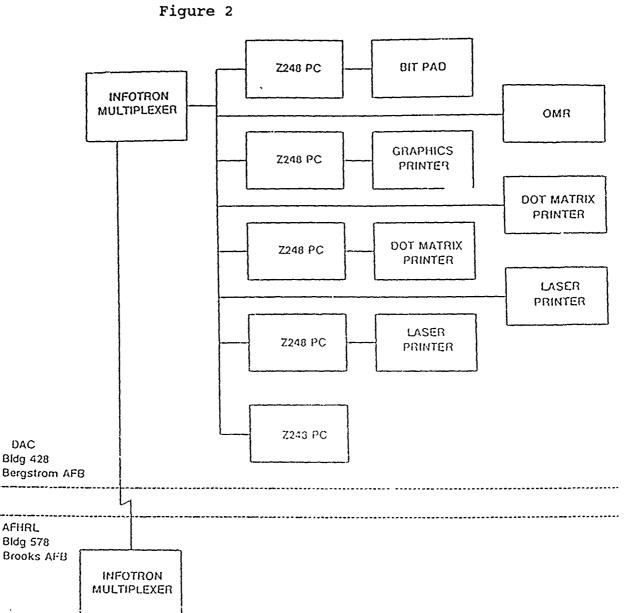

Section IV is a worksheet to be used in conjunction with the test sequence section of the test procedure. It is to be used to note problems or to act as a placeholder while executing the test sequence.

Section V is a checklist for integration and testing. to be used as a guide, as well as a reminder of what to test and what to look for while testing. The headings in the checklist represent the major software performance and requirement classifications to be checked in unit testing. Beneath each heading is a list of items to exercise or check. As items are tested, they are marked off or notes made for problem reminders.

- 3.3 Resources Required for Informal Testing.
- 3.3.1 Facilities. The DAC facilities at Building 428 Bergstrom AFB Austin, Texas, will be the location at which informal testing will be performed. The AFHRL facilities at Building 578 Brooks AFB San Antonio, Texas, will be the location where the host computer for AOTS resides. No classified information will be processed in conjunction with the AOTS Phase II informal tests.

- 3.3.2 Personnel. Personnel required for informal testing are members of the DAC AOTS Software Development Organization. An in-depth knowledge of the requirements and design of the unit or CPC whose test is being planned or performed is mandatory for the personnel. Access to Bergstrom AFB is necessary for these personnel, however, security clearances are not necessary.
- 3.3.3 Hardware. Hardware to be used for informal testing is as follows:
 - A. VAX 8600 located at Building 578, Brooks AFB;
- B. Zenith Z248 Personal Computers located at Building 428, Bergstrom AFB;
- C. Printers, of the following types, located in Building 428, Bergstrom AFB:
 - 1. Laser printers
 - 2. Color printers
 - 3. Dot matrix printers;
- D. Digitizing tablets, of the following types, located at Building 428, Bergstrom AFB;
 - 1. 11x11 digitizers
 - 2. 20x20 digitizers;
- E. Optical Mark Readers located at DAC, Building 428, Bergstrom AFB;
- F. Communication lines and equipment to link the above hardware.
- 3.3.4 Interfacing/Support Software. Software required for informal testing is as follows:
 - A. VAX/VMS operating system, including the utilities:
 - 1. Command Language
 - 2. EDT
 - 3. Linker
 - 4. Debug
 - 5. Run-time Library
 - B. DEC Ada Compiler
 - C. VAX-11 FORTRAN Compiler
 - D. VAX-11 MACRO Assembler
 - E. DEC Code Management System
 - F. MS-DOS, including the utilities
 - 1. Command Language
 - 2. Editor
 - 3. Debug
 - G. Alsys Ada Compiler
 - H. Microsoft Macro Assembler

- 3.3.5 Source. The above resources are provided by AFHRL and DAC in support of the AOTS contract.
- 3.3.6 Test Configuration. The test configuration is graphically portrayed in Figure 2. It consists of the hardware listed in paragraph 3.3.3, located at the facilities specified in paragraph 3.3.1. Note that the peripheral equipment layout in Building 428 at Bergstrom AFB shows all the different types of devices to be used in Phase III AOTS. A particular unit or integration test will use a subset of this equipment. However, the unit and integration tests, considered as a group, will use all of the devices.

4. PLANS FOR FORMAL TESTING. The formal phase of testing consists of system level testing and acceptance level testing. The objective is verification that software meets performance and interface requirements and demonstration that the software meets the acceptance criteria. Formal testing is planned by the software development group but is performed by a group independent of the software developers. The expected product is a demonstratable and deliverable program.

Formal testing will be conducted in accordance with the phased software development approach for AOTS Phase II. A formal test procedure, at the system test level, will be prepared during the development period for that program. This test procedure will be performed and results recorded before the program is released for Air Force use. Thus, before the data development programs are released to the IST, they will go through the system

testing cycle.

Formal test procedures, at the acceptance test level, will be performed and results recorded, in order for the Air Force to

accept AOTS Phase II software.

Both system and acceptance test procedures can be used to satisfy test objectives in the AOTS Master Test Plan that require automated support.

- 4.1 System Test Planning. The intent of System Testing is to formally verify software performance and interface requirements. System level testing is performed on programs that have completed integration level testing.
- 4.1.1 System Test Requirements. System Testing consists of tests and analyses performed to confirm that the software satisfies all the requirements set forth in the AOTS CPCI Development Specifications. It verifies that the "as built" software conforms to these specifications. Formal test plans and procedures are written for System Testing. Analysis is performed for those requirements that are too expensive, in terms of time or resources, to verify by testing.

In order for a program to be ready for system testing, it must have successfully completed integration level testing and be placed under configuration control. The system tests are performed according to test procedures. Test results are documented, including any discrepancies found.

4.1.2 System Test Responsibilities. The system test procedures are prepared by the DAC AOTS software development organization, in particular by the programmer(s) responsible for individual CPCs. This preparation is done during the software

development cycle for a particular program. The test procedure should define in detail the actual activities required to perform the test. It should include a description of what should be accomplished by the test, the inputs that are required, the outputs that are expected, and how the test is to be conducted. The programmer responsible for a CPC will ask that both the program and test procedure be placed under configuration management when the program has completed integration testing, thereby declaring the program is ready for system testing.

Conduct of the system tests will be carried out by the DAC AOTS Instructional Technology Branch personnel. These individuals are different from the people that comprise the software development group, but they are very familiar with system and program requirements. The people who conduct a system test will also be responsible for recording the test results.

Monitoring of system tests will be performed by the DAC AOTS Program Manager or designee. This person's responsibility will be to spot check that the system tests are being conducted according to procedures and that results are recorded.

The Air Force AOTS Program Manager, or representative, may witness system tests.

Results of the system tests are recorded in test reports. If the tests uncovered deficiencies, these are also recorded in the test reports. All deficiencies found in system testing are examined by the Software Technical Review Board. This board is comprised of the software manager and each CPCI team leader. The board decides the extent of each deficiency and schedules the problem to be fixed or directs the deficiency and its ramifications to the Configuration Control Board.

- 4.1.3 System Test Schedule. The system test schedule is specified in the AOTS Software Development Plan.
- 4.1.4 System Test Procedure Model. Attachment C provides a model formal test procedure. The model is to be used as a guide for the individual creating specific formal test procedures for AOTS software. Note that the model is very similar to the informal testing model discussed under unit level testing and integration level testing. Also note that this formal test procedure model is valid for both System Test Procedures and Acceptance Test Procedures. The following paragraphs describe the elements of the procedure and include instructions to be used by the author in making up the procedure.

Section I identifies the type of formal test procedure, full identification of the program to be tested, and the author of the test procedure. As the plan is revised, the revision author and

date should be filled in.

XIII SHEET .

Section II is scheduling information for the performance of the formal test. Enter a projection of the date when the test will start and how long will it take. Also enter the time necessary to develop the plan. This entry, as well as the projected test performance date and duration are for planning and scheduling purposes.

Section III specifies the resources required for conducting The software resource category identifies the the formal test. program executable to be tested and other programs that are necessary for the test. Identify the data base files required to test this program. Indicate what the state of these files should be, e.g. whether these files are required to contain a previously determined set of data, whether they should be empty, etc. test procedures may require a known data base to predict known test results. This resource category should reflect that. Identify what other test procedures need to be run prior to this procedure. This is important when test procedures need to be run in a certain order. For example, it may be necessary to run the Tenative MTL Test Procedure prior to running the MTL Editor Test Identify the hardware configuration for the test by Procedure. listing the required hardware. If the tester needs special qualifications to run the test, enter this data under the personnel requirements category. An example of this might be that the tester should be familiar with one of the AOTS supported Air Force Specialities. When special resources are required, such as a video disk or a drawing, enter this information under the "other" category.

Section IV describes the test. A high level overview of the test should be entered to explain the test. The functions provided by the program that the test procedure is to check should be listed. If there are program functions not tested by the procedure, then these should be listed together with the identification of the test procedure in which they are tested.

Section V lists the actions necessary to perform the test. The test sequence listed here details the input expected from the user, what output can be expected, and a cross reference as to what program function that this action applies to. The listed test sequence should be as exact as possible, in order to produce test consistency.

Attachment F is an example of an AOTS Formal Test Procedure to perform system testing on the task information field editing functions in the MTL Editor. This is to serve as an example only and is not intended to be complete.

4.1.5 System Test Report Model. Attachment D is a model AOTS

AOTS.STP D-19 V1.0/Feb.87

Formal Test Report. It is to be used as a guide to report on the execution of formal system tests and should be filled out by the individual performing the test during the process of, or immediately after, a system test.

Section I identifies the program tested and the person that did the test. The same report form is used to document results for a system level test and for an acceptance level test. Therefore mark the test level as appropriate. Fill in the test environment, as well as the date. The time duration of the test can be used for future planning purposes in system testing and should be entered as hours or minutes. If there is a test witness then the identity of that individual should be recorded.

Section II is the reason the test was performed. Is the test being performed on a newly developed program, for a program that has been enhanced, or as part of a release of other enhancements?

Section III is an indication of the test results. Was the outcome expected or unexpected? If the outcome was not as expected, then a description of the problem or the action to be performed should be furnished, either in this section or in the following worksheet. This area can also be used for notes or reminders if the test was successful.

Section IV is a worksheet for system testing. It is to be used to keep notes of test progress, as well as to keep track of possible discrepancies or questions.

- 4.2 Acceptance Test Planning. The intent of acceptance testing is to demonstrate that the software satisfies the set of predetermined acceptance criteria.
- 4.2.1 Acceptance Test Requirements. Acceptance Testing consists of performing test procedures designed to confirm that the software satisfies all the requirements set forth in the AOTS CPCI Development Specifications. Acceptance testing must show that the software performs in the operational environment, as it did in test environment. This includes using actual external interfaces.

Generally acceptance testing is performed when a system is delivered. In the case of AOTS, acceptance testing will be performed during the latter part of Phase II. Test results are documented, including any discrepancies found. Some discrepancies are permissible. The Air Force and DAC AOTS management must agree jointly upon the number and severity of permissible discrepancies.

4.2.2 Acceptance Test Responsibilities. The acceptance test procedures are prepared by the DAC AOTS software development

AOTS.STP D-20 V1.0/Feb.87

organization, in particular by the programmer(s) responsible for individual CPCs. This preparation is done after system testing has been performed on the CPC. The test procedure should define in detail the actual activities required to perform the test. It should include a description of what should be accomplished by the test, the inputs that are required, the outputs that are expected, and how the test is to be conducted. The acceptance test procedure is placed under configuration control after it is written and approved.

Conduct of the acceptance tests will be carried out by the DAC AOTS Instructional Technology Branch personnel. These individuals may be the same people that performed the system tests. They should be familiar with system and program requirements. The people who conduct an acceptance test will also be responsible for recording the test results.

Monitoring of acceptance tests will be performed by the DAC AOTS Program Manager or designee. This person's responsibility will be to verify the acceptance tests are being conducted according to procedures and that results are recorded.

The Air Force AOTS Program Manager, or representative, will witness acceptance tests.

Results of the acceptance tests are recorded in test reports. If the tests uncover deficiencies, these are also recorded in the test reports. As in system testing, all deficiencies found in acceptance testing are examined by the Software Technical Review Board. The board decides the extent of each deficiency and schedules the problem to be fixed or directs the deficiency and its ramifications to the Configuration Control Board.

Execution of an acceptance test procedure with expected and agreed upon results, as well as the generation of the corresponding test report, should result in acceptance of the program by the Air Force AOTS Program Manager.

- 4.2.3 Acceptance Test Schedule. The acceptance test schedule is specified in the AOTS Software Development Plan.
- 4.2.4 Acceptance Test Procedure Model. Attachment C provides a model formal test procedure. The model is discussed in paragraph 4.1.4. Sections I, II, III, and IV of the test procedures should be filled out accordingly.

Section V of the acceptance test procedure has the same format as the system test procedure. This section, the test sequence, should list the actions necessary to perform the test. The test sequence includes the input expected from the user, what output can be expected, and a cross reference as to what program

function that the actions apply to. However, the inputs and outputs listed in the acceptance test procedure are more descriptive than in the system test procedure. The reason for this is that since the acceptance test procedures can be used for demonstration purposes, the audience for the test procedure might not be familiar with the program being demonstrated.

Attachment G is an example of an AOTS Formal Test Procedure to perform acceptance testing on the MTL Editor. This is to serve as an example only and is not intended to be complete.

- 4.2.5 Acceptance Test Report Model. Attachment D is a model AOTS Formal Test Report. It is to be used as a guide to report on the execution of formal acceptance tests and should be filled out by the individual performing the test during the process of, or immediately after, an acceptance test. The sections of the model are discussed further in paragraph 4.1.5.
- 4.3 Formal Test Classes. The test classes for formal testing include functional requirement testing, interface testing, user input/cutput testing, file input/output testing, error condition testing, timing constraints, and capacity testing. The first six of these classes are verified by each system and acceptance test procedure for which the class is appropriate. AOTS capacity testing is verified by its own test procedure.
- 4.4 Formal Tests. Each AOTS CPCI will have a series of formal tests, both at the system and acceptance test level, designed to verify each CPC and interface required by the CPCI. The tests will be structured according to the models described in paragraphs 4.1.4 and 4.2.4. The paragraphs below identify these tests for the initial design and development effort. Further tests will be identified during the secondary design effort with an update to this document prior to the Critical Design Review for the total software effort.
- 4.4.1 Management CPCI Test Procedures. The Management CPCI Test Procedures will consist of the tests listed in Table 1. With each entry is a paragraph reference to the Management CPCI Development Specification. This reference specifies the functions to be performed and the requirements to be satisfied by the program and therefore to be tested by the test procedure. The actual test procedure will describe the test, the functions the procedure is to check, and the inputs and expected outputs to exercise the functions. Other entries in the table specify the levels of testing to be performed for each program and the test methods involved to check each program.

Table 1. Management CPCI Test Procedures

| Test | Test | 70S647411 | Test | Test |

Notes:

- 1. 70S647411 is the AOTS Management CPCI Development Specification. Items in this column are references to paragraphs in this specification.
- Test Level Codes: U=Unit, I=Integration, S=System, Ac=Acceptance
- 3. Test Method Codes: A=Analysis, I=Inspection, D=Demonstration, T=Test, R=Review
- 4. The remainder of this table will be developed in accordance with the AOTS phased software development concept.

4.4.2 Evaluation CPCI Test Procedures. The Evaluation CPCI Test Procedures will consist of the tests listed in Table 2. With each entry is a paragraph reference to the Evaluation CPCI Development Specification. This reference specifies the functions to be performed and the requirements to be satisfied by the program and therefore to be tested by the test procedure. The actual test procedure will describe the test, the functions the procedure is to check, and the inputs and expected outputs to exercise the functions. Other entries in the table specify the levels of testing to be performed for each program and the test methods involved to check each program.

- 4. The remainder of this table will be developed in accordance with the AOTS phased software development concept.

System Support CPCI Test Procedures. Many of the functional requirements of the System Support CPCI are considered tested as a result of the software development process and informal and formal testing of the Management and Evaluation CPCIs. Therefore these requirements need no separate test procedures. These requirements are listed ir Table 3 without a test procedure number, but instead a reference to note 4. The Support Test Procedures will test the remaining requirements of the System Support CPCI. The test procedures listed in Table 3 with a test procedure number identify these procedures. With each entry in Table 3 is a paragraph reference to the System Support CPCI Development Specification. reference specifies the functions to be performed and the requirements to be satisfied by the program and therefore to be tested by the test procedure, when a formal test procedure is applicable. The actual test procedure will describe the test, the functions the procedure is to check, and the inputs and expected outputs to exercise the functions. Other entries in the table specify the levels of testing to be performed for each program and the test methods involved to check each program.

Notes:

- 1. 70S647414 is the AOTS System Support CPCI Development Specification. Items in this column are references to paragraphs in this specification.
- Test Level Codes: U=Unit, I=Integration, S=System, Ac=Acceptance
- Test Method Codes: A=Analysis, I=Inspection, D=Demonstration, T=Test, R=Review
- 4. These functions are demonstrated to be performing properly as a result of other system and acceptance test procedures using the functions.
- 5. The remainder of this table will be developed in accordance with the AOTS phased software development concept.

- 4.5 Formal Test Levels. The levels of formal testing for AOTS are system level testing and acceptance level testing. These are discussed in paragraphs 4.1 and 4.2, respectively.
- 4.6 Formal Test Summary. Identification of formal tests is provided in Tables 1, 2, and 3 above. Additionally, these tables identify test levels, test methods, and program requirements. Test classes are identified, and checked, as necessary in each test procedure, with the exception of capacity testing, which has its own formal test procedure.
- 4.7 Formal Test Schedule(s). Refer to paragraph 4.1.3 for the System Test Schedule and paragraph 4.2.3 for the Acceptance Test Schedule.
- 4.8 Data Recording, Reduction, Analysis. The specification of data to be recorded, reduced, or analyzed in order for programs to be properly verified will be detailed in the system and acceptance test procedures for those programs. When the results of the data recording, reduction, or analysis is on hard copy, then this hard copy will be stored with the test reports, which are described in paragraphs 4.1.5 and 4.2.5.

A test log shall be kept when performing acceptance test procedures. All significant events will be reported chronologically on the test log. A completed test log is stored with the test report. A model test log is contained in Appendix E.

- 4.9 Formal Test Reports. Formal test report models are described in paragraphs 4.1.5 and 4.2.5.
 - 4.10 Resources Required for Formal Testing.
- 4.10.1 Facilities. The DAC facilities at Building 428 and the AFHRL IST facilities at Building 1808, both at Bergstrom AFB Austin, Texas, will be the locations at which formal testing will be performed. The AFHRL facilities at Building 587 Brooks AFB San Antonio, Texas, will be the location where the host computer for AOTS resides. No classified information will be processed in conjunction with the AOTS Phase II formal tests.
- 4.10.2 Personnel. Personnel required for the preparation of formal test procedures are members of the DAC AOTS Software Development Organization. An in-depth knowledge of the requirements and design of the CPC whose test is being planned is mandatory for the personnel.

Personnel required for conducting formal tests are members of the DAC AOTS Instructional Technology Branch. The personnel represent the Management Subsystem, Evaluation Subsystem, and IST Support group and must have the following qualifications:

- A. An in-depth knowledge of one or all subsystems;
- B. Familiarity with the user interface to automated functions for a subsystem;
- C. Understanding of data contents requirements for the automated functions.

Access to Bergstrom AFB is necessary for both groups of personnel, however, security clearances are not necessary.

- 4.10.3 Hardware. Hardware to be used for formal testing is as follows:
 - A. VAX 8600 located at Building 578, Brooks AFB;
- B. Zenith Z248 Personal Computers located at Buildings 428 and 1808, Bergstrom AFB;
- C. Printers, of the following types, located in Buildings 428 and 1808, Bergstrom AFB:
 - 1. Laser printers
 - 2. Color printers
 - 3. Dot matrix printers;
- D. Digitizing tablets, of the following types, located at Buildings 428 and 1808, Bergstrom AFB;
 - 1. 11x11 digitizers
 - 2. 20x20 digitizers;
- E. Optical Mark Readers located in Buildings 428 and 1808, Bergstrom AFB;
- F. Communication lines and equipment to link the above hardware.
- 4.10.4 Interfacing/Support Software. Software required for formal testing is as follows:
 - A. VAX/VMS operating system, including the utilities:
 - 1. Command Language
 - 2. EDT
 - 3. Linker
 - 4. Debug
 - 5. Run-time Library
 - B. DEC Ada Compiler
 - C. VAX-11 FORTRAN Compiler
 - D. VAX-11 MACRO Assembler
 - E. DEC Code Management System
 - F. MS-DOS, including the utilities
 - 1. Command Language
 - 2. Editor

- 3. Debug
- G. Alsys Ada Compiler
- H. Microsoft Macro Assembler
- 4.10.5 Source. The above resources are provided by AFHRL and DAC in support of the AOTS contract.
- 5. TEST PLANNING ASSUMPTIONS AND CONSTRAINTS. To help assure valid system level and acceptance level testing, it is assumed that actual AOTS data, e.g. Master Task List data, Behavioral Objectives, Test Items, etc., will be available to exercise the code. Until such time that this actual data is available, simulated versions of the data must be used for testing purposes.
 - 6. NOTES. Not Applicable.

AOTS.ATL

The Air Force components, locations, Air Force Specialties (AFSs), and organizations that will participate in the SLT%E for the AOTS are as follows:

1. Active Air Force, Bergstrom AFB, TX

AFS 426X2 - 67 CRS and 67 AGS

AFS 431X1 - 67 AGS and 67 EMS

AFS 732X0 - 67 CSG and 67 SPS

AFS 811X0 - 67 SPS

AFS 811X2 - 67 SPS

2. Air Force Reserves, Bergstrom AFB, TX

AFS 426X2 - 924 CAMS

AFS 431X1 - 924 CAMS

AFS 732X0 - 924 TFG

AFS 811X0 - 924 WSF

3. Air National Guard, Ellington ANGB, TX

AFS 426X2 - 147 CAMS

AFS 431X1 - 147 CAMS

AFS 732X0 - 147 CAMS/MSS

AFS 811X0 - 147 SPF

AFS 811X2 - 147 SPF

The following figure reflects for each Air Force component the numbers of personnel within each AFS and workcenter type that are to be involved in the SLT&E for the AOTS.

| INTRODUCTION | F- | 3 |
| BI-WEEKLY STATUS UPDATE REPORT | F- | 4 |

INTRODUCTION

This appendix contains a Primavera Bi-weekly MTP Status Update, showing the status of each MTP activity that is to occur during the month of the report.

The column headings in the report reflect the following:

ACTIVITY ID The ID number assigned to the activity.

ORIG DUR Original Duration. Number of days the activity was

projected to require.

REM DUR Remaining Duration. Number of days (from date of

report) that are estimated to be required to complete the activity. (If, at the time of the report, it has been determined that more time will be required than originally anticipated, it is conceivable that the number of days remaining could be

more than the number originally assigned.)

PCT Percent of the total activity that has been com-

pleted. (In the sample report, none has been completed because the projection is a beginning one.)

CODE Column for the individual responsible for carrying

out the activity to initial when the activity has

been completed.

ACTIVITY

DESCRIPTION Self-explanatory.

INTRODUCTION

This appendix contains sample schedules for events to occur in support of the System Level Test and Evaluation (SLT&E) for the Advanced On-the-job Training System (AOTS). Included are:

- 1. Action required to prepare for the SLT&E.
- 2. Time table for collection of SLT&E data after the prototype AOTS has been implemented.

APPENDIX H

BASELINE DATA COLLECTION PROCEDURES

| This Appendix describes the detailed procedures to be followed in acquiring the data to define the present state of Air Force On-the-job Training (ie., the "baseline") within the test workcenters at Bergstrom AFB and Ellington ANGB. The step-bystep procedures to acquire baseline data in the following areas, as well as Appendix E references, are included in this Appendix, as follows: |
|---|
| H.1 Test Subject Demographic Data |
| H.2 OJT records (E-7A & B) |
| AF Form 623 Folders Job Qualification Standards (JQS) |
| H.3 Quality Assurance Summaries (E-8A) |
| 67 TRW Quality Assurance Quarterly Summary 924 TFG Quality Assurance Quarterly Summary Ellington ANGB Quality Assurance Data |
| H.4 Security Police Quality Control Trend (E-8A) 29 |
| Quarterly Quality Control Trend Analysis |
| H.5 Weekly Inventory of Time Spent (WITS) Sheets (E-11A, 15A, 23B) |
| H.6 Base Crime Statistics (E-10A) |
| Base Crime Analysis Report |
| H.7 Aircraft Maintenance Data (E-9A) |
| MDC Report MILAP 480 Report |
| H.8 Baseline Surveys (E-20A) |

H.1 TEST SUBJECT DEMOGRAPHIC DATA

The state of the s

- H.1.1 <u>Data To Be Collected</u>. Test Subject Demographic Data consists of specific demographic data relating to each test subject and will be obtained from the AOTS PDS table.
- H.1.2 Requirements For Data Collection Representative (DCR). The DCR who will collect the data via the AOTS PDS table should be an IST SME from the 732X0 AFSC.
- H.1.3 Frequency Of Data Collection. Data collected via the AOTS PDS table will be collected once on each subject during the baseline data acquisition period.
- H.1.4 <u>Data Collection Procedure</u>. In order to obtain demographic data, the DCR will extract the applicable data from the AOTS PDS table.
- H.1.5 <u>Time Required For Data Collection</u>. Following are the time requirements for requesting and receiving the demographic data via the AOTS PDS table:
 - 0.12 mo Data input
- H.1.6 <u>Disposition Of Data</u>. When the DESIRE data is received, the DCR will deliver the product to the Data Input Representative (DIR). The DIR will have the data entered into the DESIRE data base.

H.2 OJT RECORD DATA

7.00

H.2.1 Data To Be Collected. Data relevant to trainees' progress and qualification on tasks that make up their duty positions will be collected as specified herein. These data are contained in Air Force Forms (AFFMS) 623, On-the-Job Training Records. AFFMS 623 are folders that contain various other documents, the most significant for our purposes being the Job Qualification Standard (JQS). The JQS is used to record training and qualification status. These records are maintained by trainees' immediate supervisors within operational workcenters. Related illustrations are as follows:

OJT Data Recording Form, Figure--H.2-1, p. 6 Specialty Training Standard (STS)--Figure H.2-2, p. 7

- H.2.2 Requirements For DCR. The training record data collection will require the expertise of an OJT training specialist (751X1). The only additional training required for the DCR will be a familiarization with the specific procedures for the data collection.
- H.2.3 Frequency of Data Collection. Data collection of the OJT record will be performed twice during Baseline: at the beginning and end of the Baseline period.
- H.2.4 <u>Data Collection Procedures</u>. The DCR will generate a list of all trainees and their data base identification numbers by use of AOTS PDS table. The DCR will use this list and OJT record data sources to perform the data collection procedures described below.
- H.2.4.1 <u>Data Locations</u>. The DCR will be provided access to the training records at each office by the point of contact (POC). Refer to Attachments 2, 3, and 4 at the end of Appendix H for POCs and addresses for obtaining training records.
- H.2.4.2 <u>Initial Collection</u>. The procedures used to record OJT task information are the same for all Air Force components (i.e., Active, Reserve, and National Guard) and Air Force Specialties (i.e. 426XX, 431XX, 732XX, and 811XX). The DCR will:
 - Obtain sufficient number of copies of OJT Data Recording Forms for trainees involved, plus extras for the purpose of adding new names as required.

- Coordinate access to the workcenter with the respective supervisor.

Market S. St.

- Obtain from the workcenter supervisor the training folders (AF Form 623) for all OJT trainees in the workcenter.
- Fill out the name of the COLLECTOR and circle the COMPO-NENT on the OJT DATA RECORDING FORM.
- Referring to the training folder, fill out the NAME of the individual and his/her SSAN.
- Enter the date the individual was assigned to the duty position. (Obtain this information from the individual or from the supervisor.)
- Locate the individual's JQS in the AF Form 623. The JQS consists of the STS/AF Form 797. The JQS is usually the top document on the right-hand side of the training folder.
- Enter the number of tasks for the individual's duty position in the TOTAL # TASKS CIRCLED DURING INITIAL COLLECTION block on the Data Recording Form. Count the number of circled tasks on the STS/AF Form 797 to determine the number to list.
- Enter the TOTAL # TASKS OPEN in the appropriate block.
- If individual is position qualified, enter the date the last open task was closed in the DATE POSITION QUALIFIED block of the heading of the OJT Data Recording Form.
- H.2.4.3 <u>Final Collection</u>. For the final data collection, the DCR will take with him/her the Data Recording Forms that were filled out during the initial collection.
 - The DCR will take a supply of blank Data Recording forms to the workcenter so that forms can be filled out for any new personnel assigned to the workcenter.
 - Refer to the information in the AF Form 623 to obtain necessary information for filling out the Data Recording Form. (For any new personnel, the DCR will follow the procedure listed above for initial collection).
 - Count and record the total number of tasks circled for the FINAL COLLECTION in an individual's STS/AF Form 797.

- Count and record, by month, the TOTAL # TASKS OPEN as shown on the individual's STS/AF Form 797.
- Count and record, by month, the TOTAL # TASKS CLOSED as shown on the individual's STS/AF Form 797.
- If individual is position qualified, enter the date of qualification in the designated block of the heading of the OJT Data Recording Form.
- H.2.5 <u>Time Required for Data Collection</u>. The estimated time requirements for the data collection differ for the initial collection and the final collection.
- H.2.5.1 <u>Initial Data Collection Time Requirements</u>: (man hours per DCR).

OJT records collection (per work center)

| 0.25 | Arrange data collection visits |
|------------|--------------------------------|
| 0.25 | Miscellaneous travel on-base |
| 12.25 ave. | Initial extract of task data |
| 1.00 ave. | Input data |

H.2.5.2 Final Data Collection Time Requirements.

OJT records Collection (per work center)

| 0.25 | Arrange data collection visits |
|-----------|--------------------------------|
| 0.25 | Miscellaneous travel on-base |
| 24.50 ave | Extract data |
| 1.00 ave | Input data |

H.2.6 <u>Disposition of Data</u>. The DCR will deliver the Data Recording Forms to the DIP; after the data has been input (except for the final time), the DCR will obtain, from the data input person, the forms for use in recording information during the next data collection procedure.

OJT DATA RECORDING FORM NAME:____ SSAN:_____ WORKCENTER: DATE ASSIGNED TO WORKCENTER:____ DATE POSITION QUALIFIED: TOTAL # TASKS CIRCLED DURING INITIAL COLLECTION: TOTAL # TASKS CIRCLED DURING MID COLLECTION:_____ TOTAL # TASKS CIRCLED DURING FINAL COLLECTION:_____ TOTAL # TASKS OPEN by month: TOTAL # TASKS CLOSED by month: Oct 87 Oct 87 _____ Nov 87 _____ Nov 87 _____ Dec 87 _____ Dec 87 _____ Jan 88 _____ Jan 88 ____ Feb 88 _____ Feb 88 _____ Mar 88 _____ Mar 88 _____ Apr 88 ____ Apr 88 May 88 _____ May 88 Jun 88 ____ Jun 88 _____ Jul 88 _____ Jul 88 _____ COMPONENT: Active Reserve ANG

PRIVACY ACT STATEMENT

COLLECTOR:

AUTHORITY: 44 USC 3101; 10 USC 8012 and EO 0307
PRINCIPAL PURPOSE: The SSAN will be used to identify personnel participating in the
Advanced On-The-Job Training System Prototype.

ROUTINE USES: 1. Determine effectiveness of the current OJT program. 2. Determine the effectiveness of the AOTS prototype.

DISCLOSURE IS MANDATORY: The SSAN is mandatory to make positive identification of individuals in relation to other personnel included in the AOTS prototype. Failure to provide this information will prevent monitoring of training related data, thereby jeopardizing the ability of AOTS to perform its mission.

Figure H.2-2

- H.3 67 TRW QUALITY ASSURANCE PROGRAM QUARTERLY SUMMARY, 924 TFG QUALITY ASSURANCE PROGRAM QUARTERLY SUMMARY, AND ELLINGTON QUALITY ASSURANCE DATA COLLECTION PROCEDURES
- H.3.1 Quality Assurance Program Quarterly Summary.
- H.3.1.1 <u>Data to be Collected</u>. The 67 TRW Quality Assurance (QA) Program Quarterly Summary will be sent directly to AFHRL. The active components use the summary to rate the quality of the aircraft maintenance, propulsion, and phase inspection workcenters. The DCR will be interested in three of the sections of the Quarterly Summary.
 - Section II, 67th Aircraft Generation Squadron; the subsection of interest is titled "12 Aircraft Maintenance Unit."
 - Section III, 67th Component Repair Squadron; the subsection of interest is the one titled "Propulsion Branch."
 - Section IV, 67th Equipment Maintenance Squadron; the subsection of interest is the one titled "Maintenance Branch."
- H.3.1.2 Requirements for DCR. The QA data collection personnel for Bergstrom AFB do not need a particular background experience but will require some training in the procedures for extracting data from the monthly summaries.
- H.3.1.3 Frequency of Data Collection. Quarterly.
- H.3.1.4 <u>Data Collection Procedure</u>. POC is MSgt Hendrickson, MAQ, building 1603. AFHRL will receive, quarterly, the

QA Quarterly Summary--Figure H.3-1, p. 13.

The DCR will turn to Section II - 67th Aircraft Generation Squadron, look under the subsection "12 AMU," and find the areas "Technical" and "Personnel."

(See Figure H.3-1a, p. 14.)

- Enter the totals from the technical inspections (E, S, U, TOTAL) onto the:

QUALITY ASSURANCE PROGRAM MONTHLY SUMMARY Data Recording Form--Figure H.3-2, p. 17

along the row titled "AMU". Ensure totals are recorded under the corresponding column headings of the Data Recording Form.

- Enter the totals from the "Personnel" section of the QA Program Quarterly Summary onto the QA Recording Form along the row titled "AMU" under the corresponding column headings. The numbers from the QA Program Quarterly Summary (Figure H.3-1a, p. 14) are circled to demonstrate which numbers to extract for the Baseline data collection.
- Jet Engine Intermediate Maintenance (JEIM): Data for the JEIM shop is contained in the report entitled "Propulsion Branch."
- Enter the totals for the section as circled on the example in

Figure H.3-1b, p. 15.

- Write these sums on the "Propulsion" row of the Data Recording Form under the corresponding column.
- Enter the numbers along the "TOTAL" row of the
 - QA Program Quarterly Summary--Figure H.3-1c, p. 16

onto the Data Recording Form along the row titled "Maintenance." (Figure H.3-2, p. 17)

- Ensure totals are recorded under the corresponding column headings of the Data Recording Form.

H.3.1.5 Time Required for Data Collection.

QA Quarterly Summary Collection (Bergstrom AFB)

- 0.33 IST SME looks over summary
- 0.75 DCR extract data from summary
- 0.13 Input data (Includes Reserves)

H.3.2 924 TFG Quality Assurance Program Quarterly Summary.

H.3.2.1 <u>Data to be Collected</u>. The 924 TFG QA Quarterly Summary is used by the Reserve component to rate the quality of aircraft maintenance, propulsion, and inspection workcenters. This report

is significantly different from the 67 TRW QA Quarterly Summary (active duty).

H.3.2.2 Requirements for the DCR. The requirements are the same as for the QA Quarterly Summary in Paragraph H.3.1.2.

H.3.2.3 Frequency of Data Collection. Quarterly.

H.3.2.4 <u>Data Collection Procedure</u>. Included is an example of the 924th TFG

Reserve Unit QA Quarterly Report--Figure H.3-3, p. 18.

 Add the numbers for the following types of inspections: Pre`Flight, Launch/EOR, 25 Hr Flight Line Inspection, Thru Flight/BPO, and Engine Bay Activities (boxed items).

(See Figure H.3-3a, p. 19.)

Record these sums on the Data Recording Form along the row titled "AMU" under the section of the form for the "Reserve" component (Figure H.3-2, p. 17).

- Enter the numbers from the engine installation line as before.

The Reserve Quality Assurance Office aggregates the data collected during personnel evaluations. Therefore, such data must be collected in aggregate form. The data collector must locate a chart in the Quarterly Report entitled:

PERSONNEL EVALUATION RATING--Figure H.3-3b, p. 20.

The information in the row labeled "TOTAL" is entered on the Data Recording Form on the row labeled "Reserves" in the "TOTAL, PASS, FAIL" boxes.

An example of the Quality Evaluation Inspection (QVI) for propulsion (see the quarterly charts labeled TYPE INSPECTION BY EQUIP-MENT is included in:

Figure H.3-3c p. 21.

- H.3.2.5 Time Required for Data Collection.
 - QA Quarterly Summary Collection (Bergstrom Reserves)
 - 0.33 IST SME looks over summary
 - 1.00 Extract data from summary
- H.3.3 Ellington ANGB Quality Assurance Data.
- H.3.3.1 <u>Data to be Collected</u>. The DCR will collect QA data from the QA files at Ellington ANGB.
 - H.3.3.2 Requirements for DCR. The DCR for the Ellington QA data should be an IST SME (426X2, 431x1) or someone trained by an expert on the collection of this raw QA data.
 - H.3.3.3 Frequency of Data Collection. Monthly.
 - H.3.3.4 <u>Data Collection Procedure</u>. The quality assurance data from the Air National Guard are collected from:

Air Force Forms 2419--Figure H.3-4, p. 22.

These forms are located in the QA Office at Ellington ANGB. The office is located in Building 1382, and the points of contact are either CMSgt McCoubrey or Betty Holt. The data from the AF Forms 2419 is processed as follows:

- H.3.3.4.1 Enter the QA data on the Data Recording Form (Figure H.3-2, p. 17).
 - A 431X1 SME will determine which AF Forms 2419 will be analyzed.
 - First, the workcenter being evaluated is identified. This is done by an examination of the (SHOP/BRANCH) identified in Block II of the AF Form 2419. For Baseline data collection purposes, the shops from which data will be collected are the Propulsion and the AMU.
 - If the name appears in Section 111, the AF 2419 was used in a personnel evaluation.
 - If the AF Form 2419 was used for a personnel evaluation:

Figure H.3-5, p. 23 (Block III),

record the "rating" indicated in block III on the Data

Recording Form under the appropriate heading of either Satisfactory (SAT) or Unsatisfactory (UN).

- If there is no entry in block III, this is considered a technical evaluation; and an entry should appear in Block IV:

Figure H.3-6, p. 24.

- Record all other evaluations on the Data Recording Form as follows:
 - -- Block V "RATING" provides the quality inspection rating. Indicate the rating on the Data Recording Form under the columns labeled "Technical Evaluations" (excellent, satisfactory, unsatisfactory).
 - -- When all the AF Forms 2419 prepared during the current month have been reviewed and the data has been recorded in the columns provided on the Data Recording Form, the DCR must sum each column on the Data Recording Form.

H.3.3.5 Time Required for Data Collection.

QA Data Collection (Ellington ANGB)

- 0.25 Arrange visit to workcenter
 0.25 Miscellaneous on-base travel
 5.00 Extract data from AF Form 2419
 0.10 Input data
- H.3.5 <u>Disposition of Data</u>. Once the Data Recording Forms have been completed and summed per the procedures above, the information is provided to the DIR. The DIR will have the totals contained on the Data Recording Form entered into the appropriate QA data table.

H.4 SECURITY POLICE QUALITY CONTROL TREND PROCEDURES

H.4.1 <u>Data to be Collected</u>. AFHRL will receive, each quarter the:

Security Police Quality Control Trend Analysis (Figure H.4-1, p. 26)

Data collected will be the average quarterly QC Evaluation scores of SPA, SPO, SPOL-A, SPOL-B, SPOL-C, and SPOL-D.

- H.4.2 Requirement for DCR. The DCRs for Security Police Quality Control Trend Analysis reports do not require specialized experience or training.
- H.4.3 <u>Frequency of Data Collection</u>. Security Police Quality Control Analysis data will be collected quarterly.
- H.4.4 <u>Data Collection Procedure</u>. AFHRL will receive the Security Police Quality Control Trend Analysis quarterly. The DCR will record information on the:

Security Police Quality Control Data Recording Form (Figure H.4-2, p. 27)

The following information will be recorded on the Recording Form in the appropriate columns and blank, as labeled:

- 1) Quarter.
- 2) Date.

MANUAL PROPERTY.

- 3) Average score of each flight.
- 4) DCR's name.
- H.4.5 <u>Time Requirements</u>. Time requirements for the collection of Security Police Quality Control Trend Analysis data are as follows:
 - .07 hr. Record information on Data Recording Form
 - .07 hr. Input data
- H.4.6 <u>Disposition of Data</u>. The DCR will deliver the completed Security Police Quality Control Data Recording Forms to the DIR. The DIR will then have the data entered in the Security Police Quality Control Data Table.

Figure H.4-2

- H.5 WEEKLY INVENTORY OF TIME SPENT (WITS) SHEET COLLECTION PROCEDURES
- H.5.1 <u>Data To Be Collected</u>. The WITS Sheets used for the baseline data collection are time sheets specifically designed by AFHRL for use in the AOTS baseline and SLT&E data gathering process. WITS sheets track the number of hours spent on a variety of specific training activities by various test subject personnel.
- H.5.2 Requirements For DCR. It is not necessary for the DCR to have a particular experience background. The DCR must be capable of following instructions and answering questions in the workcenters regarding the proper method for filling out WITS sheets. The DCR will also be required to perform simple addition on the time sheet.
- H.5.3 Frequency of Data Collection. WITS sheets will be filled out and collected biweekly for all Active Duty component workcenters at Bergstrom AFB. Test personnel in Active Duty workcenters will fill out a WITS sheet for every other week during the collection period. WITS sheets will be filled out and collected biweekly in the Reserve workcenters at Bergstrom AFB and the Air National Guard workcenters at Ellington ANGB. Reserve and Air National Guard personnel will fill out WITS sheets only on UTA weekends and annual tour.

H.5.4 Data Collection Procedure.

H.5.4.1 <u>Initial Data Collection Procedure</u>. In performing the required initial WITS sheet distribution and collection tasks, the following will be performed:

THE DCR WILL

- Obtain an appropriate number of WITS sheets, Instructions for filling them out, and Data Collection Coordination Worksheets to distribute to the field.
- Package WITS sheets, Instructions, and Data Collection Coordination Worksheets for distribution to POCs.
- Call a Briefing Meeting of all POCs for Actives and Reserves, to be held at Bergstrom.
- Conduct the Briefing Meeting, explaining data to be collected from workcenters, collection dates, details of

filling out WITS sheets, and responsibilities of POCs in WITS sheet collection--including accounting for all personnel who have not filled out a WITS sheet (TDY, transferred, etc). WITS sheet packages will be handed out to focal point personnel: DCR must be prepared to answer questions at this meeting.

- Travel to Ellington ANGB to hold another Briefing (same process as described above).

THE STAFF AGENCY FOCAL POINT AT THE UNIT WILL

 Distribute WITS sheets to the participants, collect them at the end of the appropriate week or time period, and fill out the Data Collection Coordination Worksheet to account for any WITS sheets that are missing.

THE DCR WILL

- Go to each staff agency focal point at Bergstrom to pick up completed WITS sheets and Coordination Worksheets at the end of the first week of WITS sheets' being filled out. Ellington WITS sheets and Coordination Worksheets will be mailed to DCR.
- Examine the Data Collection Coordination Worksheets to insure that all WITS have either been collected or have been listed with an acceptable reason for their absence. If there is a discrepancy, the DCR will check with the staff agency focal point to resolve the problem.
- Examine the face of the WITS sheets to insure that all blanks have been filled out, as appropriate.
- Perform a quick-look analysis to insure that figures are plausible.
- Deliver the WITS sheets to DIR for input to the appropriate data table.
- H.5.4.2 Routine Data Collection Procedure. In performing the required routine WITS sheet distribution and collection responsibilities, the following activities will be accomplished:

THE DCR WILL

- Obtain a sufficient number of WITS sheets, instructions for filling them out, and Data Collection Coordination Worksheets to fulfill requirements and make distribution to each staff agency focal point.

STAFF AGENCY FOCAL POINTS WILL

- Distribute WITS sheets to the participants, collect them at the end of the appropriate week or time period, fill out the Data Collection Coordination Worksheet to account for all WITS sheets that were distributed, and return both the WITS sheets and the Coordination Worksheet to the DCR.

THE DCR WILL

- Examine the Data Collection Coordination Worksheets to insure that all WITS have either been collected or have been listed with an acceptable reason for their absence. If there is a discrepancy, the DCR will check with the staff agency focal point to resolve the problem.
- Examine the WITS sheets to insure that the data appears feasible by checking the following:
 - -- Duty day is no more than 18 hours.
 - Time allotments within a given category are not identical throughout the week.
- H.5.4.3 General WITS Sheet Types And Delivery Instructions. There are three different types of test personnel who will fill out WITS sheets. In order to accommodate these three types of personnel, three types of WITS sheets have been developed. The types of WITS sheets and the Data Coordination Worksheet used in the data collection activity are:
 - 1) Commander WITS Sheets--Instructions on reverse side (Figure H.5-1, p. 34)
 - 2) Unit Training Manager WITS Sheets--Instructions on reverse side

(Figure H.5-2, p. 35)

3) Supervisor, Evaluator, Trainer, and Trainee WITS Sheets

(Figure H.5-3, p. 36)

4) Instructions--Supervisor, Evaluator, Trainer WITS Sheets (Trainee instructions on reverse side)

(Figure H.5-4, p. 37)

5) Data Coordination Worksheet--Figure H.5-5, p. 38

Commander WITS sheets are given to Squadron Commanders; Unit Training Manager WITS sheets are given to the base OJT Training Manager and the Unit Training Managers of the various workcenters. The workcenter personnel will receive the Supervisor, Evaluator, Trainer, and Trainee WITS sheets and will fill out the sections which apply to them.

Following are specific procedural instructions to be given to test subjects for filling out the appropriate type of WITS sheet:

The WITS sheet is a time sheet used to measure the amount of time that you typically spend on training or related activities. It is understood that in many cases you may act in more than one of the capacities listed below (for example, supervisor and trainer). If this is the case, it will be necessary to fill in the time spent in each of the roles that you play in OJT. If you are acting in more than one role at a time, record on your WITS sheet the time spent doing tasks principally related to a particular OJT role. In order to fill out a WITS sheet, enter your name and the date of the last day of the applicable workweek or time period.

Trainees: For each day of the week fill out blocks for Numbers 1, 10, 11, and any others that might apply.

Supervisors, Evaluators, or Trainers: For each day of the week fill out the blocks for Numbers 1 through 14 as they apply.

Unit Training Manager: For each day of the week fill out the blocks for Numbers 1 through 8 as they apply.

Squadron Commanders: For each day of the week fill out numbers 1 through 9 as they apply.

For WITS Sheet POCs, refer to Attachments 1, 2, 3, and 4 at the end of Appendix H. For participants who will fill out WITS Sheets, refer to the Attachments 2, 3, and 4, except for ANG and Base OJT: for those, include Attachment 1.

The total number of WITS Sheets required for the Active Duty Component workcenters at Bergstrom AFB for each collection activity (every two weeks) are:

- 5 Commander WITS Sheets
- 6 Training Manager WITS Sheets
- 172 Supervisor, Evaluator, Trainer, and Trainee WITS Sheets

The total number of WITS sheets required for the Reserve workcenters at Bergstrom AFB for each collection activity (once a month) are:

- 4 Commander WITS Sheets
- 4 Training Manager WITS Sheets
- 152 Supervisor, Evaluator, Trainer, and Trainee WITS Sheets

The total number of WITS sheets required for Ellington ANGB for each collection activity (once a month) are:

- 3 Commander WITS Sheets4 Training Manager WITS Sheets
- 4 Additional Training Manager WITS Sheets during UTA weekends 175 - Supervisor, Evaluator, Trainer, and Trainee WITS Sheets
- H.5.5 Time Required For Data collection.

UNIT COMMANDER JITS SHEET INSTRUCTIONS

The WITS (Weekly Inventory of Time Spent) sheet is a time sheet used to measure the amount of time that you typically spend on training or related activities during your duty day. Following are instructions for 'ling out the UNIT COMMANDER WITS sheet:

- I. Enter information at the top and bottom of your WITS sheet.
 - 1. Print your name--last, first, and middle initial.
 - 2. Fill in your workcenter number, e.g., 67th CSG/PDMQ.
 - 3. Fill in your SSAN.

The Company of the Company

- 4. Fill in the Week Ending date--the <u>last day</u> of the applicable work week or time period (might be UTA weekend).
- 5. DO NOT fill in Data Collector blank.
- II. Record all time to the nearest quarter hour, e.g., 8.25 hours, 2.75 hours.
- III. For each day of the week, fill out the blocks for Numbers 1 through 9 as they apply. Refer to the instructions below, as necessary.
- Block 1: Record number of hours in your duty day, whether it is the normal 8 hours or some different amount of time.
- Block ?: Actual time spent introducing and orienting the OJT program to supervisors, trainers, and trainees.
- Block 3: This is the time actually spent reviewing and judging the status of training programs.
- <u>Block 4</u>: Actual time spent evaluating progress of airmen in upgrade training who have reached evaluation points requiring the Commander's involvement.
- <u>Block 5</u>: Actual time spent evaluating trainees who fail to progress (Training Status Code "T") or who are not recommended for further upgrade training (Training Status Code "O") for possible separation from the service.
- Block 6: Actual time spent selecting unit personnel to perform third-party task evaluations.
- <u>Block 7</u>: Actual time spent interviewing, evaluating, and judging the potential of those who failed mandatory career development courses.
- <u>Block 8</u>: Actual time spent reviewing the documentation and judging the quality of third-party task evaluations.
- Block 9: Actual time spent reviewing documented evaluations of unit personnel from outside agencies.

In order to supply accurate information, it is important that you fill out the WITS sheet DAILY for the applicable time period.

UNIT TRAINING MANAGER WITS SHEET INSTRUCTIONS

The WITS (Weekly Inventory of Time Spent) sheet is a time sheet used to measure the amount of time that you typically spend on training or related activities during your duty day. It is understood that in many cases you may act in more than one of the capacities listed on the WITS sheet (for example unit training manager and trainer). If this is the case, it will be necessary to fill in the time spent in each of the roles that you play in OJT. If you are acting in more than one role at a time, record on your WITS sheet the time spent doing tasks principally related to a particular OJT role.

Following are instructions for filling out the UNIT TRAINING MANAGER WITS sheet:

- I. Enter information at the top and bottom of your WITS sheet.
 - 1. Print your name--last, first, and middle initial.
 - 2. Fill in your workcenter number, e.g., 67th CSG/PDMQ.
 - 3. Fill in your SSAN.
 - Fill in the Week Ending date--the <u>last day</u> of the applicable work week or time period (might be UTA weekend).
 - 5. DO NOT fill in Data Collector blank unless you have been assigned that duty.
- II. Record all time to the nearest quarter hour, e.g. 8.25 hours, 2.75 hours.
- III. For each day of the week, fill out the blocks for Numbers 1 through 8 as they apply. Refer to the instructions below, as necessary.
- <u>Block 1</u>. Record number of hours in your duty day, whether it is the normal 8 hours or some different amount of time.
- <u>Block 2</u>. These activities could include providing orientations to supervisors and trainees, overseeing completions of volume review exercises, issuing course materials, counseling trainees on their progress, and monitoring the overall progress of trainees in the CDC program.
- <u>Block 3</u>. These activities may include unscheduled evaluation visits to workcenters, formal evaluation of training effectiveness, and preparation of reports or memoranda for record.
- <u>Block 4</u>: Activities may include helping supervisors determine task performance requirements, overall workcenter requirements, or development of controls. These may also include teaching principles of training and advising on means to solve training difficulties.
- <u>Block 5</u>: Actual time spent working directly with the management of the upgrade training program as opposed to qualification training or other programs such as ancillary training. These activities may include documenting and fulfilling the administrative requirements of AFRSO-23.
- $\underline{Block 6}$: Any time spent with these agencies resolving training issues, scheduling training, arranging testing and evaluation, etc.
- Block 7: Actual time spent preparing agendas, conducting meetings, or composing/documenting minutes.
- Block 8: Time spent performing additional duties or details, either formally or informally assigned.

In order to supply accurate information, it is important that you fill out the WITS sheet DAILY for the applicable time period.

SUPERVISOR, EVALUATOR, TRAINER WITS SHEET INSTRUCTIONS

The WITS (Weekly Inventory of Time Spent) sheet is a time sheet used to measure the amount of time that you typically spend on training or related activities during your duty day. It is understood that in many cases you may act in more than one of the capacities listed on the WITS sheet (for example, supervisor and trainer). If this is the case, it will be necessary to fill in the time spent in each of the roles that you play in OJT. If you are acting in more than one role at a time, record on your WITS sheet the time spent doing tasks principally related to a particular OJT role.

Following are instructions for filling out the SUPERVISOR, EVALUATOR, TRAINER WITS sheet:

- Enter information at the top and bottom of your WITS sheet.
 - 1. Print your name--last, first, and middle initial.
 - 2. Fill in your workcenter number, e.g., 67th CSG/PDMQ.
 - 3. Fill in your SSAN.
 - Fill in the Week Ending date--the <u>last day</u> of the applicable work week or time period (might be UTA weekend).
 - 5. DO NOT fill in Data Collector blank unless you have been assigned that duty.
- II. Record all time to the nearest quarter hour, e.g., 8.25 hours, 2.75 hours.
- III. For each day of the week, fill out the blocks for Numbers 1 through 15 as they apply. Refer to the instructions below, as necessary.
- Block 1: Record number of hours in your duty day, whether it is the normal 8 hours or some different amount of time.
- <u>Block 2</u>: These activities might include planning, coordinating, and setting the date, time, and place for doing OJT on a task.
- <u>Block 3:</u> These activities might include planning, coordinating, and setting the date, time, and place for studying CDCs or other publications supporting OJT.
- Block 4: The actual time spent reviewing and recording task training.
- Block 5: The actual time spent reviewing and recording knowledge training.
- Block 6: These activities include the actual conduct of task training as a trainer.
- Block 7: These activities include the actual conduct of knowledge training as a trainer, classroom teacher,
- Block 8: Actual time spent evaluating trainee performance.
- Block 9: Actual time spent testing or reviewing knowledge training, e.g., volume review exercises, quizzes, etc..
- <u>Block 10:</u> Actual time spent as a trainee receiving career knowledge training through classroom, self-study, or CDC activity.
- Block 11: Actual time spent as a trainee receiving task-oriented instruction, practice, and evaluation.
- Block 12: Actual time spent as a supervisor selecting personnel to conduct training.
- <u>Block 13:</u> Actual time spent as a supervisor setting up the OJT for an individual or group. These activities may include determining task requirements, reviewing competence of a newly-assigned trainee, or revising the direction of the individual or group's OJT program.
- Block 14: Actual time spent receiving guidance from or providing information to the OJT managers.
- $\underline{\mathsf{Block}\ 15:}$ Actual time spent counseling trainees when difficulties arise or when trainee progress is inadequate.

In order to supply accurate information, it is important that you fill out the WITS sheet DAILY for the applicable time period.

Figure H.5-4

TRAINEE WITS SHEET INSTRUCTIONS

The WITS (Weekly Inventory of Time Spent) sheet is a time sheet used to measure the amount of time that you typically spend on training or related activities during your duty day. It is understood that in many cases you may act in more than one of the capacities listed on the WITS sheet (for example, supervisor and trainee). If this is the case, it will be necessary to fill in the time spent in each of the roles that you play in OJT. If you are acting in more than one role at a time, record on your WITS sheet the time spent doing tasks principally related to a particular OJT role.

Following are instructions for filling out the TRAINEE WITS sheet:

- 1. Enter information at the top and bottom of your WITS sheet.
 - 1. Print your name--last, first, and middle initial.
 - 2. Fill in your workcenter number, e.g., 67th CSG/PDMQ.
 - 3. Fill in your SSAN.
 - 4. Fill in the Week Ending date--the <u>last day</u> of the applicable work week or time period (might be UTA weekend).
 - 5. DO NOT fill in Data Collector blank unless you have been assigned that duty.
- II. Record all time to the nearest quarter hour, e.g., 8.25 hours, 2.75 hours.
- III. For each day of the week, fill out blocks for Numbers 1, 10, 11, and any others that might apply. Refer to the instructions below, as necessary.
- <u>Block 1</u>: Record number of hours in your duty day, whether it is the normal 8 hours or some different amount of time.
- <u>Block 10</u>: Actual time spent as a trainee receiving career knowledge training through classroom, self-study, or CDC activity.
- Block 11: Actual time spent as a trainee receiving task-oriented instruction, practice and evaluation.

In order to supply accurate information, it is important that you fill out the WITS sheet DAILY for the applicable time period.

H.6 BASE CRIME STATISTICS

H.6.1 Data To Be Collected. The 67 SPS will send AFHRL the

Base Crime Analysis Report (Figure H.6-1, p. 41)

each quarter. This analysis will include the number of incidents in the following categories: Crimes Against Persons, Crimes Against Property, Theft of Government Property, Theft Of Private Property, and Drug Incidents.

- H.6.2 <u>Requirements For DCR</u>. The DCR needs no special background or skills.
- H.6.3 Frequency Of Data Collection. Quarterly.
- H.6.4 Data Collection Procedure.
 - POC is the superintendent of the 67 SPS Reports and Analysis Branch.
 - IST support will come from TSgt Rick Booth, x3070.
 - After receiving the crime analysis reports, the DCR will obtain a
 - Security Police Crime Analysis Data Collection Form (Figure H.6-2, p. 42).
 - If the crime analysis reports are not received by the 7th of the month following their issuance, or the data appears incomplete or inaccurate, the DCR shall coordinate a personal visit with the Security Police Squadron to obtain the missing information.
 - The DCR will look at each category of crime separately and count the number of times Security Police response was made to that specific category.
 - DCR will put his name and the date in the appropriate blank.
- H.6.5 <u>Time Requirements For Data Collection</u>. Time requirements for the collection of Base Crime Statistics data areas follows:

| 0.25 | Obtain Data Recording Forms and Crime |
|------|--|
| | Analysis Reports |
| 0.50 | Record data onto Data Recording Form |
| 0.50 | Follow`up actions to remedy deficient data |
| 0.07 | Data input |

H.6.6 <u>Disposition Of Data</u>. After checking addition for accuracy, the DCR will deliver the data recording form to the DIR, who will have the data entered into the Base Crime Statistics data table.

Suesecr Crime Analysis for the Second Quarter of 1986 (APR-JUN)

Distribution "A"

- 1. The following is an analysis of crime and incident activities on Bergstrom AFB for the second quarter of 1986. Data contained in this report indicates crimes against persons or property, drug offenses, lost or stolen property and other security police reponses.
- 2. CRIME AGAINST PERSONS: Security Police responded to 2 aggravated assaults, 3 simple assaults, 2 domestic disturbances, 1 obscene phone call, 2 false official statements and 2 child neglect cases.
- 3. CRIMES AGAINST PROPERTY: Security Police responded to 2 housebreakings, 1 auto theft and 17 cases of vandalism. Vandalism increased from 13 cases last quarter to 17 this quarter. Six involved government property and 11 involved private property. The following buildings and their parking lots were the targets of vandalism incidents: Dorms 2002, 2311, 2103, 2104, 2403, BLDG 1643, 2226, 3514, 4865, parking lots of 2104, 2401, 2410, 2700, and 239 Anderson Lane, 759-B Robin Lane, 5125 McWhirk in the housing area.
- 4. THEFT OF GOVERNMENT PROPERTY: There were 12 thefts this quarter. For time and dates of each occurrence refer to attachment 1. The total amount of government property reported stolen is \$1,549.72 with \$1,297.32 recovered.
- 5. THEFT OF PRIVATE PROPERTY: There were 46 reported thefts this quarter, of these, 11 were shoplifting cases. The total amount of private property stolen is \$19,641.08 with \$10,130.69 recovered.
- 6. DRUGS: There were 15 drug related incidents this quarter. Six were at the $\overline{\text{main gate}}$, 7 were at the commercial gate, 1 at the visitors reception center parking lot, and 1 at the commissary parking lot.

- H.7 MDC/MILAP 480 REPORT COLLECTION PROCEDURES
- H.7.1 <u>Data To Be Collected</u>. The MDC and MILAP 480 Reports are generated by the 67th TRW DCM/MASA office. These reports provide a detailed tracking of maintenance activities performed by the various workcenters at Bergstrom AFB. These reports are only generated for the Active component.
- H.7.2 Requirements For DCR. Both a DCR and a subject matter expert (SME) are required. The data collector will not require any specific experience background. The SME will require background in either 426X2 or 431X1 AFSs.
- H.7.3 Frequency Of Data Collection. Data from the MDC and MILAP 480 reports will be collected monthly.
- H.7.4 Data Collection Procedure
- H.7.4.1 <u>Data Locations</u>. The MDC and MILAP 480 reports are sent by the 67th TRW DCM/MASA office to AFHRL/OL-AK in Trailer T-1.
- H.7.4.2 MDC Potential Repeat Action Identification. The MDC and MILAP 480 reports will be provided by DCM/MASA upon the request of the DCR. The POC and document location are:

Building: 1603

Room: 18

POC: MSgt Winkleman

Ext: 3348/9

The DCR will request and obtain five MDC and one MILAP 480 Report from the location listed above. It takes approximately two to three days for MASA to generate the reports once they have been requested. The reports will cover the following areas:

- 1) 431X1 within the 12th AMU for A flight
- 2) 431X1 within the 12th AMU for B flight
- 3) 426X2 within the 12th AMU for Specialist Flight Propulsion
- 4) 426X2 within 67th CRS Jet Engine Intermediate Maintenance
- 5) 431X1 within the 67th EMS Phase shop Inspection

Once he has the reports, DCR will review each report to identify potential repeat maintenance actions. The potential repeat maintenance actions may be determined in the following manner

(See Figure H.7-1, p. 48):

- Determine the workcenter to which each report applies.
- Locate the PWC column. Use the following table to identify which report is associated with which workcenter.

| PWC | WORKCENTER |
|-------|------------------------------------|
| DG111 | 12th AMU A FLIGHT (431X1) |
| DG112 | 12th AMU B FLIGHT (431X1) |
| DG501 | 12th AMU SPECIALIST FLIGHT (426X2) |
| DE210 | 67th EMS MAINTENANCE/PHASE (431X1) |
| DR210 | 67th CRS JEIM (426X2) |

MODVOENTED

- Write the workcenter name on the front of the MDC computer report. It is necessary to identify the workcenter with the reports. The purpose is to track how many maintenance repeat actions occur for the five shops:
 - 1) 12th AMU (431X1), A Flight
 - 2) 12th AMU (431X1), B Flight
 - 3) 12th AMU (431X1), Specialist Flight
 - 4) 67th CRS JEIM (426X2)
 - 5) 67th EMS MAINTENANCE/PHASE (431X1)
- To accomplish this, the DCR will review the contents of the columns labeled:
 - 1) WUC (work unit code)
 - 2) JCN (job control number)
 - 3) ID (engine serial or aircraft tail number)
 - 4) HM
 - 5) UNITS
- The DCR will review these columns and highlight those records which meet the following criteria:
 - a) ID = Same
 - b) WUC = Same, unless first digit = 0
 - c) JCN = Different
 - d) HM = Same
 - e) UNITS = Consecutive 1s
 - f) DAY = TBD by SME

If these conditions are met

(See Figure H.7-2, p. 49),

then highlight that record (row). Proceed through each

of the documents looking for records to meet these test conditions. Another example of possible repeat maintenance actions is shown in

Figure H.7-3, p. 50.

An example of a situation that would <u>not</u> qualify is shown in

Figure H.7-4, p. 51.

The situation would not qualify because even though both actions have the same WUC and different JCNs, they were accomplished on different engines (IDs).

Once the repeat maintenance actions have been highlighted, the data collector will give the reports to the SME.

H.7.4.3 Identification Of Actual Repeat Maintenance Actions On The MDC. The SME will review the highlighted actions and indicate those items he/she believes are repeat actions by placing an asterisk in the right-hand margin. When the SME is finished, the DCR will obtain the reports and count the number of asterisks in each report. The total number of repeat actions for the five specific shops:

- 1) 12th AMU A and B Flights (431X1): two MDC reports added together
- 2) 12th AMU (431X1), Specialist Flight (426X2)
- 3) 67th CRS JEIM (426X2)
- 4) 67th EMS Maintenance shop (431X1) PWC=DE210 added together

These totals will be recorded using the

MDC/MILAP Data Collection Form--Figure H.7-5, p. 52.

H.7.4.4 MDC Data Disposition. The DCR will provide the summary data collection memo to the DIR.

The DIR will record the number of repeat maintenance actions for the month for each workcenter in the appropriate data table.

H.7.4.5 MILAP 480 Potential Repeat Action Identification. The MILAP 480 reports will be provided by DCM/MASA upon request of the DCR. the POC and document location is:

Building: 1603 Room: 18 POC: MSgt Winkleman

Ext: x3348/9

The DCR will obtain a monthly MILAP 480 Report from the location listed above. It takes approximately two to three days for MASA to generate the report once it has been requested.

The MILAP 480 Report, Figure H.7-6, p. 53,

is used as an additional measure for obtaining an accounting of repeat maintenance actions. In this respect, it is similar to the MDC reports.

The major differences between the MILAP 480 and the MDC reports are:

- 1) MILAP 480 pertains only to AMU (431X1 or specialist flight) actions
- 2) The formats are different
- 3) MILAP 480 identifies actions at the aircraft level per pilot reports.

After the report is obtained, the DCR will highlight those items which may indicate repeat maintenance actions.

In order to highlight repeat maintenance actions, the DCR must look at two columns of information on the report. The two columns are:

- 1) Sortie Seq-NBR
- 2) Rep-Rec

The Sortie-Seq-NBR column identified which maintenance unit services the aircraft. This study is concerned with those Sortie-Seq-NBRs that begin with a two (2). The two (2) identifies the 12th AMU.

The Rep-Rec identifies the type of occurrence. This study is only concerned with those incidents coded:

- 1) C, which is recurring discrepancy
- 2) R, which is repeat discrepancy
- 3) A, which is repeat plus abort
- 4) B, which is recurring plus abort

Thus, the two criteria the DCR uses to highlight a record are:

a) that the Sortie-Seq-NBR begins with a 2 or a 4, and

b) that the Rep-Rec code be a \underline{C} , \underline{R} , \underline{A} , or \underline{B} .

Once the DCR has highlighted the MILAP 480 Report, the SME will examine the report and identify actual repeat maintenance actions.

H.7.4.6 <u>Identification Of Actual Repeat Maintenance Actions On The MILAP 480 Report</u>. The SME will provide expertise in making a final assessment determining whether highlighted actions are in fact repeat maintenance actions. If the SME decides that the actions are repeat maintenance actions, he will place an asterisk (*) in the right-hand column.

The DCR will then count up the number of asterisks for the 12th AMU and write that total in the Repeat Maintenance Count block on the Data Collection Form.

Examples of correct and incorrect highlighted repeat actions are shown in

Figure H.7-7, p. 54.

The first highlighted event is correct, i.e. Sort-Seq-NBR is $\underline{217}$ and the Rep-Rec code is \underline{B} . The second event highlighted is \underline{in} -correct because the Sort-Seq-NBR is $\underline{721}$, even though the Rep-Rec is an \underline{R} . Figure H.7-6 (p. 53) presents another example of a correctly highlighted page.

H.7.5 <u>Time Requirements</u>. The DCR will ask for, receive, and review this data on a monthly basis. The time requirement for the collection, evaluation and recording of data is as follows:

MDC/MILAP 480 Report Monthly Collection

| 0.25 Miscellaneous travel on-base 0.16 Pick-up reports 1.50 Data collector highlights rep 0.75 IST SME reviews highlighted i | - |
|--|-----|
| 0.16 Pick-up reports 1.50 Data collector highlights rep | |
| | |
| | ort |
| TOT DIED TOTACHD HEADILETCH I | |
| 0.50 Extract data from reporc | |
| 0.12 Input data | |

H.7.6 MDC/MILAP 480 Data Disposition. When the MILAP 480 Report has been completed and the asterisk count included in the MDC/MILAP 480 Report Data Recording Form, the form will be provided to the DIR.

The DIR will enter the MILAP 480 repeat incident count into the data table.

H.8 BASELINE SURVEYS

- H.8.1 <u>Data To Be Collected</u>. The Prototype AOTS Baseline Surveys are survey instruments that are distributed to all workcenter personnel prior to the start of SLT&E. The surveys are designed to measure the current OJT environment concerning the level of computer experience, views and opinions regarding training and OJT, and the availability of operational equipment for use in the OJT process. There are three types of Baseline Surveys, each tailored to a particular audience:
 - 1) Commanders--Figure H.8-1, p. 57
 - 2) Training Managers--Figure H.8-2, p. 61
 - 3) Supervisors, Evaluators, Trainers, and Trainees Figure H.8-3, p. 69
- H.8.2 Requirements For DCR. The DCR who administers the Baseline Surveys does not require a specific experience background.
- H.8.3 <u>Frequency Of Data Collection</u>. Baseline Surveys will be administered once near the end of the baseline data acquisition period, at all AOTS and control workcenters.
- H.8.4 <u>Data Collection Procedure</u>. For POCs, participants, and locations for the administration of Baseline Surveys, refer to Attachments 3 and 4 at the end of Appendix H and (for control workcenters) Attachments at the end of Appendix J.

The following steps must be followed in order to administer the Baseline Survey:

- Brief all OJT and unit training managers on the purposes and uses of the Baseline Surveys and the administration and collection procedures.
- Identify workcenter commanders; training managers; and supervisors, evaluators, trainers, and trainees.
- Photocopy sufficient copies of the survey for the intended workcenter.
- Assemble surveys and answer sheets for each person.

- Attach appropriate name labels to each survey.
- Group them according to component and workcenter.
- Give survey packets to the appropriate OJT manager who will give them to each unit training manager for distribution, completion, and return to the OJT manager.
- H.8.5 <u>Time Required For Data Collection</u>. The time requirement for the administration and collection of Baseline Surveys is as follows:

Baseline Survey administration and collection (One workcenter at Bergstrom)

1 00 Brief training managers
1.25 Copy and prepare surveys for distribution
0.25 Miscellaneous travel on-base

Baseline Survey administration and collection (One workcenter at Ellington)

- 1.00 Brief training managers
 0.50 Review survey questions
 0.25 Copy and prepare surveys for distribution
 0.25 Miscellaneous travel on-base
- H.8.6 <u>Disposition Of Data</u>. After the Baseline Surveys have been administered, the DCR will deliver the completed surveys to the CTM, who will have the results scanned by AFHRL/TS and entered into the Baseline Survey data tables.

PRIVACY ACT STATEMENT

AUTHORITY: 44 USC 3101: 10 USC 8012 AND E0 0307
PRINCIPAL PURPOSE: The SSAN will be used to identify personnel participating in the Advanced On-the-job
Training System Prototype.
To determine the effectiveness of the current OJI program.
DISCLOSURE IS MANDATORY: The SSAN is mandatory to make positive identification of individuals in relation
to other personnel included in the AOIS prototype. Failure to provide this information will prevent
required monitoring of training related items which will jeopardize the ability of the AOIS program to perform its mission.

DIRECTIONS: On the accompanying answer sheet, please enter your name (in the "Name Grid" block) and SSAN (in the "Numeric Grid" block, columns 1 through 9). Indicate your response to each question by filling in the corresponding oval for each question.

Note: Computer use does not include the use of a hand calculator.

Have you ever used a computer?

a - Yes b - No

IF YOU ANSWERED NO, GO TO QUESTION NUMBER 7.

2. Do you use a computer in your job?

b - No

Have you ever owned a computer?

a - Yes

b - No

How comfortable do you feel using a computer?

a - Very comfortable

b - Comfortable

c - Neither comfortable nor uncomfortable

d - Uncomfortable

e - Very uncomfortable

Have you ever received instruction where the information was presented on a computer?

a - Yes

How would you rate your computer-based learning experience?

a - N/A, haven't received any instruction through a computer

b - Outstanding

c - Excellent

d - Satisfactory

e - Marginal

f - Unsatisfactory

PLEASE USE THE FOLLOWING DEFINITIONS TO ANSWER QUESTIONS ON THE FOLLOWING PAGES:

MANAGING UPGRADE TRAINING PROGRAM: Work directly associated with the status of personnel in upgrade training. Examples are maintaining the Monthly OJT Roster, entering personnel into training, adjusting training dates, processing skill level upgrades and withdraws from training, and performing upgrade trainee orientations.

CONDUCTING/REPORTING STAFF ASSISTANCE VISITS: All activities supporting planning for, actually conducting, and documenting both informal and formal staff assistance visits, when required.

MANAGING THE CDC PROGRAM: Ensuring proper CDCs are ordered for upgrade trainees, processing reenrollments and enrollment extensions, and ensuring other administrative CDC requirements are met, as required.

COORDINATING WITH CBPO AND OUTSIDE AGENCY FUNCTIONS: Working with CBPO concerning on-the-job training matters effecting promotions, classification, retraining, discharges/separations, etc. Coordinating (scheduling people and places) with FTD, Base Education, etc.

ASSISTING SUPERVISORS/COMMANDERS: Providing assistance to develop and use training plans, identify training requirements, understand and use the ISD process, select task evaluators, and provide advice on other OJT matters.

ORGANIZING/CONDUCTING MEETINGS: Preparation for, conducting, and documenting required OJT meetings.

<u>DAILY SUPERVISORY ACTIVITIES</u>: Normal supervision and management of workcenter personnel.

ADMINISTRATIVE ACTIVITIES: Routine processing of computer system transactions and normal paperwork flow through the workcenter such as read files, memos for record, forms preparation, answering telephones and taking messages, etc.

- 9. What is your rank?
 - Amn-SrA a.

MSqt e.

b. Sqt f. SMSqt

c. SSqt q. CMSqt

17. On the average, what percent of your on-the-job time do you spend in training-related activities?

Consider your answer to question 17 as a block of time. Now indicate how this time is distributed among each activity listed below. Your answers will be the relative percent of your training time you spend on each activity. The total of questions 18-25 should equal 100%. It may be helpful to first write in your numerical percentages directly on the survey in the spaces provided. Then, using the scale above, enter the appropriate letter response on your answer sheet. Be sure your responses equal 100% Refer to the previous page for definitions of each activity.

THIS IS A DESCRIPTION OF AN AUTOMATED TRAINING SYSTEM. Consider the system to be fully operational. No knowledge of computer programming or computer languages are necessary to use the system. Delivery is over existing computer terminals. This system is used with other computer systems in the Air Force, like those within personnel or maintenance.

<u>POSITION-LEVEL TASK INFORMATION:</u> The focus of the training system is on the specific tasks performed in each position in a workcenter or shop. Along with a description of each task are given the knowledges and skills needed to perform the task, the standard for successful performance, a suggested training method, and a recommended order for training the tasks. In addition, other types of training requirements are identified. For example, ancillary training, CDCs, or training for additional duties.

COMPUTERIZED TRAINING RECORD: A training record on each airman is kept on file in the computer and contains a list of what the airman has been trained on, the training method used, the date the training was completed, and the scores for any tests or performance checks. Supervisors, commanders and OJT managers can review these training records at any time. They use the up-to-date information from both the airman's training record, and the position task requirements to identify where additional training may be needed.

AUTOMATIC SCHEDULING AND UPDATING: Once an airman's training requirements are identified, a training plan is automatically generated and he/she is scheduled for the training. Portions of the training are available to be conducted "on line", that is the trainee follows lessons and takes tests directly on the computer. Computer programs exist within the system to assist supervisors in developing more localized training lessons and evaluation materials should they be necessary. When a lesson is completed, the date and test results are automatically recorded in the airman's computerized training record. Other tasks are trained "off-line", or away from the computer. In this case, supervisors record their evaluations of trainee performance on special computer-read forms so the information can be automatically entered into the airman's record.

THIRD-PARTY EVALUATIONS: Sometimes an airman's performance on tasks is evaluated by persons other than his/her trainer. These "third party" evaluations are scheduled automatically, depending on several things, like the importance or difficulty of the task. The dates and results of these performance checks are automatically entered into the individual training record using computered forms like those for other "off-line" evaluations.

STANDARDIZED TRAINING PRACTICES: This automated training system standardizes many aspects of the training process. Whenever tasks are the same (on one base or between bases) the methods used to train individuals, evaluate their proficiency, and document the results should be the same. The "third party" evaluations also help insure trainees are performing tasks appropriately.

OTHER USES OF THE TRAINING INFORMATION: The training information stored in the computer system is used in several additional ways. For example, managers can identify the tasks for a specific position and then identify all the persons who are currently qualified to perform the tasks. This information can be used to help select the best person for a job or TDY, select persons for specialized training or to attend PME courses, and for reporting

unit readiness. In addition, this information can help uncover areas where many people need training leading to a new training program or changes to the current one.

Below are several aspects of the automated OJT system as described on the previous page. For each, indicate what you feel its value would be to you as an OJT manager. Use the following scale for questions 26-33:

| NO | MODERATE | EXTREME |
|-------|----------|---------|
| VALUE | VALUE | VALUE |
| a b | c d e | f q |

- 26. Training histories on individual airmen
- 27. The more task-level information than provided in current STS
- 28. The standardized training practices
- 29. The standardized evaluation procedures
- 30. The automatic documentation of training
- 31. Providing training on some tasks via the computer
- 32. Providing evaluation on some tasks via the computer
- 33. The automatic scheduling of training

After carefully considering how the system described on the previous page could affect what you do as an OJT manager, indicate how you might change the <u>time</u> you spend on each training activity. If, for example, you believe you would spend a little more time "managing the CDC program" than you do now, then you could select option g, "increase 20%."

- no change increase 20% ď. decrease 100% (no longer done) increase 40% h. decrease 80% increase 60% i. decrease 60% increase 80% d. j. decrease 40% increase 100% (double) e. k. more than doubled decrease 20%

PROTOTYPE AOTS BASELINE SURVEY

EUPERVISORS, EVALUATORS, TRAINERS, AND TRAINEES

PRIVACY ACT STATEMENT

AUTHORITY: 44 USC 3101; 10 USC 8012 AND EO 0307
PRINCIPAL FURPOSE: The SSAN will be used to identify personnel participating in the Advanced On-the-job
Training System Prototype.
The SSAN will be used to identify personnel participating in the Advanced On-the-job
Training System Prototype.
The SSAN is mandatory to make positive identification of individuals in relation
To other personnel included in the ADIS prototype.
The SSAN is mandatory to make positive identification of individuals in relation to other personnel included in the ADIS prototype.
The SSAN is mandatory to make positive identification of individuals in relation to other personnel included in the ADIS prototype.
The SSAN is mandatory to make positive identification of individuals in relation to other personnel included in the ADIS prototype.
The SSAN is mandatory to make positive identification of individuals in relation to other personnel included in the ADIS prototype.

The SSAN is mandatory to make positive identification of individuals in relation to other personnel participation.

DIRECTIONS: On the accompanying answer sheet, please enter your name (in the "Name Grid" block) and SSAN (in the "Numeric Grid" block, columns 1 through 9). Indicate your response to each question by filling in the corresponding oval for each question.

Note: Computer use does not include the use of a hand calculator.

Have you ever used a computer? a - Yes b - No

IF YOU ANSWERED NO. GO TO QUESTION NUMBER 7.

- Do you use a computer in your job? a ~ Yes b - No
- Have you ever owned a computer? 3. a - Yes b - No
- How comfortable do you feel using a computer?

a - Very comfortable

b - Comfortable

c - Neither comfortable nor uncomfortable

d - Uncomfortable

e - Very uncomfortable

Have you ever received instruction where the information was presented on a computer?

a - Yes

oN - d

How would you rate your computer-based learning experience?

a - N/A, haven't received any instruction through a computer

b - Outstanding

c - Excellent

d - Satisfactory

e - Marginal

f - Unsatisfactory

```
Have you ever taken any computer classes?
     a - Yes
     b - No
    How often do you play video games?
     a - Daily
     b - Weekly
     c - Monthly
     d - Yearly
     e - Never
9.
     What is your rank?
     a.
          AB
                               d.
                                    SrA
     b.
          Amn
                               e.
                                    Sqt

40. Generally, how do you evaluate an airman's performance prior to certifying the task in the training record? (Choose the <u>ONE</u> method you <u>USE</u> most often.)

a. Ask the airman if he/she has performed the task

b. Review the final outcome of the task

- c. Ask the airman to explain what he/she did in performing the task
- d. Observe the airman perform the task in the normal course of duty
- e. Check the airman's progress at points throughout the task
- f. Wait long enough to insure the airman has done the task at least once
- g. Ask others who work more closely with the airman to evaluate his/her performance
- h. Set aside a time for the airman to perform the task other than in the normal course of duty
- i. Other

The state of the state of

41. Do you document OJT for those persons in job qualification training?

- a. Yes
- b. No
- C. N/A, supervise no one in job qualification training

- 42. What is the primary method you use to identify individual training needs? (Choose the <u>ONE</u> method you use <u>MOST</u> often.)
 - a. Review the airman's training record
 - b. Interview the airman and ask him/her what he/she has done before
 - c. Ask the airman to describe how he/she would perform particular tasks
 - d. Have the airman actually perform particular tasks
 - e. Ask peers or other supervisors what they think
 - f. Other

والمنافقة المنافقة والمنافقة

Using the following scale, indicate how important you feel training is (in general, not to you particularly) to each of the areas given below.

| NOT IMPORTANT | MODERATELY | EXTREMELY |
|---------------|------------|-----------|
| AT ALL | IMPORTANT | IMPORTANT |
| ab | cde | fg |

- 43. Retention beyond the first term
- 44. Initial decision to enter the Air Force
- 45. Job satisfaction
- 46. Safety
- 47. Morale/Motivation
- 48. Accomplishment of the mission

Below are several specific training-related functions or activities you may engage in as a supervisor or trainer. Review the definitions for each function before completing questions 49-56.

PROVIDE TRAINING/SELECT TRAINERS: Activities associated with directly providing task knowledge and/or task proficiency training for both upgrade and qualification trainees. Also include time spent selecting qualified trainers to provide training on your behalf.

EVALUATE TRAINING: Evaluating task knowledge and/or task proficiency for certification or recertification purposes for both upgrade and qualification trainees. This can be for your subordinate personnel or as a third party evaluator of other personnel.

MANAGING CAREER DEVELOPMENT COURSES (CDCs): Ensuring timely progression and completion of CDC volumes including Volume Review Exercises and Course Examinations and the review training required for each.

<u>DEVELOP TRAINING PROGRAM</u> Developing Master Training Plans, task breakdowns, checklists, training schedules, determining training methods, advising trainers of correct training procedures, etc.

COORDINATE WITH UNIT OJT MANAGER: Activities conducted with or through the Unit OJT Manager concerning OJT program procedures, documentation assistance, initiation of upgrade or other training/personnel actions, scheduling of training events, participation in formal or informal OJT visits, etc.

COUNSEL TRAINEES Counseling personnel experiencing training problems.

<u>DOCUMENT TRAINING</u> Documentation of AF Forms 623 and all related documents for upgrade or qualification trainees and fully qualified personnel, maintenance/updating of MMICS/CAMS/AICARS or other automated training system products, completing Training Quality Reports (AF Form 1284), and miscellaneous training documents and forms.

USE THE PERCENTAGE SCALE BELOW TO ANSWER QUESTIONS 49-56.

| a. | zero | f. | 25g. | 30 | k. | 60 |
|----|------|----|------|----|----|-----|
| b. | 5 | g. | 35h. | 35 | 1. | 70 |
| c. | 10 | h. | 35i. | 40 | m. | 80 |
| d. | 15 | i. | 40j. | 50 | n. | 90 |
| e. | 20 | i. | 50k. | 60 | 0. | 100 |

49. On the average, what percent of your on-the-job time do you spend in training-related activities?

Consider your answer to question 49 as a block of time. Now indicate how this time is distributed among each activity listed below. Your answers will be the relative percent of your training time you spend on each activity. The total of questions 50-56 should equal 100%. It may be helpful to first write in your

numerical percentages directly on the survey in the spaces provided. Then, using the scale above, enter the appropriate letter response on your answer sheet. Be sure your responses equal 100% Refer to the previous page for definitions of each activity.

| 56. | Documenting training | |

THIS IS A DESCRIPTION OF AN AUTOMATED TRAINING SYSTEM. Consider the system to be fully operational. No knowledge of computer programming or computer languages are necessary to use the system. Delivery is over existing computer terminals. This system is used with other computer systems in the Air Force, like those within personnel or maintenance.

<u>POSITION-LEVEL TASK INFORMATION:</u> The focus of the training system is on the specific tasks performed in each position in a workcenter or shop. Along with a description of each task are given the knowledges and skills needed to perform the task, the standard for successful performance, a suggested training method, and a recommended order for training the tasks. In addition, other types of training requirements are identified. For example, ancillary training, CDCs, or training for additional duties.

COMPUTERIZED TRAINING RECORD: A training record on each airman is kept on file in the computer and contains a list of what the airman has been trained on, the training method used, the date the training was completed, and the scores for any tests or performance checks. Supervisors, commanders and OJT managers can review these training records at any time. They use the up-to-date information from both the airman's training record, and the position task requirements to identify where additional training may be needed.

AUTOMATIC SCHEDULING AND UPDATING: Once an airman's training requirements are identified, a training plan is automatically generated and he/she is scheduled for the training. Portions of the training are available to be conducted "on line", that is the trainee follows lessons and takes tests directly on the computer. Computer programs exist within the system to assist supervisors in developing more localized training lessons and evaluation materials should they be necessary. When a lesson is completed, the date and test results are automatically recorded in the airman's computerized training record. Other tasks are trained "off-line", or away from the computer. In this case, supervisors record their evaluations of trainee performance on special computer-read forms so the information can be automatically entered into the airman's record.

THIRD-PARTY EVALUATIONS: Sometimes an airman's performance on tasks is evaluated by persons other than his/her trainer. These "third party" evaluations are scheduled automatically, depending on several things, like the importance or difficulty of the task. The dates and results of these performance checks are automatically entered into the individual training record using computered forms like those for other "off-line" evaluations.

STANDARDIZED TRAINING PRACTICES: This automated training system standardizes many aspects of the training process. Whenever tasks are the same (on one base or between bases) the methods used to train individuals, evaluate their proficiency, and document the results should be the same. The "third party" evaluations also help insure trainees are performing tasks appropriately.

OTHER USES OF THE TRAINING INFORMATION: The training information stored in the computer system is used in several additional ways. For example, managers can identify the tasks for a specific position and then identify all the persons who are currently qualified to perform the tasks. This information can be used to help select the best person for a job or TDY, select persons for specialized training or to attend PME courses, and for reporting unit readiness. In addition, this information can help uncover areas where many people need training leading to a new training program or changes to the current one.

Below are several aspects of the automated OJT system as described on the previous page. For each, indicate what you feel its value would be to you as a Supervisor. Use the following scale:

| NO | MODERATE | EXTREME |
|-------|----------|---------|
| VALUE | VALUE | VALUE |
| a | b c d e | f g |

- 57. Training histories on individual airmen
- 58. The more task-level information than provided in current STS
- 59. The standardized training practices
- 60. The standardized evaluation procedures
- 61. The automatic documentation of training
- 62. Providing training on some tasks via the computer
- 63. Providing evaluation on some tasks via the computer
- 64. The automatic scheduling of training

After carefully considering how the system described on the previous page could affect what you do as a Supervisor, indicate how you might change the <u>time</u> you spend on each training activity. If, for example, you believe you would spend a little more time "managing the CDC program" than you do now, then you could select option g, "increase 20%."

- a. no change increase 20% b. decrease 100% (no longer done) h. increase 40% c. decrease 80% increase 60% i. d. decrease 60% increase 80% j. increase 100% (double) e. decrease 40% k. f. decrease 20% more than doubled 1.
- 65. Providing training or selecting trainers
- 66. Evaluating performance
- 67. Managing CDCs
- 68. Developing training programs
- 69. Coordinating with OJT Managers
- 70. Counseling trainees
- 71. Documenting training

Figure H.8-3

APPENDIX I

DATA BASE MANAGEMENT SYSTEM (DBMS)

This Appendix describes the structure of the DBMS for baseline data that can be expanded to store System Level Test and Evaluation (SLT&E) data. These data structures will be used to develop the appropriate code within the ORACLE data base development environment.

I.1 DATA BASE ADMINISTRATION

A tightly administered DBMS will protect the data base from mishandling and data loss. In order to maintain the integrity and validity of the data collected during the baseline acquisition period, the following data base administration plan is recommended.

- I.1.1 <u>Data Base Manager</u>. The DAC Test Manager (DTM) will act as the data base manager of the Baseline Data Base Management System. To insure the integrity of the system, the DTM will have final responsibility for the loading and physical safety of the system (hardware, software, and data). The number of personnel involved in data entry tasks should be kept to a minimum. This will allow for less user entry error and provide the DTM with a tighter accounting of the source of data entry errors.
- I.1.2 <u>Data Base Administrator (DBA)</u>. Ball Systems Engineering will provide a DBA. The DBA will be responsible for maintaining the data base system. The DBMS is designed in ORACLE commercial data base management software. ORACLE data base maintenance requires an individual familial with the intricate workings of ORACLE and Structured Query Language programming. The maintenance will include allocating data storage and memory to data tables, modifying code structures as required, and designing any new table systems.
- I.1.3 Data Base Backup System. The backup system for the data base management system will be a tape backup system. The tape backup system to be procured should allow the DTM to run a daily backup of entered data. This tape backup procedure will take approximately 2-3 minutes. The backup technique includes a rotation system such that three backup tapes are used sequentially. If there is ever a problem with a tape, the next tape behind in the sequence will contain all but the data backed up the previous day.

I.1.4 Quality Control System. The DTM is responsible for setting up a quality control system including steps for validating data in the computerized data bases. The data base screens will be designed to be near replications of the data recording forms from which data is entered. Following are examples of activities that the DTM can institute in the data base quality control program:

- Check each data recording form with the data entry screen after data from each data recording form has been entered into the system.
- Retrieve 3% of the records in each data base each quarter and compare them to their original data recording forms.

I.2 DATA BASE MANAGEMENT SYSTEM REPORTS

The DBMS is designed with the capability to produce user generated ad hoc reports. The ad hoc reporting system will allow system users to query the data base for information based on any conditions. This capability will be primarily used by the DAC Test Manager in performing "Quick-Look Analysis" on the data. At its inception, the DBMS will not provide any standard reports. As needs are defined, the Data Base Administrator will design into the system any standard reports desired by the DAC Test Manager.

I.3 DATA BASE MANAGEMENT SYSTEM COMPONENTS

The overall design of the DBMS includes five data table systems. Below are the following systems and the specific tables included within those systems.

- DESIRE Listing Data Table System
 - DESIRE ID Table
 - DESIRE Demographic Table
- Weekly Inventory of Time Spent (WITS) Sheets Data Table System
 - Unit Commander WITS Table
 - Unit Training Manager WITS Table
 - Supervisor/Evaluator/Trainer/Trainee WITS Table
- Air Force Training Records Data Table System
 - Security Police Training Records Table

- Jet Engine Training Records Table
- Aircraft Maintenance Training Records Table
- Personnel Training Records Table
- 4) Quality Assurance Data Table System
 - BAFB Active Quality Assurance Summary Table
 - BAFB Reserve Quality Assurance Summary Table
 - EANGB Quality Assurance Summary Table
 - Security Police Quality Control Summary Table
- 5) Repeat Maintenance Action Data Table System
 - MDC/MILAP 480 Table
- 6) Base Crime Statistics Data Table System
 - Base Crime Analysis Report Table
- 7) Survey Data Table System
 - Commander Baseline Survey Table
 - OJT Manager Baseline Survey Table
 - Supervisor, Evaluator, Trainee, and Trainee Baseline Survey Table

I.4 DATA BASE MANAGEMENT SYSTEM STRUCTURAL DESIGN

The Baseline DBMS is designed using ORACLE commercial data base design software. ORACLE's design capabilities are based on the IBM standard Structured Query Language (SQL). Data bases designed using SQL are organized into data storage tables. The logical design of the SQL table is in rows and columns. The columns of the table represent the data fields; the rows of the table represent the records in the table. The overall DBMS design is broken into table systems that store data of a particular type.

I.4.1 <u>DESIRE Listing Data</u>. DESIRE listing data will be stored in two SQL tables. The first table will store data from the DESIRE listing relative to the specific identification of a particular individual. Data from this first table will be utilized in linking records on specific individuals in other data tables. The second table will store some additional identification data and a great deal of demographic data relative to that individual. The two tables relating to an individual subject will be linked using the Social Security Number field. The detailed table designs follow.

DESIRE ID TABLE (Table Personnel)

| Field Name | <u>Width</u> | <u>Type</u> | <u>Description</u> |
|--|--------------|---|---|
| SSAN RANK WORK CTR | 9 2 8 | CHAR NOT NULL CHARACTER CHARACTER | Subject's Social Sec. No. Subject's Rank Subject's Workcenter |
| Highest Total Bytes/Record Total Estimated Number of Records Highest Total Overall Bytes | | | 19 525 9,975 |

DESIRE DEMOGRAPHIC TABLE (TABLE DESIRE)

| Sec. No. |
|---------------------------------------|
| me |
| ondition |
| t Code |
| ber |
| |
| |
| |
| |

| ning |
| aining |
| _ |
| Level |
| Level |
| Level |
| Level |
| |
| |
| |
| |
| ning ainin Leve Leve Leve |

The DESIRE system (both linked tables) will be used to link all other tables in the DBMS that store data relative to a specific identifiable individual. The Social Security field will

be used to provide this link. This will allow for storing only the Social Security Number of an individual in any records relative to that individual and providing additional personal information from the DESIRE system. Details on the specific linked systems and the mechanics of the particular links will be provided in the discussions relative to those systems.

I.4.2 <u>Weekly Inventory Of Time Spent (WITS) Sheet Data</u>. Weekly Inventory Of Time Spent (WITS) Sheet data will be stored in three different SQL tables. There are three different types of WITS sheets that will be administered. There is a table for storing each type of existing WITS sheet. The detailed designs of those WITS data tables follow.

UNIT COMMANDER WITS TABLE (TABLE CMDR_WITS)

| Field Name | <u>Width</u> | Type | <u>Description</u> |
|---|--------------|--|---|
| SSAN WK_ENDING CATEG_ONE CATEG_TWO CAT_THREE CATEG_FOUR CATEG_FIVE CATEG_SIX CATEG_SEVEN CATEG_EIGHT CATEG_NINE | 99555555551 | CHARACTER DATE NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER NUMBER | Subject's Social Sec. Air Force Training Records Data. Air Force training records are collected for all test AFSs and each of the three Air Force components. The Air Force Training Records system will consist of four SQL data tables. The design of the table system provides one table for each test AFS. Each table will store data relative to the individual test subject's training record. detailed table definitions for the AF Training Records system follow.

I.4.5 Repeat Maintenance Action Data. Data relative to the number of repeat maintenance actions occurring on aircraft assigned to the maintenance test workcenters is collected from the MDC and MILAP 480 reports. The MDC and MILAP 480 data will be stored in one SQL data table. The detailed table definitions for the Repeat Maintenance Action Data system follow.

MDC/MILAP 480 REPORT TABLE (Table: MDC_MILAP_RPT)

| Field Name | <u>Width</u> | <u>Typ</u> e | Description |
|--|--------------|------------------------------------|---|

| Highest Total Bytes/Record Total Estimated Number of Records Highest Total Overall Bytes | | | 28 4 112 |

- I.4.7 <u>Survey Data</u>. The results of all surveys administered during the baseline data acquisition period will be stored in the Survey Data System. There will be three types of surveys administered. The data collected from these surveys will be stored in three data tables corresponding to each type of survey.
- I.4.7.1 <u>Baseline Commander Survey Data</u>. The results of the Baseline Commander Surveys will be stored in the Baseline Commander Survey Table. This single table will store all of the identifying data and responses taken from the surveys. The Baseline Commander Survey table will be linked to the DESIRE sys-

tem through the Social Security Number field. This will allow detailed information regarding the individual survey respondent to be accessed. The detailed design of the table follows.

BASELINE COMMANDER SURVEY TABLE (Table:

| Field Name | <u>Width</u> | Typ9 | <u>Description</u> |
|------------|-----------------|-----------|---------------------------|
| NAME | 27 | CHARACTER | Name of Respondent |
| SSAN | 2 <i>,</i> 9 | CHARACTER | Subject's Social Sec. No. |

I.5 DATA BASE LOGICAL STRUCTURE

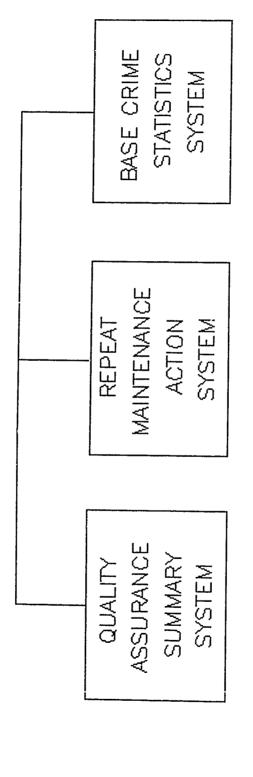

The logical structure of the AOTS Baseline Data Base Management System is divided into two table sets:

Workcenter Data Table Set--Figure I.6-1, p. 21 Test Subject Data Table Set-- Figure I.6-2, p. 22

The Test Subject set contains tables specifically related to individual test subjects. In the context of this system, each record in the Test Subject set relates to one individual WITS sheets are filled out by specific individuals, training record data is collected on specific individuals). Each subject in the baseline data collection will have a DESIRE Listing The DESIRE Listing record will include all of the necessary identifying information on the individual. The DESIRE Listing record contains, among other data elements, the individual's Social Security Number. All of the files in the Test Subject set have the Social Security Number as a data element. This allows all of the records relative to an individual to be linked together and to be linked back to the DESIRE Listing record. This allows demographic information (including the individual's first and last name, workcenter, etc.) to be entered into the system only once.

The Workcenter Test set contains data tables that store data relative to the workcenters. These table records cannot be tracked to a specific individual, only to a particular workcenter.

WORKCENTER DATA TABLE SET LOGICAL TABLE STRUCTURE

APPENDIX J

SYSTEM LEVEL TEST AND EVALUATION (SLT&E)

DATA COLLECTION PROCEDURES

This appendix describes methodologies to be used during Phase III SLT&E to collect data from the AOTS experimental and control groups at Bergstrom AFB and Ellington ANGB and from non-participant observers from representative MAJCOMS. The methodologies include the administration of several surveys and the continued collection of the Baseline data, excluding the administration of the Prototype AOTS Baseline Survey.

The surveys to be administered during SLT&E include:
Opinion Surveys to be administered to Supervisors, Training
Managers, Trainers and Evaluator

Acceptance Surveys to be administered to Commanders, Supervisors, Training Managers, Trainees, Trainers and Evaluators

Deployment Surveys to be administered to Commanders, Supervisors, Training Managers, Evaluators, and Trainers

Observer Surveys to be administered to visitors attending a two day AOTS demonstration

The Baseline data collections extended during SLT&E include:
Test Subject Demographic Data
OJT Records Data
Quality Controls Data
Aircraft Maintenance Data
Base Crime Statistics Data
WITS Sheets Data

A cross reference to the critical issues and subquestion(s) in Appendix E and pages for step-by-step procedures to obtain SLT&E data are as follows:

SECTION I: SLT&E SURVEYS

| J.1 | SLT&E OPINION SURVEYS |
|-----|---|
| | Trainee Performance (E-12) |
| | Training & Evaluation Requirements (E-16A) |
| | Trainee Qualifications (E-17A) |
| | Use of AOTS Products for Trainee Qualifications (E-17B) |
| | Evaluation Methods for Workcenters (E-18A) |
| | Management of Availability of Qualified Trainers |

| J.2 | (E-21A)Enhancement of Trainer Effectiveness (E-22A)Management of Training (E-23A)Instructional Technology (E-24A) ACCEPTANCE SURVEYS |
|------|---|
| | Capabilities for Authoring Training Materials (E33A) |
| J.3 | AOTS DEPLOYMENT INTERVIEW/SURVEY (E-25A) 40 |
| J.4 | OBSERVERS SURVEY |
| | SECTION II: SLT&E PROCEDURES CONTINUED FROM BASELINE |
| J. 5 | TEST SUBJECT DEMOGRAPHIC DATA 61 |
| J. 6 | OJT RECORDS (E-7A, E-7B) |
| J. 7 | QUALITY ASSURANCE SUMMARIES (E-8A) 65 |
| J. 8 | SECURITY POLICE QUALITY CONTROL TREND (E-8A) 66 |
| J. 9 | AIRCRAFT MAINTENANCE DATA (E-9A) 67 |
| J.10 | BASE CRIME STATISTICS (E-10A)68 |
| J.11 | WTTS SHEETS (E-11A E-15A E-23B) 69 |

SECTION III: SLT&E COMPLIANCE PROCEDURES

| J.12 | EXTERNAL ENTITIES INTERFACES (E-5A) | 70 |
|-------|-------------------------------------|----|
| J.13 | RESPONSE PERFORMANCE (E-5B) | 76 |
| J.14 | HARDWARE RELIABILITY (E-5C) | 78 |
| J. 15 | HARDWARE MAINTAINABILITY (E-5D) | 82 |
| л 16 | SVSTEM AVAILABILITY (F-SE) | ΩΟ |

Section I: SURVEYS

J.1 SLT&E OPINION SURVEYS

J.1.1 <u>Data To Be Collected</u>. The Opinion Surveys are designed to collect opinions from AOTS participants on whether AOTS is better, worse, or no different from conventional OJT. SLT&E Opinion Surveys consist of data collected from three sources as follows:

Supervisors--Figure J.1-1, p. 8
Training Managers--Figure J.1-2, p. 14
Trainers/Evaluators--Figure J.1-3, p. 16

If a person acts as both a Supervisor and an Evaluator or as both a Supervisor and a Trainer, he/she should be categorized as a Supervisor.

Using a response scale ranging from A to G, the respondents are asked to indicate how strongly they oppose or favor the effects of AOTS. Areas covered, with Appendix E references, are as follows:

Mission Readiness (E-10B)
Trainee Performance (E-12A)
Training & Evaluation Requirements (E-16A)
Trainee Qualifications (E-17A)
Use of AOTS Products for Trainee Qualifications (E-17B)
Evaluation Methods for Workcenters (E-18A)
Management of Operational Equipment (E-19A)
Management of Availability of Qualified Trainers (E-21A)
Enhancement of Trainer Effectiveness (E-22A)
Management of Training (E-23A)
Instructional Technology (E-24A)

- J.1.2 Requirements for DCR. The DCR must have the ability to administer surveys individually or in a group administration.
- J.1.3 <u>Frequency of Data Collection</u>. The Opinion Surveys will be administered one time during the third quarter of SLT&E (May 1989)
- J.1.4 <u>Letters of Request</u>. Prior to administering the surveys, the DCR will submit a letter to the Squadron Commander requesting all AOTS participants attend the Opinion Survey administration event. Squadron Commanders and location are found in Attachment 1 to Appendix J.

- J.1.5 Administration of Surveys. The DCR will administer the surveys. The DCR will:
 - Obtain a sufficient number of # 2 pencils, Optical Mark Reader (OMR) sheets and Opinion Surveys (Supervisor, Training Manager, and Trainer/Evaluator) for distribution to the scheduled AOTS participants.
 - Attend and supervise the administration event.
 - -- Administer the surveys in a room free from distractions
 - -- Distribute the surveys and OMR sheets to each participant
 - -- Provide instructions for completing the surveys (see sample instructions below)
 - -- Allow the respondents to leave and return to the administration area without the surveys (Surveys should remain with the DCR while respondents are absent from the survey administration area)
 - -- Answer any questions pertaining to the completion of the forms
 - -- Review ALL OMR sheets before the respondents leave the administration area and ensure that:

The correct SSAN is entered

The correct Answer Sheet number is entered

All question and statement responses are entered

-- Collect all pencils, surveys and OMR sheets after the surveys have been completed

SUGGESTIONS FOR ADMINISTERING SURVEYS

- Administer more than one type (Opinion, Acceptance, Deployment) of surveys at the same administration event when appropriate
- Allow for errors (bring extra copies of surveys and OMR sheets)
- Administer the surveys in a classroom, conference room or theatre
- Apply a ratio of one DCR to approximately 15 respondents
- Administer surveys to personnel from multiple workcenters at a central location when possible
- Read the following SAMPLE INSTRUCTIONS to the respondents

THE PURPOSE OF THIS SURVEY IS TO DETERMINE HOW PERSONNEL IN THE WORKCENTERS, WHO HAVE OPERATED THE AOTS, FEEL ABOUT THE SYSTEM. USING THE ACCOMPANYING OMR SHEET, INDEPENDENTLY RESPOND TO ALL QUESTIONS AND STATEMENTS. NOTE THAT SOME STATEMENTS MAY APPEAR TO BE IDENTICAL TO OTHERS BUT AFTER CLOSER EXAMINATION YOU WILL SEE THAT EACH STATEMENT REFERS TO A DIFFERENT TOPIC. READ EACH STATEMENT CAREFULLY BECAUSE SOME STATEMENTS FAVOR AOTS AND SOME FAVOR CONVENTIONAL OUT. AFTER YOU HAVE RESPONDED TO ALL OF THE STRUCTURED STATEMENTS, USE THE BACK OF THE SURVEY TO REPORT ANY COMMENTS OR SUGGESTIONS THAT YOU HAVE ABOUT AOTS. BE HONEST AND TAKE AS LONG AS YOU WANT TO RESPOND TO THE SURVEY.

SAMPLE LETTER FOR SCHEDULING PERSONNEL FOR SLT&E SURVEYS

REPLY TO

ATTN OF: AFHRL/OL-AK

SUBJECT: AOTS Survey Administration

TO: 67 AGS/CC

1. Request the following personnel be scheduled to report to Building T-1 (across from Bldg 1604) at 1300 hrs on 29 Feb 1988. The individuals will be asked to respond to surveys regarding their involvement with the prototype Advanced OJT System (AOTS). These appointments should take approximately 1 hour.

| Captain Hays, Jeffrey D. | FR000923847 | 12th AMU, | В | Flight |
|--------------------------|-------------|-----------|---|--------|
| CMSgt Singleton, Joseph | FR555223671 | 12th AMU, | Α | Flight |

JACK L. BLACKHURST, Major, USAF Commander, AFHRL/OL-AK

J.1.6 Time Required for Data Collection.

- 1.5 hrs. per workcenter--AFHRL distribute/collect surveys
- 1.0 hrs. per workcenter--Input data into AOTS data table
- 1.0 hr. per individual--Complete surveys
- J.1.7 <u>Disposition of Data</u>. After the surveys have been collected, DCR will conduct a quick-look analysis of the results to insure the integrity of the data entered by the respondents. The following plan will be followed:
 - Verify that all SSANs are entered and that the SSANs correspond with the names and SSANs on the list of incumbents.
 - Verify that all response marks on each OMR sheet are within the tolerance limits for the optical scanner.
 - Verify that each form's demographic data meets the standards set on the sample OMR sheet for the same survey.

If records are found to be out of tolerance or with error, the DCR will return the OMRs to the respondent for immediate correction.

ACCURATE records will be given to the Data Input Representative (DIR) for data input.

<u>DIRECTIONS</u>: On the accompanying answer sheet, please enter: your NAME in the "NAME GRID" block, your SSAN in columns 1-9 of the "NUMERIC GRID" block, number 04 in columns 24/25 of the "NUMERIC GRID" block.

Indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your answer or opinion.

Read every statement VERY carefully before selecting the response option that matches your opinion.

- 1. AS A SUPERVISOR, WHAT CATEGORY OF TRAINEES HAVE YOU BEEN OBSERVING DURING THE DEPLOYMENT OF THE AOTS PROTOTYPE?
 - A. ONLY TRAINEES TRAINED UNDER AOTS
 - B. TRAINEES TRAINED UNDER AOTS AND TRAINEES TRAINED UNDER CONVENTIONAL OUT

Unless otherwise instructed, use the following set of response options to indicate your opinions:

A B C D E F G

STRONGLY NEUTRAL STRONGLY
DISAGREE AGREE

- 2. TRAINEES ARE BETTER ABLE TO PERFORM TASKS WHEN TRAINED UNDER AOTS THAN WHEN TRAINED UNDER CONVENTIONAL OJT.
- 3. TRAINEES ADAPT MORE QUICKLY TO CHANGING MISSION DEMANDS WHEN TRAINED UNDER AOTS THAN WHEN TRAINED UNDER CONVENTIONAL OJT.
- 4. PEOPLE IN MY WORKCENTER MAKE MORE MISTAKES PERFORMING TASKS AFTER BEING TRAINED UNDER AOTS THAN AFTER BEING TRAINED UNDER CONVENTIONAL OUT.
- 5. TRAINEES ARE BETTER ABLE TO MEET MISSION READINESS REQUIREMENTS AFTER BEING TRAINED UNDER AOTS THAN AFTER BEING TRAINED UNDER CONVENTIONAL OJT.

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 6. TASK TRAINING IS MORE THOROUGH UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 7. TRAINEES HAVE A BETTER UNDERSTANDING OF TASK PERFORMANCE REQUIREMENTS UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 8. THE USE OF TRAINING MATERIALS DELIVERED VIA THE AOTS HAS INCREASED THE TRAINEES' ABILITY TO PERFORM TASKS.
- 9. TRAINEES REQUIRE LESS SUPERVISION WHEN PERFORMING TASKS AFTER BEING TRAINED UNDER ACTS THAN AFTER BEING TRAINED UNDER CONVENTIONAL OUT.
- 10. TRAINEES RETAIN KNOWLEDGE AND SKILLS LONGER WHEN TRAINED UNDER AOTS THAN WHEN TRAINED UNDER CONVENTIONAL OJT.
- 11. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO DETERMINE TRAINING REQUIREMENTS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 12. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO IDENTIFY TASK EVALUATION STANDARDS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 13. REMEDIAL TRAINING REQUIREMENTS FOR TASKS ARE MORE EASILY IDENTIFIED UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 14. I AM LESS ABLE TO IDENTIFY SPECIFIC TRAINING NEEDS WHEN I USE THE RESULTS FROM THE AOTS TASK PERFORMANCE EVALUATIONS THAN WHEN I USE THE RESULTS FROM CONVENTIONAL OJT EVALUATIONS.
- 15. I CAN KEEP TRACK OF A TRAINEE'S PROGRESS TOWARD TASK PROFICIENCY BETTER USING AOTS PROCEDURES THAN USING CONVENTIONAL OUT METHODS.
- 16. AOTS BEHAVIORAL OBJECTIVES CLEARLY INDICATE THE REQUIRED STANDARD OF TASK PERFORMANCE.

| A | B | C | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 17. I AM BETTER ABLE TO DETERMINE A TRAINEE'S QUALIFICATIONS USING TASK STATEMENTS WRITTEN UNDER AOTS THAN STATEMENTS WRITTEN UNDER CONVENTIONAL OUT.
- 18. AOTS PRODUCTS, SUCH AS AIRMAN TRAINING RECORDS (ATRS), ARE MORE HELPFUL THAN CONVENTIONAL OJT PRODUCTS IN DETERMINING TRAINEE QUALIFICATIONS.
- 19. AOTS EVALUATION STANDARDS ARE $\underline{\text{TOO HIGH}}$ FOR THE TASKS PERFORMED IN MY WORKCENTER.
- 20. AOTS EVALUATION INSTRUCTIONS ARE CLEAR AND EXPLICIT.
- 21. AOTS TESTS CONTAIN ENOUGH DETAIL TO ADEQUATELY DETERMINE TRAINEE QUALIFICATIONS:
- 22. AOTS TESTS COVER STEPS AND PROCEDURES THAT DO NOT REQUIRE EVALUATION.
- 23. QUALIFIED TRAINERS ARE MORE EASILY IDENTIFIED UNDER ACTS THAN UNDER CONVENTIONAL OUT.
- 24. TRAINERS ARE ABLE TO MANAGE MORE TRAINEES UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 25. TRAINERS ARE ABLE TO IDENTIFY AVAILABLE TRAINING MATERIALS MORE READILY UNDER ACTS THAN UNDER CONVENTIONAL OJT.
- 26. TRAINERS APPEAR TO BE MORE CONFIDENT IN THEIR TRAINING ABILITIES UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 27. TRAINING IS MORE RELIABLE UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 28. MANAGING THE DESIGNATION OF QUALIFIED TRAINERS IS EASIER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

| A | В | C | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 29. TRAINERS ARE ABLE TO DO A BETTER JOB OF TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 30. TRAINERS ARE ABLE TO GIVE TRAINEES MORE INDIVIDUALIZED TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 31. TRAINERS HAVE MORE DIFFICULTY JUDGING INDIVIDUAL PROGRESS UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 32. TRAINERS ARE BETTER ABLE TO JUDGE TRAINEES' TASK PROFICIENCY UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 33. TRAINERS ARE ABLE TO GET TRAINEES POSITION QUALIFIED FASTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 34. AOTS REDUCES THE TIME SPENT MAINTAINING TRAINING RECORDS.
- 35. SCHEDULING TRAINING IS MORE DIFFICULT UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 36. TRACKING TRAINEES' PROGRESS IN THE WORKCENTER IS EASIER UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 37. AOTS ASSISTS ME 1N KEEPING RECORDS FOR TRACKING TRAINEES' PROGRESS TOWARDS POSITION QUALIFICATION.
- 38. UPDATING AOTS TRAINING RECORDS (e.g., ATRS, ITRS) IS LESS TIME CONSUMING THAN COMPLETING THE PAPER WORK NEEDED TO MANAGE TRAINING UNDER CONVENTIONAL OJT.
- 39. AOTS PRODUCES REPORTS THAT CAN BE USED TO EVALUATE TRAINERS' COMPETENCE 14 TRAINING WORKCENTER TASKS.
- 40. I SPEND LESS TIME COORDINATING TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OUT.

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

^{41.} THE AVAILABILITY OF COMPUTER ASSISTED INSTRUCTION (CAI) IN THE WORKCENTER IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

^{42.} THE CAPABILITY FOR COMPUTER MANAGEMENT OF TRAINING IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

^{43.} THE CAPABILITY FOR IDENTIFYING TRAINING REQUIREMENTS IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

^{44.} THE CAPABILITY FOR IDENTIFYING TRAINING DEFICIENCIES IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

^{45.} DOING THE JOB IN THE OPERATIONAL ENVIRONMENT IS MORE DIFFICULT AFTER BEING TRAINED WITH AOTS CAI THAN WHEN BEING TRAINED UNDER CONVENTIONAL OJT.

^{46.} OVERALL, TRAINING TIME <u>DECREASED</u> AFTER PERSONNEL BECAME FAMILIAR WITH THE ON-LINE COMPUTER-ASSISTED TRAINING AND EVALUATION FEATURES OF THE AOTS.

USE THE FOLLOWING RESPONSE OPTION SCALE TO RESPOND TO STATEMENTS 47-51.

A B C D E F G

NONE OF SOMETIMES. ALL OF THE TIME.

- 47. I USE AOTS GENERIC POSITION TASK REQUIREMENTS (GPTRs) TO DETERMINE THE TRAINEE'S POSITION TRAINING REQUIREMENTS.
- 48. I USE THE AOTS QUALIFICATION ASSESSMENT CAPABILITIES TO DETERMINE TRAINEE QUALIFICATIONS
- 49. I USE AOTS GENERATED REPORTS TO DETERMINE HOW WELL TRAINEES ARE PROGRESSING IN TRAINING
- 50. I USE AOTS PERFORMANCE TESTS (PERFORMANCE EVALUATION CHECKLISTS) TO DETERMINE TRAINEE QUALIFICATIONS
- 51. I USE AOTS TESTS TO DETERMINE IF TRAINEES POSSESS THE KNOWLEDGE REQUIRED TO PERFORM TASKS

COMMENTS:

Figure J.1-1

TRAINING MANAGER SLT&E OPINION SURVEY

<u>DIRECTIONS</u>. On the accompanying answer sheet, please enter: your NAME in the "NAME GRID" block, your SSAN in columns 1-9 of the "NUMERIC GRID" block, number 06 in columns 24/25 of the "NUMERIC GRID" block.

Indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your answer or opinion.

Read every statement VERY carefully before selecting the response option that matches your opinion.

Use the following set of response options to indicate your opinions:

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 1. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO DETERMINE TRAINING REQUIREMENTS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 2. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO IDENTIFY TASK EVALUATION STANDARDS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 3. REMEDIAL TRAINING REQUIREMENTS FOR TASKS ARE MORE EASILY IDEN'TIFIED UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 4. I AM LESS ABLE TO IDENTIFY SPECIFIC TRAINING NEEDS WHEN I USE THE RESULTS FROM THE AOTS TASK EVALUATIONS THAN WHEN I USE THE RESULTS FROM CONVENTIONAL OJT EVALUATIONS.
- 5. I CAN KEEP TRACK OF A TRAINEE'S PROGRESS TOWARD TASK PROFICIENCY BETTER USING ACTS PROCEDURES THAN USING CONVENTIONAL OUT METHODS.
- 6. BY REVIEWING AOTS INDIVIDUAL TRAINING REQUIREMENTS (ITRs), I AM BETTER ABLE TO FOCUS MY ATTENTION ON POSITION QUALIFICATION AS OPPOSED TO JUST UPGRADE TRAINING.

TRAINING MANAGER SLT&E OPINION SURVEY

Use the following set of response options to indicate your opinions:

| A | В | c | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 7. I AM BETTER ABLE TO DETERMINE THE STATUS OF UPGRADE TRAINING IN THE WORKCENTERS BY REVIEWING THE AOTS WORKCENTER UPGRADE TRAINING REPORTS THAN BY REVIEWING CONVENTIONAL TRAINING STATUS REPORTS.
- 8. TRAINING NECESSARY TO ACHIEVE TASK PROFICIENCY IS MORE EASILY IDENTIFIED USING THE EVALUATION MATERIALS (e.g., KNOWLEDGE TESTS, PERFORMANCE TESTS) DEVELOPED UNDER AOTS THAN EVALUATION MATERIALS DEVELOPED UNDER CONVENTIONAL OJT.
- 9. MANAGING THE DATA REQUIRED IN MY OJT PROGRAM IS MORE DIFFICULT UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 10. BECAUSE OF THE QUALITY OF DATA CONTAINED IN THE AOTS REPORTS, I AM BETTER ABLE TO ADVISE ON TRAINING NEEDS AND DEFICIENCIES UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 11. OVERALL, TRAINING TIME <u>DECREASED</u> AFTER TRAINEES BECAME FAMILIAR WITH THE ON-LINE COMPUTER-ASSISTED TRAINING AND EVALUATION FEATURES OF THE AOTS.

COMMENTS:

Figure J.1-2

<u>DIRECTIONS</u>: On the accompanying answer sheet, please enter: your NAME in the "NAME GRID" block, your SSAN in columns 1-9 of the "NUMERIC GRID" block, number 05 in columns 24/25 of the "NUMERIC GRID" block.

Using the following set of response options, indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your answer or opinion.

| A | В | С | D | E | F | G |
|---------------------|----|---|---------|---|---|-------------------|
| STRONGLY DISAGRE | == | | NEUTRAL | | | STRONGLY AGREE |

Read every statement VERY carefully before selecting the response option that matches your opinion.

- 1. TRAINEES HAVE A BETTER UNDERSTANDING OF TASK PERFORMANCE REQUIREMENTS UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 2. THE USE OF TRAINING MATERIALS DELIVERED VIA THE AOTS HAS INCREASED THE TRAINEES' ABILITY TO PERFORM RELATED TASKS.
- 3. TRAINEES REQUIRE LESS SUPERVISION WHEN PERFORMING TASKS AFTER BEING TRAINED UNDER AOTS THAN AFTER BEING TRAINED UNDER CONVENTIONAL OJT.
- 4. TRAINEES RETAIN KNOWLEDGE AND SKILLS LONGER WHEN TRAINED UNDER AOTS THAN WHEN TRAINED UNDER CONVENTIONAL OJT.
- 5. TRAINEES PERFORM THEIR TASKS WITH FEWER ERRORS WHEN TRAINED UNDER AOTS THAN WHEN TRAINED UNDER CONVENTIONAL OJT.
- 6. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO DETERMINE TRAINING REQUIREMENTS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 7. AOTS BEHAVIORAL OBJECTIVES ENABLE ME TO IDENTIFY TASK EVALUATION STANDARDS BETTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 8. REMEDIAL TRAINING REQUIREMENTS FOR TASKS ARE MORE EASILY IDENTIFIED UNDER AOTS THAN UNDER CONVENTIONAL OJT.

Use the following set of response options to indicate your cpinions:

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |
| | | | | | | |

- 9. I AM <u>LESS</u> ABLE TO IDENTIFY SPECIFIC TRAINING NEEDS WHEN I USE THE RESULTS FROM THE AOTS TASK PERFORMANCE EVALUATIONS THAN WHEN I USE THE RESULTS FROM CONVENTIONAL OJT EVALUATIONS.
- 10. I CAN KEEP TRACK OF A TRAINEE'S PROGRESS TOWARD TASK PROFICIENCY BETTER USING AOTS PROCEDURES THAN USING CONVENTIONAL OUT METHODS.
- 11. AOTS EVALUATION STANDARDS ARE <u>TOO HIGH</u> FOR THE TASKS PERFORMED IN MY WORKCENTER.
- 12. AOTS EVALUATION INSTRUCTIONS ARE CLEAR AND EXPLICIT.
- 13. AOTS TESTS CONTAIN ENOUGH DETAIL TO ADEQUATELY DETERMINE TRAINEE QUALIFICATIONS.
- 14. AOTS TESTS COVER STEPS AND PROCEDURES THAT $\underline{\text{DO}}\ \text{NOT}$ REQUIRE EVALUATION.
- 15. QUALIFIED TRAINERS ARE MORE EASILY IDENTIFIED UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 16. TRAINERS ARE ABLE TO MANAGE MORE TRAINEES UNDER CONVENTIONAL OJT THAN UNDER AOTS.
- 17. TRAINERS ARE ABLE TO IDENTIFY AVAILABLE TRAINING MATERIALS MORE READILY UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 18. TRAINERS APPEAR TO BE MORE CONFIDENT IN THEIR TRAINING ABILITIES UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 19. TRAINING IS MORE RELIABLE UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 20. MANAGING THE DESIGNATION OF QUALIFIED TRAINERS IS EASIER UNDER AOTS THAN UNDER CONVENTIONAL OJT.

F14177 5 5

Use the following set of response options to indicate your opinions:

| A | В | C | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 21. TRAINERS ARE ABLE TO DO A BETTER JOB OF TRAINING UNDER ACTS THAN UNDER CONVENTIONAL OJT.
- 22. TRAINERS ARE ABLE TO GIVE TRAINEES MORE INDIVIDUALIZED TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 23. TRAINERS HAVE MORE DIFFICULTY JUDGING INDIVIDUAL PROGRESS UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 24. TRAINERS ARE BETTER ABLE TO JUDGE TRAINEES' TASK PROFICIENCY UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 25. TRAINERS ARE ABLE TO GET TRAINEES POSITION QUALIFIED FASTER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 26. AOTS REDUCES THE TIME SPENT MAINTAINING TRAINING MANAGEMENT RECORDS.
- 27. SCHEDULING TRAINING IS MORE DIFFICULT UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 28. TRACKING TRAINEES' PROGRESS IN THE WORKCENTER IS EASIER UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 29. AOTS ASSISTS ME IN KEEPING RECORDS FOR TRACKING TRAINEES' PROGRESS TOWARDS POSITION QUALIFICATION.
- 30. UPDATING AOTS TRAINING RECORDS (e.g., ATRS, ITRS) IS LESS TIME CONSUMING THAN COMPLETING THE PAPER WORK NEEDED TO MANAGE TRAINING UNDER CONVENTIONAL OJT.
- 31. AOTS PRODUCES REPORTS THAT CAN BE USED TO EVALUATE TRAINERS' COMPETENCE IN TRAINING WORKCENTER TASKS.
- 32. I SPEND LESS TIME COORDINATING TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OJT.

Use the following set of response options to indicate your opinions:

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 33. THE AVAILABILITY OF COMPUTER ASSISTED INSTRUCTION (CAI) IN THE WORKCENTER IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 34. THE CAPABILITY FOR COMPUTER MANAGEMENT OF TRAINING IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 35. THE CAPABILITY OF IDENTIFYING TRAINING REQUIREMENTS IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 36. THE CAPABILITY OF IDENTIFYING TRAINING DEFICIENCIES IS GREATER UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 37. DOING THE JOB IN THE WORKCENTER IS MORE DIFFICULT AFTER BEING TRAINED WITH AOTS CAI THAN WHEN BEING TRAINED UNDER CONVENTIONAL OJT.
- 38. OVERALL, TRAINING TIME <u>DECREASED</u> AFTER PERSONNEL BECAME FAMILIAR WITH THE ON-LINE COMPUTER-ASSISTED TRAINING AND EVALUATION FEATURES OF THE AOTS.

COMMENTS:

- 1--

Figure J.1-3

J.2 ACCEPTANCE SURVEYS

J.2.1 <u>Data To Be Collected</u>. The Acceptance Surveys are designed to collect views from AOTS participants on whether AOTS is easy to operate and user friendly. Acceptance Surveys consist of data collected from six sources as follows:

Supervisors--Figure J.2-1, p. 25 Training Managers--Figure J.2-2, p. 29 Trainers/Evaluators--Figure J.2-3, p. 33 Trainees--Figure J.2-4, p. 34 Commanders--Figure J.2-5, p. 36 Training Developers--Figure J.2-6, p. 38

Individuals who perform the function of more than one category should be considered to be in the first of those categories listed above. For example, if a person acts as both a Supervisor and an Evaluator or as both a Supervisor and a Trainer, he/she should be categorized as a Supervisor.

Using a response scale ranging from A to G, the respondents are asked to indicate how acceptable they believe the AOTS to be. Areas covered, with Appendix E references, are as follows:

Management of Training in Workcenters (E-32A)
Management of Products (E-32B)
Training on Management Programs & Management Data (E-32C)
Functions of Training Delivery Programs (E-33B)
Capabilities for Evaluating Training (E-34A)
Functions of Evaluation Programs (E-34B)
Training on Evaluation Programs (E-34C)
Training on Operation of Training Delivery Programs (E-33C)
Capabilities for Authoring Training Materials (E-13A)

- J.2.2 Requirements for DCR. The DCR should have the ability to administer surveys individually or in a group administration.
- J.2.3 <u>Frequency of Data Collection</u>. Data collected via Acceptance Surveys will be collected once during SLT&E from the training developers and twice from all other participants. Data from training developers will be collected in September 1988; data from other participant will be collected in January and May 1989-using the same set of acceptance survey statements both times. The purpose of repeating the acceptance survey admnistration is to capture any opinion changes that might occur during the interval.

Four open ended questions will be included one time on all acceptance surveys. The four items to be included on the developers one time administered acceptance survey and on the second administration of all other acceptance surveys are as follows.

WHAT DO YOU BELIEVE ARE THE STRENGTHS OF AOTS? WHAT DO YOU BELIEVE ARE THE WEAKNESSES OF AOTS? HOW WOULD YOU IMPROVE AOTS? WHAT CAPABILITIES WOULD YOU LIKE ADDED TO AOTS?

CANADA CAST OF THE OWNER OF THE

J.2.4 <u>Letters of Request</u>. Prior to administering the surveys, the DCR will submit a letter to the Squadron Commander requesting all AOTS participants attend the Survey administration event. Squadron Commanders and locations are found in Attachment 1 to Appendix J.

A Memo for Record will be sent to Major Blackhurst, advising him that the IST will be responding to the Developers Survey. The following letter may be used as a model for the letter to Squadron Commanders:

SAMPLE LETTER FOR SCHEDULING PERSONNEL FOR SLT&E SURVEYS

REPLY TO

The state of the s

ATTN OF: AFHRL/OL-AK

SUBJECT: AOTS Survey Administration

TO: 67 AGS/CC

1. Request the following personnel be scheduled to report to the Base Theater at 1300 hrs on 29 Feb 1988. The individuals will be asked to respond to surveys regarding their involvement with the prototype Advanced OJT System (AOTS). These appointments should take approximately 1 hour.

| FR000923847 | 12th AMU, | В | Flight |

JACK L. BLACKHURST, Major, USAF Commander, AFHRL/OL-AK

J.2.5 Administration of Surveys. The DCR will administer the surveys. The DCR will:

- Obtain a sufficient number of # 2 pencils, OMR sheets and Acceptance Surveys (Supervisor, Training Manager, Trainee, and Trainer/Evaluator), for distribution to the scheduled AOTS participants. (The Commander Surveys will PROBABLY be administered separately)
- Attend and supervise the administration event.
 - -- Administer the surveys in a room free from distractions
 - -- Distribute the surveys and OMR sheets to each participant
 - -- Provide instructions for completing the surveys (see sample instructions below)
 - -- Allow the respondents to leave and return to the administration area without the surveys (Surveys should remain with the DCR while respondents are absent from the survey administration area)
 - -- Answer any questions pertaining to the completion of the forms
 - -- Review ALL OMR sheets before the respondents leave the administration area and ensure that:

The correct SSAN was entered

The correct administration time was entered (1 for Jan, 2 for May)

The correct survey number was entered

All question and statement responses were entered

-- Collect all pencils, surveys and OMR sheets after the surveys have been completed

SUGGESTIONS FOR ADMINISTERING SURVEYS

WHAT TO THE SE

- Allow for errors (bring extra copies of surveys and OMR sheets)
- Administer the surveys in a classroom, conference room or theatre
- Apply a ratio of one DCR to approximately 15 respondents
- Administer surveys to personnel from multiple workcenters at a central location when possible
- Read the following SAMPLE INSTRUCTIONS to the respondents

THE PURPOSE OF THIS SURVEY IS TO DETERMINE HOW WELL PERSONNEL IN THE WORKCENTERS, WHO HAVE OPERATED THE AOTS, ACCEPT THE SYSTEM. USE THE ACCOMPANYING OMR SHEET AND INDEPENDENTLY RESPOND TO ALL QUESTIONS AND STATEMENTS. NOTE THAT SOME STATEMENTS MAY APPEAR TO BE IDENTICAL TO OTHERS BUT AFTER CLOSER EXAMINATION YOU WILL SEE THAT EACH STATEMENT REFERS TO A DIFFERENT TOPIC. READ EACH STATEMENT CAREFULLY BECAUSE SOME STATEMENTS FAVOR AOTS AND SOME FAVOR CONVENTIONAL OJT. AFTER YOU HAVE RESPONDED TO ALL OF THE STRUCTURED STATEMENTS, USE THE BACK OF THE SURVEY TO REPORT ANY COMMENTS OR SUGGESTIONS THAT YOU HAVE ABOUT AOTS. BE HONEST

AND TAKE AS LONG AS YOU WANT TO RESPOND TO THE SURVEY.

A STATE OF THE STATE OF

- J.2.6 <u>Time Required for Data Collection</u>. Approximate times for each administration of the surveys are as follows.
 - 1.5 hr. per workcenter--AFHRL distribute/collect surveys
 - 1.0 hr. per workcenter--Input data into AOTS data table
 - 1.0 hr. per individual--Complete surveys
- J.2.7 <u>Disposition of Data</u>. After the surveys have been collected, DCR will conduct a quick-look analysis of the OMR sheets to insure the integrity of the data entered by the respondents. The following plan will be followed:
 - Verify that all SSANs are entered and that the SSANs correspond with the names and SSANs on the list of incumbents.
 - Verify that all response marks on each OMR sheet are within the tolerance limits for the optical scanner.
 - Verify that each form's demographic data meets the standards set on the sample OMR sheet for the same survey.

If records are found to be out of tolerance or with error, the DCR will return the OMR sheets to the respondent for immediate correction.

Accurate records will be given to the Data Input Representative (DIR) for data input.

<u>DIRECTIONS</u>: On the accompanying answer sheet, please enter; your NAME in the "NAME GRID" block your SSAN in columns 1-9 of the "NUMERIC GRID" block number 08 in columns 24/25 of the "NUMERIC GRID" block

Using the following set of response options indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your opinion.

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 1. HAVING THE TASK ELEMENTS (SUBTASKS, ACTIVITIES, SUPPORTING SKILLS AND KNOWLEDGE, SUPPORT EQUIPMENT, ETC.) LISTED ON THE AOTS MASTER TASK LIST HELPS ME MAKE DECISIONS WHEN PLANNING TRAINING AND EVALUATION EVENTS.
- 2. HAVING THE TASK ELEMENTS (SUBTASKS, ACTIVITIES, SUPPORTING SKILLS AND KNOWLEDGE, SUPPORT EQUIPMENT, ETC.) LISTED ON THE AOTS MASTER TASK LIST HELPS ME WHEN I AM CONDUCTING TRAINING.
- 3. OTHER TRAINING REQUIREMENTS (FOR EXAMPLE, CONTINGENCY TASK TRAINING, ANCILLARY TRAINING, ADDITIONAL DUTY TRAINING, AND CAREER DEVELOPMENT COURSES) ARE EASILY IDENTIFIED USING THE AOTS.
- 4. THE AOTS MAKES IT EASY FOR ME TO IDENTIFY AIRMEN TRAINING AND EVALUATION REQUIREMENTS.
- 5. THE SEQUENCE FOR TRAINING, DELIVERED VIA THE AOTS, CAN BE EASILY CHANGED TO ACCOMMODATE UNSCHEDULED TRAINING OPPORTUNITIES OR HIGHER PRIORITIES FOR TRAINING.
- 6. USING GENERIC POSITION TASK REQUIREMENTS (GPTR) LISTS AS A BASELINE TO DEVELOP OPERATIONAL POSITION TASK REQUIREMENTS (OPTR) LISTS COMPLICATES THE PROCESSS OF IDENTIFYING PERFORMANCE REQUIREMENTS FOR AIRMEN.
- 7. TASKS ON OPERATIONAL POSITION TASK REQUIREMENTS (OPTR) LISTS ARE EASILY RANK-ORDERED WHEN IT IS NECESSARY TO OVERRIDE THE AUTOMATIC RANK-ORDERING FUNCTION.

Use the following set of response options indicate your response to each statement.

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 8. TRAINING REQUIREMENTS ON THE INDIVIDUAL TRAINING REQUIREMENTS (ITR) LISTS ARE EASILY RANK-ORDERED WHEN IT IS NECESSARY TO OVER-RIDE THE AUTOMATIC RANK-ORDERING FUNCTION.
- 9. TASKS CONTAINED ON THE AOTS MASTER TASK LIST ARE WELL DEFINED.
- 10. THE MASTER TASK LIST CONTAINS A COMPLETE LISTING OF ALL TASKS PERFORMED IN MY WORK CENTER.
- 11. THE MASTER TASK LIST EDITOR IS EASY TO USE.
- 12. THE AOTS PUBLICATION REFERENCE DATA PINPOINT EXACTLY WHERE A PERSON CAN FIND INFORMATION RELATED TO A PARTICULAR TASK.
- 13. WHEN TASKS ON GPTR LISTS ARE RANK-ORDERED AUTOMATICALLY, THE TASKS ARE ARRANGED IN THE APPROXIMATE ORDER IN WHICH THE TASKS WOULD NORMALLY BE TRAINED IN THE WORKCENTER.
- 14. WHEN TASKS ON OPTR LISTS ARE RANK-ORDERED AUTOMATICALLY, THE TASKS ARE ARRANGED IN THE APPROXIMATE ORDER IN WHICH THE TASKS WOULD NORMALLY BE TRAINED.
- 15. THE AOTS AIRMAN TRAINING RECORD CONTAINS ALL DATA REQUIRED TO DETERMINE THE POSITION QUALIFICATION REQUIREMENTS FOR AN AIRMAN.
- 16. THE AOTS MAKES IT EASY TO COMPARE AIRMEN TRAINING COMPLETIONS TO POSITION TRAINING REQUIREMENTS.
- 17. THE AOTS QUALIFICATION ASSESSMENT PROCESS PROVIDES AN INACCURATE LIST OF INDIVIDUAL TRAINING REQUIREMENTS (ITRS).
- 18. WHEN TRAINING REQUIREMENTS LISTED ON AN ITR ARE RANK-ORDERED AUTOMATICALLY, THE REQUIREMENTS ARE ARRANGED IN THE APPROXIMATE ORDER IN WHICH THE REQUIREMENTS WOULD NORMALLY BE TRAINED.

Use the following set of response options indicate your response to each statement.

| A | В | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 19. THE AOTS ACCRUATELY IDENTIFIES COMMON TRAINING REQUIREMENTS FOR GROUPS OF AIRMEN.
- 20. THE AOTS ACCURATELY IDENTIFIES MULTIPLE TRAINING REQUIRE-MENTS FOR A SINGLE AIRMAN.
- 21. WITH AOTS, IT IS EASY TO OVERRIDE THE AUTOMATED TRAINING AND EVALUATION ASSIGNMENT FUNCTION.
- 22. THE AOTS AIRMAN TRAINING RECORD (ATR) EDITOR ACCURATELY TRACKS AN AIRMAN'S TRAINING PROGRESS.
- 23. THE AOTS GENERATES EASILY UNDERSTOOD NOTICES TO INDICATE WHEN AIRMEN HAVE BEEN SCHEDULED TO ATTEND TRAINING CONDUCTED OUTSIDE OF THE WORKCENTER.
- 24. TRAINEE PROGRESS REPORTS GENERATED BY AOTS PROVIDE ALL DATA NECESSARY TO DETERMINE TRAINING STATUS.
- 25. THE AOTS GENERATES ACCURATE SCHEDULES FOR PENDING TRAINING AND EVALUATION EVENTS.
- 26. THE "USER" TRAINING PROVIDED PRIOR TO THE AOTS BEING IMPLE-MENTED WITHIN MY WORKCENTER ADEQUATELY PREPARED ME TO OPERATE THE AOTS MANAGEMENT FUNCTIONS.
- 27. THE "USER" TRAINING PROVIDED PRIOR TO THE IMPLEMENTATION OF AOTS ADEQUATELY PREPARED ME TO MAINTAIN MANAGEMENT DATA.
- 28. THE "USER" TRAINING PROVIDED PRIOR TO THE IMPLEMENTATION OF AOTS ADEQUATELY PREPARED ME TO OBTAIN INFORMATION FROM THE MANAGEMENT DATA FILES.
- 29. THE AOTS IS <u>DIFFICULT</u> TO OPERATE WHEN REVIEWING COMPUTER-DELIVERED TRAINING MATERIALS (i.e. CAI) ON-LINE.
- 30. THE TRAINING MATERIALS DELIVERED VIA THE AOTS ARE DISPLAYED IN A LOGICAL, EASY-TO-UNDERSTAND ORDER.

Use the following set of response options indicate your response to each statement.

| A | B | С | D | E | F | G |
|----------------------|---|---|---------|---|---|-------------------|
| STRONGLY DISAGREE | | | NEUTRAL | | | STRONGLY AGREE |

- 31. THE TRAINING MATERIALS DELIVERED VIA THE AOTS CONTAIN <u>INAC-CURATE</u> INFORMATION.
- 32. THE TRAINING MATERIALS DELIVERED VIA THE AOTS CONTAIN <u>CUR</u>-RENT INFORMATION.
- 33. THE COMPUTER EQUIPMENT AVAILABLE TO MY WORKCENTER FOR THE DELIVERY OF TRAINING IS SUFFICIENT TO SUPPORT THE NEEDS OF THE PERSONNEL ASSIGNED TO MY WORKCENTER.
- 34. THE CONTROLS ESTABLISHED WITHIN THE AOTS PREVENT UN-AUTHORIZED PERSONS FROM GAINING ACCESS TO EVALUATION MATERIALS.
- 35. THE USE OF THE AOTS EVALUATION PROCEDURES IN MY WORKCENTER HELPS TO ENSURE THAT AIRMEN ARE POSITION QUALIFIED.
- 36. ADMINISTERING <u>PRE-TRAINING</u> EVALUATIONS ON THE TASKS THE TRAINEES MUST PERFORM HELPS TO IDENTIFY TRAINING NEEDS.
- 37. THE USE OF AOTS EVALUATIONS INCREASES THE PRODUCTIVITY OF PERSONNEL ASSIGNED TO MY WORKCENTER.
- 38. EVALUATION MATERIALS REQUIRED FOR OFF-LINE USE ARE EASILY OBTAINED FROM THE AOTS FOR AUTHORIZED PERSONNEL.
- 39. THE USE OF AOTS PROCEDURES FOR EVALUATING PERSONNEL WITHIN WORKCENTERS HELPS TO DETERMINE TRAINING PROGRAM EFFECTIVENESS.
- 40. THE AOTS PROCEDURES FOR SCORING TESTS THAT ARE ADMINISTERED ON-LINE PROVIDE IMMEDIATE FEEDBACK (TEST SCORE) TO THE TRAINEE.
- 41. THE "USER" TRAINING PROVIDED PRIOR TO THE AOTS BEING IMPLE-MENTED WITHIN WORKCENTERS <u>DID NOT ADECUATELY PREPARE PERSONNEL</u> TO OPERATE THE TESTING FUNCTIONS.

Figure J.2-1

- 10. THE AOTS TASK PUBLICATIONS (TP) EDITOR ALLOWED FOR AN EXACT LINKAGE BETWEEN THE TASK REFERENCE AND THE TASK ELEMENTS (e.g., TERMINAL TASK, SUBTASK, BEHAVIORAL OBJECTIVE, TEST ITEM).
- 11. THE AOTS IDENTIFIED TASK AND TEST ELEMENTS (e.g. TERMINAL TASK, SUBTASK, BEHAVIORAL OBJECTIVE, AND TEST ITEMS) THAT MIGHT BE AFFECTED BY A PUBLICATION CHANGE.
- 12. THE AOTS BEHAVIORAL OBJECTIVE EDITOR WAS EASY TO USE IN THE NOVICE MODE.
- 13. THE AOTS BEHAVIORAL OBJECTIVE EDITOR WAS EASY TO USE IN THE EXPERT MODE.
- 14. THE AOTS TEST ITEM BANK EDITOR WAS EASY TO USE.
- 15. THE AOTS TEST ITEM BANK (TIB) EDITOR EFFECTIVELY STORED THE TEST ITEMS (e.g., KNOWLEDGE TEST ITEMS, PERFORMANCE EVALUATION CHECK LISTS, AND ORAL TEST GUIDES).
- 16. GRAPHICS WERE EASILY ADDED TO THE AOTS TEST ITEMS.
- 17. THE AOTS TEST EDITOR WAS EASY TO USE.
- 18. THE AOTS TEST EDITOR PERMITTED THE CREATION OF PERFORMANCE TESTS.
- 19. THE AOTS TEST EDITOR PERMITTED THE CREATION OF KNOWLEDGE TESTS.
- 20. TEST PARAMETERS (i.e., ITEM ANALYSIS, ITEM SCRAMBLING, INSTRUCTIONS) WERE EASILY ESTABLISHED USING THE AOTS TEST EDITOR.

Figure J.2-6

J.3 SLT&E DEPLOYMENT SURVEY

J.3.1 <u>Data To Be Collected</u>. The Deployment Surveys are designed to collect opinions from AOTS participants on whether the AOTS prototype should be deployed to the Air Force operational workcenters. A sample survey can be found on page 44 (Figure J.3-1). SLT&E Deployment Surveys consist of data collected from four sources as follows:

Commanders Training Managers Supervisors Trainers/Evaluators

If a person acts as both a Supervisor and an Evaluator or as both a Supervisor and a Trainer, he/she should be categorized as a Supervisor.

Using a response scale ranging from A to G, all of the respondents are asked to indicate how strongly they oppose or favor the deployment of the AOTS prototype to Air Force operational work centers (E-25A). After the Deployment Surveys are administered, structured interview responses are obtained from all commanders, training managers, and fifty percent of the supervisors, trainers and evaluators. The supervisors, trainers and evaluators are randomly identified by coding every other answer sheet, to be used by this group of Deployment Survey respondents, BEFORE the administration event begins.

- J.3.2 Requirements for DCR. The DCR must have the ability to administer surveys individually or in a group administration and be able to conduct a one-on-one interview. The DCRs must be able to ask questions and simultaneously record accurate interviewee responses. Any DCRs who do not possess the skills required to conduct a one-on-one interview session must be trained to do so.
- J.3.3 <u>Frequency of Data Collection</u>. The deployment surveys will be administered one time towards the end of SLT&E (May 1989)
- J.3.4 <u>Letters of Request</u>. Prior to administering the surveys, the DCR will submit a letter to the Commander requesting all AOTS participants attend the Deployment Strvey administration event. Squadron Commanders and locations are found in Attachment 1 to Appendix J.
- J.3.5 <u>Data Collection.</u> The DCR will administer the Deployment Survey and conduct one-on-one interviews. The interviews may be conducted immediately after the administration of the surveys, or at a later date as appropriate. Interviewees should NOT

be asked to wait at the administration site longer than 15 minutes after the completion of the deployment survey administration before being interviewed. Any interviewee who can not be scheduled to be interviewed within 15 minutes after the survey completion should be scheduled for another time.

J.3.5.1 Survey Administration. The DCR will:

- Obtain a sufficient number of # 2 pencils, Interview Response Sheets; OMR sheets, and Surveys (Supervisor, Training Manager, and Trainer/Evaluator) for distribution to the scheduled AOTS participants. (Surveys will probably be administered separately to commanders)
- Attend and supervise the administration event,
 - -- Administer the surveys in a room free from distractions
 - -- Distribute the surveys and OMR sheets to each participant
 - -- Provide instructions for completing the surveys (see sample instructions below)
 - -- Allow the respondents to leave and return to the administration area without the surveys (Surveys should remain with the DCR while respondents are absent from the survey administration area)
 - -- Answer any questions pertaining to the completion of the survey forms
 - -- Review ALL OMR sheets before the respondents leave the administration area and ensure that:

The correct SSAN was entered The correct Survey number was entered

All question and statement responses were entered

-- Collect all pencils, surveys and OMR sheets after the surveys have been completed

SUGGESTIONS FOR ADMINISTERING SURVEYS AND CONDUCTING INTERVIEWS

- Allow for errors (bring extra copies of surveys, OMR sheets, and Interview Response Sheets)
- Administer the surveys in a classroom, conference room or theatre
- Apply a ratio of one DCR to approximately 5 respondents
- Administer surveys to personnel from multiple workcenters at a central location if possible
- Read the following SAMPLE INSTRUCTIONS to the respondents

THE PURPOSE OF THIS SURVEY IS TO DETERMINE WHETHER PERSONNEL IN THE WORKCENTERS, WHO HAVE OPERATED THE AOTS, BELIEVE THE AOTS SHOULD BE DEPLOYED TO ALL WORKCENTERS. USING THE ACCOMPANYING OMR SHEET, INDEPENDENTLY RESPOND TO ALL QUESTIONS AND STATEMENTS. NOTE THAT SOME STATEMENTS MAY APPEAR TO BE IDENTICAL TO OTHERS BUT AFTER CLOSER EXAMINATION YOU WILL SEE THAT EACH STATEMENT REFERS TO A DIFFERENT TOPIC. READ EACH STATEMENT CAREFULLY BECAUSE SOME STATEMENTS FAVOR AOTS AND SOME FAVOR CON-

VENTIONAL OJT. AFTER YOU HAVE RESPONDED TO ALL OF THE STRUCTURED STATEMENTS, USE THE BACK OF THE SURVEY TO REPORT ANY COMMENTS OR SUGGESTIONS THAT YOU HAVE ABOUT AOTS. BE HONEST AND TAKE AS LONG AS YOU WANT TO RESPOND TO THE SURVEY.

J.3.5.2 <u>Interview Administration</u>. The DCR will conduct one-on-one interviews with previously selected respondents. The DCR will review the interviewee's Deployment Survey OMR sheet, and using a copy of the Deployment Survey, obtain additional information for any items that are <u>NOT</u> answered with a neutral (D) response.

If a response falls in the **NEGATIVE** category, the interviewer will substitute the words between the parenthesis with the appropriate terminology from each item and ask the follow questions:

- a. WHY DO YOU BELIEVE THE (OPTR EDITOR IS NOT CAPABLE OF BEING USED IN AN OPERATIONAL ENVIRONMENT)?
- b. HOW COULD THE (OPTR EDITOR BE IMPROVED TO MAKE IT MORE FUNCTIONAL IN THE WORKCENTERS)?

If a response falls in the POSITIVE category, the interviewer will substitute the words between the parenthesis with the appropriate terminology from each item and ask the follow questions:

- a. WHY DO YOU BELIEVE THE (OPTR EPITOR WILL BE A SUCCESS IN THE OPERATIONAL ENVIRONMENT)?
- b. WHAT DO YOU BELIEVE IS THE BEST FEATURE OF THE (OPTR EDITOR)?

If more than three lines are needed for a response, the interviewers will use the back side of the respective sheet ensuring that all continued response statements are numbered correctly.

If several individuals are interviewed simultaneously in the same room, the DCRs will conduct the interviews in separate parts of the room to provide as much privacy as possible to the interviewees.

Each DCR will interview one participant at a time. If groups are mixed, Commanders will be interviewed first, followed by Training Managers, Supervisors and Trainers/Evaluators.

The DCRs will take accurate notes of participants' comments

during the interview. As soon as possible after the interview has been concluded the DCRs will expand on the notes to ensure comprehensive data are collected and recorded.

J.3.6 Time Required for Deployment Data Collection.

- 1 hr. <u>per</u> AFHRL DCR to administer survey (each administration)
- 1 hr. per AFHRL DCR to conduct each interview
- 1 hr. per AFHRL DCR to write narrative from notes on Interview Response Sheet
- 1 hr. Input of data into AOTS data table (per interview)
- 1 hr. per survey participant to complete survey
- 1 hr. per interview participant to respond to interview
- J.3.7 <u>Disposition of Data</u>. After the surveys have been collected, the DCR will conduct a quick-look analysis of the OMR sheet to insure the integrity of the data entered by the respondents. The following plan will be followed:
 - Verify that all SSANs are entered and that the SSANs correspond with the names and SSANs on the list of incumbents.
 - Verify that all response marks on each OMR sheet are within the tolerance limits for the optical scanner.
 - Verify that each form's demographic data meets the standards set on the sample OMR sheet for the same survey.

If records are found to be out of tolerance or with error, the DCR will return the OMR sheet to the respondent for immediate correction.

If the respondent is interviewed, the DCR will perform the quick look analysis, described above, **before** recording the respondents' SSAN and verbal responses on the Interview Response Sheet. ACCURATE records **must** be given to the Data Input Representative (DIR) for data input.

PROTOTYPE AOTS DEPLOYMENT SURVEY

DIRECTIONS: On the accompanying answer sheet, please enter:

YOUR NAME in the "NAME GRID" block

TODAY'S DATE in the "DATE OF BIRTH" block

YOUR SSAN in columns 1-9 of the "NUMERIC GRID" block NUMBER 14 in columns 24/25 of the "NUMERIC GRID" block

Indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your opinion.

Read every statement carefully and use the following set of response options to indicate your opinion.

| A | В | C | D | E | F | G |
|----------|---|---|---------|---|---|----------|
| STRONGLY | | | NEUTRAL | | | STRONCLY |
| DISAGREE | | | | | | AGREE |

^{1.} THE AOTS MASTER TASK LIST (MTL) EDITOR IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{2.} THE AOTS GENERIC POSITION TASK REQUIREMENTS (GPTR) EDITOR IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{3.} THE AOTS OPERATIONAL POSITION TASK REQUIREMENTS (OPTR) EDITOR IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{4.} THE AOTS AIRMAN TRAINING RECORDS ARE AN IMPROVEMENT OVER THE AF FORM 623.

^{5.} THE AOTS INDIVIDUAL TRAINING REQUIREMENTS (ITRS) EDITOR IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{6.} THE AOTS PROGRESS REPORTS PROVIDE USEFUL INFORMATION IN THE OPERATIONAL WORKCENTERS.

^{7.} THE AOTS SCHEDULING FUNCTION IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{9.} THE AOTS PERFORMANCE TESTS (ORAL TEST GUIDES & EVALUATION CHECKLISTS) ARE SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

^{9.} THE AOTS KNOWLEDGE TESTS ARE SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

PROTOTYPE AOTS DEPLOYMENT SURVEY Cont.

Use the following set of response options to indicate your opinion.

A B C D E F G
STRONGLY NEUTRAL STRONGLY
DISAGREE AGREE

- 10. THE AOTS BEHAVIORAL OBJECTIVES ARE SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.
- 11. THE AOTS EQUIPMENT AND COMPUTER PROGRAMS CAN BE USED IN OTHER OPERATIONAL WORKCENTERS.
- 12. THE AOTS IS EASY FOR THE TRAINEE TO USE.
- 13. THE AOTS PROVIDES REALISTIC TRAINING ALTERNATIVES (CAI, IVD) FOR WHEN OPERATIONAL EQUIPMENT IS UNAVAILABLE.
- 14. MORE TIME IS AVAILABLE FOR TRAINING UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 15. THE CONDITIONS FOR TASK PROFICIENCY ARE MORE CLEARLY STATED UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 16. THE STANDARDS FOR TASK PROFICIENCY ARE MORE CLEARLY STATED UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 17. THE PROTOTYPE AOTS encompasses ALL PHASES OF AIR FORCE OUT REQUIREMENTS.
- 18. THE PROTOTYPE ADVANCED ON-THE-JOB TRAINING SYSTEM (AOTS) IS SUITABLE FOR USE IN THE OPERATIONAL WORKCENTERS.

Figure J.3-1

PROTOTYPE AOTS DEPLOYMENT INTERVIEW RESPONSE PACKET

| RESPONDENT'S NAME | & | SSAN | DATE |
|--------------------|----------|------|------|
| INTERVIEWER'S NAME | <u>-</u> | SSAN | DATE |

<u>DIRECTIONS</u> Before beginning the interview, review the respondent's Deployment Survey OMR sheet. Using the following key, determine the category in which each response fits then circle the appropriate response category for each corresponding item on this answer packet.

A, B, C = NEGATIVE D = NEUTRAL E, F, G = POSITIVE

Next, using a copy of the Deployment Survey as a guide, verbally obtain additional information for any items that the respondent answered with a NEGATIVE or POSITIVE response.

If a response falls in the **NEGATIVE** category, substitute the words between the parenthesis with the appropriate terminology from each item on the survey and ask the follow questions:

- a. WHY DO YOU BELIEVE THE (OPTR EDITOR IS NOT CAPABLE OF BEING USED IN AN OPERATIONAL ENVIRONMENT)?
- b. HOW COULD THE (OPTR EDITOR BE IMPROVED TO MAKE IT MORE FUNCTIONAL IN THE WORKCENTERS)?

If a response falls in the POSITIVE category, substitute the words between the parenthesis with the appropriate terminology from each item on the survey and ask the follow questions:

- a. WHY DO YOU BELIEVE THE (OPTR EDITOR WILL BE A SUCCESS IN THE OPERATIONAL ENVIRONMENT)?
- b. WHAT DO YOU BELIEVE IS THE BEST FEATURE OF THE (OPTR EDITOR)?

Record the responses directly on this interview response packet. If more than three lines are needed for a response, use the back side of the respective sheet ensuring that all continued response statements are numbered correctly.

Figure J.3-2

J.4 OBSERVER SURVEY

J.4.1 <u>Data To Be Collected</u>. The Observer Survey is designed to obtain opinions from non-AOTS participants on the usefulness of various AOTS documents and functions that are used to determine training and evaluation requirements. The observers are asked to evaluate several AOTS materials/products/procedures and in some instances, make a comparisons between AOTS and conventional OJT materials/products.

Using a response scale ranging from A to G the respondents are asked to indicate how strongly they disagree or agree with the Statements listed on the Observer Survey (Figure J.4, p.57). Areas covered, with Appendix E references, are as follows:

- --Functions of Training Delivery Programs (E-33B)
- --Management of Training in Workcenters (E-32A)
- -- Capabilities for Evaluating Training (E-34A)
- --Functions of Evaluation Programs (E-34B)
- --Training & Evaluation Documents Comparison (E-16B)
- --Evaluation Instruments & Procedures (E-18B)
- --Operational Equipment Alternatives (E-20B)
- --Products & Processes For Trainer Effectiveness (E-22B)
- J.4.2 Requirements for DCR. The DCR must be able to repeatedly:
 - Plan, coordinate and conduct a two-day AOTS tour for non-AOTS participants representing various MAJCOMS,
 - 2. Administer Observer Surveys.
- J.4.3 <u>Frequency of Data Collection</u>. Data will be collected one time from each MAJCOM representative some time between January and April 1989.
- J.4.4 Data Collection Procedure.
- J.4.4.1 <u>Coordinate a two-day MAJCOM observer tour</u>. The DCR will:
 - 1. Establish/schedule/arrange/conduct the following events:
 - a. AOTS Briefing
 - b. AOTS Workcenter demonstration and hands-on exploration
 - c. Observer Survey Administration
- 2. Using the records of a single imaginary Airman (to enable the observers to follow an airman through the AOTS procedures) assemble the following products for the Observer Survey Administration event:

- a. AOTS Airman Training Record (ATR)
 - History
 - Individual Training Requirements (ITR)
- b. Form 623 (Conventional OJT record)
- c. AOTS Master Task List (MTL)
- d. AOTS Generic Position Task Requirements (GPTR)
- e. AOTS Operational Position Task Requirements (OPTR)
- f. Job Qualification Standard (JQS) (Conventional OJT)
- g. AOTS Behavioral Objective
- h. AOTS Off-line Knowledge Test
- i. AOTS Off-line Performance Test
- j. AOTS Individual Position Qualification Status Summary
- 1. AOTS Unit Effectiveness Report
- m. AOTS Observer Surveys and Answer Sheets
- J.4.4.2 <u>Conduct two-day MAJCOM Observer Tour</u>. The DCR will perform the following tasks during the two day time interval:
 - 1. Conduct an AOTS briefing (AM of day one)
 - 2. Escort the observers to the workcenter demonstrations (day one)
 - 3. Escort the observers to the on-line, hands-on exploration session in the workcenters or where ever there are available terminals (remainder of day one and AM of day two)
 - 4. Administer Observer Survey (PM of day two)

- J.4.5 <u>Administration of Surveys</u>. The DCR will administed the surveys. The DCR will:
 - Reserve T-1 conference room or any class room with a long table.
 - Obtain from DAC the appropriate AOTS documents listed
 in J.4.4.1 # 2
 - Obtain a sufficient number of # 2 pencils, OMR sheets and Observer Surveys for distribution to the scheduled non-AOTS participants.
 - Attend and supervise the administration event.
 - -- Administer the surveys in a room free from distractions
 - -- Distribute the surveys, OMR sheets and appropriate AOTS and conventional OJT documents to each participant
 - -- Provide instructions for completing the surveys (see sample instructions below)
 - -- Allow the respondents to leave and return to the admin.stration area without the surveys (Surveys should remain with the DCR while respondents are absent from the survey administration area)
 - -- Answer any stions pertaining to the completion of the forms
 - -- Review ALL O heets before the respondents leave the administr. I area and ensure that:

The correct St N was entered

The correct survey number was entered

All question and statement responses were entered

-- Collect all pencils, surveys, OMR sheets and documents after the surveys have been completed

SUGGESTIONS FOR ADMINISTERING SURVEYS

- Allow for errors (bring extra copies of surveys and OMR sheets)
- Administer the surveys in a conference room or classroom
- Apply a ratio of one DCR to no more than 5 respondents
- Read the following SAMPLE INSTRUCTIONS to the respondents

THE PURPOSE OF THIS SURVEY IS TO DETERMINE HOW WELL NON-AOTS PERSONNEL, WHO HAVE BEEN INTRODUCED TO AOTS BUT HAVE NOT OPERATED THE AOTS IN THEIR OWN WORKCENTERS, ACCEPT THE SYSTEM. USE THE ACCOMPANYING OMR SHEET AND INDEPENDENTLY RESPOND TO ALL QUESTIONS AND STATEMENTS. READ EACH STATEMENT CAREFULLY BECAUSE SOME STATEMENTS FAVOR AOTS AND SOME FAVOR CONVENTIONAL OJT. AFTER YOU HAVE RESPONDED TO ALL OF THE STRUCTURED STATEMENTS, USE THE BACK OF THE SURVEY TO REPORT ANY COMMENTS OR SUGGESTIONS THAT YOU HAVE ABOUT AOTS. BE HONEST AND TAKE AS LONG AS YOU WANT TO RESPOND TO THE SURVEY.

J.4.6 <u>Time Required for Data Collection</u>. Time required for each tour and survey administration session is as follows:

16 hrs. AFHRL plan/coordinate tour

16 hrs. Escort Observers and administer survey

1 hr. Input data into AOTS data table

16 hrs. Per observer, plus travel time

- J.4.7 <u>Disposition of Data</u>. After the surveys have been collected, the DCR will conduct a quick-look analysis of the OMR sheet to insure the integrity of the data entered by the respondents. The following plan will be followed:
 - Verify that all SSANs are entered and that the SSANs correspond with the names and SSANs on the list of incumbents.
 - Verify that all response marks on each OMR sheet are within the tolerance limits for the optical scanner.
 - Verify that each form's demographic data meets the standards set on the sample OMR sheet for the same survey.

If records are found to be out of tolerance or with error, the DCR will return the OMR sheet to the respondent for immediate correction.

OBSERVER SURVEY

<u>DIRECTIONS</u>: On the accompanying answer sheet, please enter; your NAME in the "NAME GRID" block, your SSAN in columns 1-9 of the "NUMERIC GRID" block. number 13 in columns 24/25 of the "NUMERIC GRID" block.

Indicate your response to each statement by filling in the oval, on the answer sheet, that corresponds to the letter that represents your answer or opinion.

1. WHAT MAJCOM/SOA ARE YOU REPRESENTING?

- A. MAC
- F. ANG
- K. USAFE
- P. OTHER

- B. SAC C. TAC
- G. AFCC
- L. AFLC

- D. ATC
- H. AFSC I. AAC
- M. SPACECMD N. ESC

- E. AFRES
- J. PACAF
- O. AFMPC

2. WHAT IS YOUR CURRENT RANK?

- A. Ab
- B. Amn
- C. SrA
- D. Sgt
- E. SSgt
- F. TSgt
- G. MSgt
- H. SMSgt

- I. CMSqt
- J. CIVILIAN
- K. 2nd Lt
- L. 1st Lt
- M. CAPT
- N. MAJ
- O. LTC P. COL

OBSERVER SURVEY Cont.

Use the following set of response options to indicate your opinions towards the statements written below and on the next two pages:

| A | В | C | D | E | F | G |
|----------|---|---|---------|---|---|----------|

| DISAGREE | | | | | | AGREE |
| | | | | | | |

- 3. THE AOTS IS EASY TO ACCESS.
- 4. THE AOTS IS EASY TO USE.
- 5. AOTS PROVIDES THE CAPABILITY TO DISPLAY AN AIRMAN'S CURRENT TRAINING STATUS.
- 6. THE AOTS SECURITY SYSTEM PREVENTS TRAINEES FROM ACCESSING UNAUTHORIZED MENUS, OPTIONS, AND PROCESSES.
- 7. THE AOTS SECURITY SYSTEM PREVENTS UNAUTHORIZED INDIVIDUALS FROM ACCESSING AN AIRMAN'S OJT RECORDS.
- 8. THE AOTS SECURITY SYSTEM PREVENTS UNAUTHORIZED INDIVIDUALS FROM ACCESSING AOTS EVALUATION MATERIALS.
- 9. AOTS EVALUATION INSTRUMENTS (e.g., KNOWLEDGE TEST, PERFORMANCE TEST) CAN HELP SUPERVISORS IDENTIFY TASK TRAINING DEFICIENCIES.
- 10. AOTS EVALUATION INSTRUMENTS CAN HELP SUPERVISORS IDENTIFY TRAINEES' TASK KNOWLEDGE DEFICIENCIES.
- 11. AOTS EVALUATION INSTRUMENTS CAN HELP SUPERVISORS IDENTIFY TRAINEES' TASK PERFORMANCE DEFICIENCIES.
- 11. SUPERVISORS HAVE MORE FLEXIBILITY FOR EVALUATING AIRMEN'S TASK PROFICIENCY UNDER AOTS THAN UNDER CONVENTIONAL OJT.
- 12. AIRMEN RECEIVE MORE SPECIFIC TEST FEEDBACK UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 13. SUPERVISORS CAN DO A BETTER JOB OF DETERMINING TASK TRAINING REQUIREMENTS USING THE AOTS OPERATIONAL POSITION TASK REQUIREMENTS (OPTR) PRINTOUTS THAN WHEN USING THE TRAINEE'S JOB QUALIFICATION STANDARD (JQS).

OBSERVER SURVEY Cont.

Use the following set of response options to indicate your opinions.

| A | В | C | D | E | F | G |
|----------|---|---|---------|---|---|----------|
| STRONGLY | | | NEUTRAL | | | STRONGLY |
| DISAGREE | | | | | | AGREE |

- 14. SUPERVISORS CAN DO A BETTER JOB OF DETERMINING AN AIRMAN'S TRAINING REQUIREMENTS USING THE AOTS AIRMAN TRAINING RECORDS (ATR) WHICH INCLUDES TRAINING HISTORY AND THE INDIVIDUAL TRAINING REQUIREMENTS (ITR) THAN USING AN AF FORM 623 (OJT RECORD).
- 15. AIRMAN TRAINING RECORDS ARE EASIER TO MAINTAIN UNDER AOTS THAN UNDER CONVENTIONAL OUT.
- 16. THE AOTS INDIVIDUAL TRAINING REQUIREMENTS (ITR) ARE AIRMAN SPECIFIC.
- 17. THE AOTS ITR ACCURATELY IDENTIFIES AN AIRMAN'S CURRENT TRAINING NEEDS.
- 18. AOTS PROVIDES STANDARDIZED PROCEDURES FOR EVALUATING TASK PERFORMANCE IN AN OPERATIONAL SETTING.
- 19. AOTS PERFORMANCE TESTS, WHICH CONSIST OF AN ORAL TEST GUIDE AND A PERFORMANCE EVALUATION CHECKLIST, ARE VALID ASSESSMENTS OF TASK PROFICIENCY.
- 20. COMPUTER ASSISTED INSTRUCTION (CAI) LESSONS DEVELOPED UNDER AOTS ARE EASY TO USE.
- 21. A CAI LESSONS DEVELOPED UNDER AOTS IS A SUITABLE TRAINING ALTERNATIVE WHEN OPERATIONAL EQUIPMENT IS UNAVAILABLE.
- 22. THE PATH TO A CAI LESSON THROUGH THE AOTS LOGON IS EASY TO FOLLOW.
- 23. INTERACTIVE VIDEO DISKS (IVDs) DEVELOPED UNDER AOTS ARE EASY TO USE.
- 24. AN IVD DEVELOPED UNDER AOTS IS A SUITABLE TRAINING ALTERNATIVE WHEN OPERATIONAL EQUIPMENT IS UNAVAILABLE.

|----------|---|---|---------|---|---|----------|
| STRONGLY | | | NEUTRAL | | | STRONGLY |
| DISAGREE | | | | | | AGREE |
| | | | | | | |

- 25. MORE PEOPLE ARE ABLE TO COMPLETE TRAINING ON A GIVEN TASK WITHIN THE SAME TIME PERIOD USING IVDs THAN WHEN USING CONVENTIONAL OJT.
- 26. TRAINERS ARE ABLE TO ASSESS INDIVIDUAL TRAINING PROGRESS MORE EFFECTIVELY UNDER AOTS THAN UNDER CONVENTIONAL OJT.

Figure J.4

J.5 TEST SUBJECT DEMOGRAPHIC DATA

J.5.1 <u>Data Collection Procedure</u>. Demographic Data will be collected for the Control Groups as outlined in Appendix H.1. The Control Groups for which Demographic Data will be collected are as follows:

AFS 431%1 67 AGS--91st AMU--Flight Line 67 EMS--45th & 91st AMUs--Phase Dock AFS 732X0 MAE CAMS Orderly Room 67 CSG/DE--Orderly Room

J.5.2 <u>Letters of Request</u>. Request for DESIRE Output Products, using the letter shown in H.1.4.1 as a model, will be sent to the following POC:

67 CSG/DPM

J.5.3 <u>Completion of Procedure</u>. Follow the completion of procedure found in Appendix H.1.

J.6 OJT RECORDS

- J.6.1 Data Collection Procedure.
- J.6.1.1 For AOTS workcenters, derive data from AOTS prototype data table by extracting Airman Training Record data. (OJT data will now be computerized rather than being on the Forms 623.)

DAC will prepare a request to extract the data required for this analysis. These data include: name, SSAN, rank, organization, OPTR duty position, duty title, time to position qualification, total number tasks required, percentage of tasks completed, by month.

J.6.1.2 Comply with procedures found in Appendix H.2 for the following Control Groups:

AFS 431X1 67 AGS--91st AMU--Flight Line 67 EMS--45th & 91st AMUs--Phase Dock AFS 732X0 MAE CAMS Orderly Room 67 CSG/DE--Orderly Room

J.6.2 <u>Letters of Request</u>. Letters of request, indicating personnel to be included in the Control Groups will be sent to the following POCs:

67 AGS/MAAAA 67 CSG/DEA 67 EMS/MAE

The letter on the next page may be used as a model:

SAMPLE LETTER NOTIFYING POCS OF CONTROL GROUPS AND DATA TO BE COLLECTED

REPLY TO

ATTN OF: AFHRL/OL-AK

SUBJECT: ACTS Control Group and Data Requirements

TO: 67 AGS/MAAA

- 1. The 91st AMU/Flightline duty section within your organization have been selected as part of the control group for the test and evaluation of the Advanced On-the-Job Training System (AOTS). During this time, members of AFHRL will need to do the following:
- a. Review and extract data from AF Forms 623 to compare with the data coming from the experimental group.
 - b. Collect and review data from the MDC/Milap reports.
- c. Distribute and collect Weekly Inventory of Time Spent (WITS).
- 2. We will work hand in hand with you to make these arrangements and will do all that we can to be as unobtrusive as possible. Please feel free to call me at Ext. 2669 if I can be of assistance.

JACK L. BLACKHURST, Major, USAF Commander, AFHRL/OL-AK

J.6.3 <u>Completior of Procedure</u>. Continue through the completion of procedure as four in Appendix H.2 for Control Groups.

J.7 QUALITY CONTROL ASSURANCE SUMMARIES

J.7.1 <u>Data Collection Procedure</u>. Continue Procedure found in Appendix H.3, adding Control Groups, as follows:

AFS 431X1

- 67 AGS--91st AMU--Flight Line
- 67 EMS--45th & 91st AMUs--Phase Dock
- J.7.2 <u>Letters of Request</u>. Letters of request, indicating personnel to be included in the Control Groups will be sent to the following POCs:
 - 67 AGS/MAAAA
 - 67 EMS/MAE

The letter on page 75 may be used as a model.

J.7.3 <u>Completion of Procedure</u>. Continue procedure found in Appendix H.3.

- J.8 SECURITY POLICE QUALITY CONTROL TREND
- J.8.1 <u>Data Collection Procedure</u>. Continue Procedure found in Appendix H.4.

J.9 AIRCRAFT MAINTENANCE DATA

J.9.1 <u>Data Collection Procedure</u>. Continue Procedure found in Appendix H.7, adding Control Groups, as follows:

AFS 431X1

67 AGS--91st AMU--Flight Line 67 EMS--45th AMU--Phase Dock

J.10 BASE CRIME STATISTICS

J.10.1 <u>Data Collection Procedure</u>. Continue Procedure found in Appendix H.6.

J.11 WITS SHEETS

J.11.1 <u>Data Collection Procedure</u>. Continue Procedure found in Appendix H.5, adding Control Groups, as follows:

AFS 431X1 67 AGS--91st AMU--Flight Line

67 EMS--45th & 91st AMUs--Phase Dock

AFS 732X0 MAE CAMS Orderly Room 67 CSG/DE--Orderly Room

J.11.2 <u>Frequency of Data Collection</u>. Data will be collected in accordance with H.5.3 except for Active Duty component workcenters at Bergstrom AFB. These data will now be filled out and collected monthly instead of biweekly.

J.11.3 <u>Letters of Request</u>. Letters of request, indicating personnel to be included in the Control Groups will be sent to the following POCs:

67 AGS/MAAAA

67 CSG/DEA

67 EMS/MAE

J.11.3 <u>Completion of Procedure</u>. Continue through the completion of procedure as found in Appendix H.5.

SECTION III: SLT&E COMPLIANCE PROCEDURES

J.12 EXTERNAL ENTITIES INTERFACES

J.12.1 <u>Data To Be Collected</u>. Checklists of requirements for interfaces (bonds) between AOTS and external entities (Air Force Operational Measurement Center, Publications Management, Personnel Center, SPAS, CAMS, HRL, Personnel Data System, Base Supply System, CBPO OJT, FTD, Driver's School) to comply with the following paragraphs in the System Specification: 3.1.5.1.1-2 (pp. 37-38), 3.1.5.1.4-6 (pp. 39-41), and 3.1.5.1.8-10 (pp. 42-44). These checklists will be completed by AFHRL and DAC, using:

```
426X2 System Interface Checklist--Figure J.12-1, p. 72
431X1 System Interface Checklist--Figure J.12-2, p. 73
732X0 System Interface Checklist--Figure J.12-3, p. 74
811XX System Interface Checklist--Figure J.12-4, p. 75
```

The participants will be one member from the IST and one member of the DAC instructional technology team.

- J.12.2 Requirements for DCR. There are no special requirements for the DCR. He/she needs only to distribute the checklists to the participants and answer procedural questions (In each case where a System Specification has been met, a check mark will be placed in the blank preceding the item).
- J.12.3 Frequency of Data Collection. Data will be collected one time at the end of the first quarter of SLT&E (early November 1988) unless there are changes to the interfaces after the completion of the checklists. Any such change will necessitate a re-inspection accompanied by completion of the checklist again.
- J.12.4 <u>Administration of Check Lists</u>. In performing the required procedures for administration of the checklists, the DCR will:
 - Obtain copies of the following AOTS products: Master Task List (MTL) for the AFSCs; Airman Training Record (ATR) for one person, at random, from each AFS.
 - Obtain copies of the following Air Force documents: USAFOMC Occupational Survey Data for each AFSC; Policy Changes from AFS Functional Manager at AFMPC, printouts and/or rosters of Course, Training, & Evaluation Reguirements from CAMS, CBPO, SPAS and Units of Assignment.
 - Obtain an appropriate number of copies of the System Checklists.

- Reserve T-1 Conference Room for administering the checklists. (All participants will meet at the same time, although separate iterations may be held, if desired.)
- Notify participants of the time and place to meet.
- Oversee the completion of the checklists.

J.12.5 Time Required for Data Collection.

- 1 wk. Set up inspection procedure
- 1 hr. DCR oversee/correlate inspection
- 1 hr. per individual--Complete checklist

J.12.7 <u>Disposition of Data</u>. After the checklists have been collected, they will be turned over to DAC; DAC will review the checklist responses to insure that the interfaces are, in fact, present.

426X2 SYSTEM INTERFACE CHECKLIST

DIRECTIONS. Inspect the pertinent AOTS and non AOTS documents to determine if an interface (bond) exists between AOTS and the component identified in each item below. Write a T on the line to the left of each numbered item if you believe the statement is true. Write an F if you believe the statement is false. Write a U if you are unable to determine if the statement is true or false.

1. OCCUPATIONAL SURVEY DATA HAVE BEEN SECURED FROM THE UNITED STATES AIR FORCE OCCUPATIONAL MEASUREMENT CENTER (USAFOMC) FOR AFS 426X2.

| 2. | THE AOTS AFS 426X2 MASTER TASK LIST (MTL) CONTAINS |
|--------|--|
| | TASKS THAT HAVE BEEN TRANSFERRED DIRECTLY FROM THE |
| | USAFOMC MTL (AOTS ALPHA 00001 THROUGH 10000). |
| 3 | THE JOHE JES 126V2 MIT COMMITTED THEY (MILIMPEDS JIDIA |

- 3. THE AOTS AFS 426X2 MTL CONTAINS TASKS (NUMBERS ALPHA 10001 THROUGH 60000) THAT ARE MODIFICATIONS OF THE USAFOMC MTL.
- 4. THE AOTS AFS 426X2 MTL CONTAINS TASKS (NUMBERS ALPHA 60001 AND HIGHER, IF APPROPRIATE) THAT HAVE NOT BEEN INCLUDED IN THE 426X2 OCCUPATIONAL SURVEY INSTRUMENT.
- 5. FOR THE PROTOTYPE AOTS AFS 426X2, INTERFACES WERE ESTABLISHED TO ACQUIRE PRESCRIBED TRAINING REQUIREMENTS PUBLICATIONS.
- 6. AFMPC POLICY CHANGES IN AFS 426%2, IF ANY, ARE INTE-GRATED INTO AOTS.
- 7. AFS 426X2 PERSONNEL CHANGES FROM PERSONNEL DATA SYSTEM (PDS) FOR AIRMEN IN AOTS ARE UPDATED IN THE AOTS SYSTEM WEEKLY FOR ACTIVE DUTY AND MONTHLY FOR RESERVES & ANG.
- 8. AFS 426X2 COURSE DATA IDENTIFIED BY THE CORE AUTOMATED MAINTENANCE SYSTEM (CAMS) ARE UPDATED WITHIN 24 HOURS OF RECEIPT.
- 9. AFS 426X2 INTERFACES HAVE BEEN ESTABLISHED TO ENABLE AOTS TO MANUALY RECEIVE OFF-LINE TRAINING ACTIVITIES SCHEDULING DATA FROM NON-AOTS TRAINING AGENCIES.

Figure J.12-1

431X1 SYSTEM INTERFACE CHECKLIST

<u>DIRECTIONS</u>. Inspect the pertinent AOTS and non AOTS documents to determine if an interface (bond) exists between AOTS and the component identified in each item below. Write a T on the line to the left of each numbered item if you believe the statement is true. Write an F if you believe the statement is false. Write a U if you are unable to determine if the statement is true or false.

| 1. | OCCUPATIONAL SURVEY DATA HAS BEEN SECURED FROM THE UNITED STATES AIR FORCE OCCUPATIONAL MEASUREMENT CENTER (USAFOMC) FOR AFS 431X1. |
|----------|---|
| 2. | THE AOTS AFS 431X1 MASTER TASK LIST (MTL) CONTAINS TASKS (NUMBERS ALPHA 00001 THROUGH 10000) THAT HAVE BEEN TRANSFERRED DIRECTLY FROM THE USAFOMC MTL. |

Figure J.12-4

J.13 RESPONSE PERFORMANCE

- J.13.1 <u>Data To Be Collected</u>. Terminal response times and Master Task List search time to determine if response performance goals are met as listed in the System Specification, Section 3.2.1.1, p. 63.
- J.13.2 Requirements for DCR. DCRs must be able to use a stop watch correctly and have a working knowledge of computer use and AOTS.
- J.13.2 <u>Frequency of Data Collection</u>. Tests will be conducted one time during the second month of SLT&E (September 1988).
- J.13.4 <u>Administration of Tests</u>. DAC and AFHRL will conduct the tests in AFHRL locations in Buildings T-1, 1808, and 428 at Bergstrom AFB. Requirements for the tests will be:
 - Stop watch
 - Operating PC(s)
- J.13.4.1 Operation for Tests. Tests will be conducted as follows:
 - AOTS will be operating under normal load. "Normal load" will be whatever number of users are on line at the time the response performance test occurs, providing that said test shall occur during the daytime shift on a regular work day (Monday through Friday that is not a holiday).
 - "Terminal Response Time" will be the amount of time required from keyboard key press to display on screen.
 - For each test (Terminal Response and Master Task List search), five responses/searches will be conducted and an average taken for time to complete. The average time per test will be no greater than listed below.

Terminal Response Time 2.5 seconds Master Task List Search 1.0 minute

- Completion times will be listed on a plain piece of paper labeled: "Terminal Response Time" or "Master Task List Search Time."
- J.13.5 Time Required for Data Collection.
 - 1 hr. per tester

J.13.6 <u>Disposition of Data</u>. DAC will average the times listed for the tests and verify the average against the given standard to verify compliance with the Response Performance Goals in the System Specification.

J.14 HARDWARE RELIABILITY

J.14.1 <u>Data To Be Collected</u>. Reliability of the hardware IAW System Specification Section 3.2.3.1, p. 71. Data about the workcenter equipment will be collected during its daytime operation. Reliability will be calculated by determining the failures per hour and the time between failures for the following pieces of equipment: printer, terminal, monitor, and computer system. Data will be collected from the following logs, with their accompanying procedures for use:

AOTS Maintenance Action Report Log--Figure J.14-1, p. 80 AOTS Procedure: Maintenance Log--Figure J.14-2, p. 81

Reliability is essentially concerned with the Mean Time Between Failures (MTBF) that reflects, in hours, the average time a component or system will operate without a failure or error. Reliability excludes any failure caused by operator error, natural disasters, or sabotage.

- J.14.2 Requirements for DCR. There are no special requirements for the DCR. The DCR will distribute/collect the reports and submit them to DAC for analysis.
- J.14.3 <u>Frequency of Data Collection</u>. Data gathering will be an on-going process. Failure Reporting Forms will be collected quarterly during the reporting period of SLT&E (Aug 88--May 89).
- J.14.4 <u>Collection of Reliability Data</u>. In performing the required procedures for collection of reliability data of the hardware/software, the DCR will:
 - Obtain/distribute an appropriate number of copies of the logs and procedures for distribution to the field.
 - Distribute the logs and procedures to the AOTS workcenter librarian.
 - Collect a copy of each completed log at the end of each month of the reporting period.
 - Turn completed logs over to the DTM

J.14.5 Reliability Criteria.

J.14.5.1 <u>Equipment Reliability Goals</u>. Following are reliability goals during SLT&E:

| PARAMETER | THRI | ESHOLD | EST | TIMATE |
|--|-----------------|----------------|-----------------|----------------|
| MTBF | 250 | Hours | 400 | Hours |
| MTBDE (Mean Time Between Downing Event)s | 400 | Hours | | TBD |
| Mission Reliability | | 99.5% | | 96.5% |
| Mct | 0.5 | Hours | 0.4 | Hours |
| M max | 2.0 | Hours | 2.0 | Hours |
| Mptmax | 32.0 | Hours | 24.0 | Hours |
| Ai. | | 99.5% | | 99.7% |
| ма | | 99.4% | | TBD |
| Ao | | 99.8% | | TBD |
| Service Life | 10 | Years | +10 | Years |
| Operational Life Operating On/Off Cycles | 25,000 5,000 | Hours Hours | 50,000 5,000 | Hours Hours |
| Time Base (for calculations) | 24 | Hours | | N/A |

J.14.6 <u>Time Required for Data Collection</u>.

^{.25} hr. per individual filling out log 1.00 hr. per month--log collection by DCR

J.14.7 <u>Disposition of Data</u>. DCR will forward the completed forms to the DTM for analysis at the end of each collection period (quarter).

AOTS PROCEDURES MAINTENANCE LOG

Date: Sept. 2, 1986

Ref: AOTS 0100-2 (Rev.__) Aug. 25, 1986

Purpose: The maintenance log will provide a means of knowing how many items are awaiting maintenance. The maintenance log is used in conjunction with the AOTS MAINTENANCE ACTION REPORT FORM (AOTS 0100-1). The maintenance log will provide log numbers for each of the AOTS MAINTENANCE ACTION REPORT FORMS for tracking.

When to use: The maintenance log is used to record all equipment (hardware) failures. The single point contact person at each site (buildings 428, 1808, and T2) will complete this form.

HOW TO USE THE FORM:

1. A log number is used to track all maintenance action report forms. This number will be started at each site as follows:

Log # A000001 for building 428

Log # B000001 for building 1808

Log # C000001 for building T2

- 2. The Date, Time, ID# (normally the serial number), Item Description (PC, printer, etc.), and M/Org (maintenance organization) is taken from the AOTS MAINTENANCE ACTION REPORT FORM.
- 3. When maintenance is complete and the item is accepted as operational, the Date Fixed, Time and Action are recorded from the ACTS MAINTENANCE ACTION REPORT FORM. This constitutes closing out the log entry for this failure. (Action indicates hard or soft failures and any other information).
- 4. Page number is recorded on the bottom for the log. Also location of the log is recorded (building 428, 1808 or T2).

ROUTING:

- 1. The maintenance log is maintained by the single point contact at each site.
- 2. On a periodic bases, the log is sent to MDAC in building:428.

J.15 HARDWARE MAINTAINABILITY

J.15.1 <u>Data To Be Collected</u>. Determine if AOTS meets the hardware maintainability goals as outlined in System Specification Section 3.2.4.2, p. 78. Maintainability of the equipment during its normal operation will be assessed from reports of amount of time to repair equipment, both On-site and Off-site, using the:

AOTS Maintenance Action Report Form--Figure J.15-1, p. 85

AOTS Procedure: AOTS Maintenance Action Report Form (Figure J.15-2, p. 86).

ClayDesta Problem Log--Example, J.15-3, p. 87

Vax Downtime Log--Example, J.15-4, p. 88

Maintainability of hardware is, essentially, the Mean-Time-To-Repair (MTTR) a component or system; MTTR is the average number of hours it takes to repair a component or system to full operating condition.

- J.15.2 <u>Requirements for DCR</u>. There are no special requirements for the DCR. The DCR will distribute/collect the reports and submit them to DAC for analysis.
- J.15.3 <u>Frequency of Data Collection</u>. Data gathering will be an on-going process. Report Forms will be collected quarterly during the reporting period of SLT&E (Aug 88--May 89).
- J.15.4 Administration of Maintainability Measurement. In performing the required procedures for administration of maintainability measurement of the hardware, the DCR will:
 - Insure that each workcenter single point contact person has copies of the forms.
 - Collect copies of completed Maintenance Action Report Forms, ClayDesta Problem Logs, and Vax Downtime Logs at the end of each month of the reporting period.

J.15.5 Maintainability Criteria.

J.15.5.1 <u>Maintainability Goals for Hardware</u>. The following table indicates the maintainability goals for hardware:

| Parameter | Threshold |
|---|------------------------------------|
| Mean-Time-To-Repair (MTTR) on the System 90% upper limit to repair | 1.5 Manhours 2.5 Manhours |
| Mean-Time-To-Restore the System 90% upper limit to restore | 0.5 Manhours 1.0 Manhours |
| Mean-Time-To-Remove and Replace 90% upper limit to remove and replace | 0.4 Manhours 1.25 Manhours |
| Direct maintenance manhours per equipment operating hour | 0.05 Hours |
| Response time to site of failure | 4.0 Hours |
| Principal Period of Maintenance | 16 Hours/day 7 Days per Week |
| Off line maintenance average MTTR 90% upper limit to repair | 1.5 Manhours 6.0 Manhours |
| Mean Preventive Maintenance Time | 3.0 Hours |
| Mean Maintenance Time | 3.4 Hours |
| Logistic Delay Time | 4.0 Hours (90%ile) |
| Maximum Corrective Maintenance Time | 8.0 Hours |
| Administrative Delay Time | 2.0 Hours |
| Maintenance Downtime | 7.4 Hours |
| Maintenance Manhours/month | 6.0 hr/mo |
| Frequency of Preventive Maintenance | 1 time per month per workcenter |

J.15.6 Time Required for Data Collection.

- .25 hr. per individual filling out form/report 1.00 hr. per month--DCR form/report collection
- J.15.7 <u>Disposition of Data</u>. DCR will forward the completed forms to THE DTM for analysis at the end of each collection period (quarter).

AOTS PROCED. RES AOTS MAINTENANCE ACTION REPORT FORM

| Date: | Sept. 2, 1986 |
|-------|-------------------------------------|
| Ref: | AOTS for 0100-1 (Rev) Aug. 25, 1986 |

Purpose: Provide a procedure in using the AOTS MAINTENANCE ACTION REPORT FORM. Procedure for handling the form is also included. The form is also used to record corrective actions taken. The form is also used to input data to the reliability/maintainability models.

When to use: The AOTS MAINTENANCE ACTION REPORT FORM is to be used anytime problems are encounter with AOTS equipment (hardware) items. This includes failures of equipment or uncertain operation of the equipment.

HOW TO USE THE FORM:

1. When a problem is encountered with any AOTS equipment (hardware such as a Zenith Z-248 PC, printer, communications, etc., the AOTS MAINTENANCE ACTION REPORT FORM is used to report the problem.

The originator fills in the following parts: NAME, DATE, LOCATION, TIME, TYPE OF EQUIPMENT, Serial Number, Other ID; (if any), and a description of the failure.

- 2. The originator places their name in the top part labeled: NAME_____.
- 3. The report is dated and time is also indicated (standard military time to be used). The date is entered month, day, year. (___/___).
- 4. The location where the equipment is to be entered in the area marked "LOCATION: ____".
- 5. The TYPE OF EQUIPMENT can be checked if described or written in under OTHER. The serial number must be filled in and if any other type of identification number is also used, that to be filled ir under "Other ID#: ___".
- 6. A description of failure is required. If there is a printout or other physical evidence of the failure, that should be attached to the form.

The following to be filled out by the single point contact at each site (building 428, 1808, and T2).

- 7. "Problem report to: section is filled out by the single point contact at each site. This refers to who will actually perform the maintenance on the failed item. (Example could be Infotron for the communication equipment or Hewlett Packard for the laserjet printers.)
- 8. The date and time the action is reported to maintenance organization is also filled out at this time. (Date and Time spots.)

9.. The "ID;" indicates any special numbers. Example could be a return authorization number or a name of an individual wno will handle this action:

The next section is filled out by the person who performs the actual maintenance. If the maintenance action is accomplished by a swap of component(s), the single point contact person continues to fill out this section.

- 10. When the date and time of the maintenance is started is recorded in the date and time parts.
- 11. Date and time the maintenance is finished is recorded in the appropriate spots.
- 12. Organization responsible for the maintenance is entered next (Organization: _____).
- 13. Corrective action is a description of what was required to return the failed item back to serviceable condition. Any parts that failed will be identified as well as new parts used to repair the item. The back of the form can be used for additional space to write in. If an assembly, subassembly, or traceable component is changed and the revision level of the new parts is different from the original, the new revision levels is to be recorded for this item.
- 14. Time take to repair is to be filled out as an estimate by the maintenance person after maintenance is complete. Time awaiting parts is required if any delays are encountered in getting parts. The time delay is to be expressed in hours.

The next section is required only if a change to configuration occurs.

15. If the configuration of the item is changed, revision level and affected CI is to be recorded by the single point contact person.

Acceptance section is to be completed by the single point contact person.

- 16. Acceptance of the equipment as operational and ready for use is required to close out the maintenance action.
- 17. Certification of configuration is only required is a change to the configuration occurs. Certification indicates that the item is fully operational and meets all specifications for AOTS.

ROUTING:

- 1. The person having trouble with a hardware item fills out the upper level of information. Date, time name, and location followed by failed item and description of the problem.
- 2. The form is then taken to the single point contact person at each site. The single point contact person logs the form. A log number (next in order) is also placed at the top of the maintenance action

form.

3. The single point contact person then determines the correct maintenance group to repair the failed item. This information is written into the form.

13

- 4. Maintenance person fills out the next repair section except when the maintenance on the item is accomplished by a swap or similar method. In the latter case, the single point contact person fills out the repair action section.
- 5. When repair efforts have been finished, the form is given back to the single point contact person. The log is closed out and a determination of configuration change is made. If no change has occurred then the remaining action is determination if the unit is operational again.
- 6. If the item is fully operational, the single point contact person at each site accepts the unit back into full operation.
- 7. Only if a configuration change has occurred will the operation of the unit require certification as fully meeting operational requirements and specifications. This is done by an authorized person from the configuration control system.
- The single point contact person will file the finished form.
- 9. On a regular schedule, all forms will be collected by MDAC and used in the reliability and maintainability programs. The logs will also be collected on a regular schedule.

CLAYDESTA PROBLEM LOG

| WE CALLED | CALL RETURNED | ву | RESULTS |
|----------------|---|---------------------------|---|
| 2:00 6 Nov 86 | them need upon such final final also said hand only offer state | Philip Lawrence | We reported Line Hits to ClayDesta. |
| | 2:30 6 Nov 86 | Joann Cruz (ClayDesta) | The line problems were intermittant, and they could not duplicate the problem. |
| 3:30 7 Nov 86 | | Philip Lawrence | We reported line hits to ClayDesta. |
| | 4:00 7 Nov 86 | Joann Cruz (ClayDesta) | ClayDesta isolated the problem to SouthWestern Bell, and they called to report it. SouthWestern Bell gave them a ticket number of #50518, and said that they will need 1 - 2 hours to fix the line. |
| 4:00 17 Nov 86 | | Philip Lawrence | We reported Line Hits to ClayDesta |
| | 8:50 18 Nov 86 | Joann Cruz | They tested the line last night, and isolated the problem to the Austin Southwestern Bell office. The problem has not been signed off yet. They will test again at 11:30 today. |
| 1:00 18 Nov 86 | | Philip Lawrence | I contacted Jerry Farias (ClayDesta) who is dealing with SW Bell. He said that the line would be up in 1 1/2 hrs. |
| 3:30 18 Nov 86 | | Philip Lawrence | I called Jerry who said that they had bumped the priority to the 4th level at SW Bell. |
| 4:00 18 Nov 86 | ; | Philip Lawrence | I called Joann Cruz, who said that they had bumped the priority to the division level at SW Bell. |
| 4:10 18 Nov 86 | Joann Cruz | - , | Joann Cruz said SW Bell was replacing their low power repeaters to solve the problem. She got an estimated time of completion of 5:00 from SW Bell. |
| 7:17 19 Nov 86 | 5. | Glenn McBride | Called ClayDesta customer |

J-89

Figure J.15-3

Called ClayDesta customer service because the line was still down. They had no record

of any transactions after 11:30 17 Nov 86. They did not know the current status of the line.

一年の かんないない

VAX DOWN TIME LOG ;

| WE CALLED | PROBLEM | RESULTS |
|-----------|--|---|
| 14 Jan 87 | Change to Vax\VMS 4.5 with no warning. | This cost 1 hour (8 - 9) of down time for a software change. The down time would have been avoided if we had any warning about the change |
| 19 Jan 87 | Memory upgrade to 36 Meg. | This cost 4 hours (8 - 12) of down time. If we had any warning of the upgrade, we could have downloaded our work to the IBM-PC's and kept working. |
| 20 Jan 87 | Logins disabled on the Vax. Lupe was working with an Ether Net upgrade. | Again we had no warning. This only cost some early morning time(7 - 8) |
| 20 Jan 87 | Vax down for EtherNet Installation at about 12. | We had some warning, and it did not cause us problems: The system was down for 1 hour. |
| 21 Jan 87 | Vax down for EtherNet repairs at 10:04. We had no advance warning. | Again we had no warning. We could continue working on the IBM-PC's if we had even 10 minutes warning. system down for 3 hours. |
| 22 Jan 87 | Vax down for repairs at 8:00. Up again at 1:50. | We were given a warning banner before the system went down, but nobody had time to download their work sinc, they were just getting here when it went down. |
| 26 Jan 87 | Vax down for PM at 10:30. | They gave us adequate warning this time. |
| 26 Jan 87 | Vax back up at 2:45. | No message indicating that the system was up has appeared. |
| 26 Jan 87 | Vax down again with no warning at 3:00. | Several people were caught in the middle of editing files. |
| 9 Feb 87 | One of the links from the Mux to the Vax is not working after the links were swapped. Lupe Yzaguirr and Lt Imsand are not there this week. | After switching the lines on Sat., Lupe and Lt.Imsand are both unavailable. |
| 13 Feb 87 | Brooks end. Lupe has | 7 or associated mux hardware on the been notified. He suggested that I ciated with the bad port on that ms continue. |
| 17 Feb | problem with port TXF Brooks end. Lupe has to another line that | 7 or associated mux hardware on the been notified. The line was switched was unassigned. |
| 20 Feb 87 | power outage at Brook | 's from 7:00 to 8:30. |
| 11 Mar 87 | Vax down approx. 20 m | in. for unknown reasons. |

J.16 SYSTEM AVAILABILITY

J.16.1 <u>Data To Be Collected</u>. Data collected in procedures J.14 and J.15 will be used to calculate the measures of availability of the following: System, Computer System Component, Terminal Component, Printer Components, and Digitizer Pad Component, as found in System Specification Section 3.2.5, p. 83.

Availability is essentially concerned with the percentage of the time equipment is available for use as opposed to down time.

Requirements for passing the availability specifications are as follows:

| Parameter | Threshold |
|--|-----------|
| System Wide Availability | 95% |
| Computer System Component Availability | 96.5% |
| Terminal Component Availability | 98% |
| Printer Components Availability | 98% |
| Digitizer Pad Component Availability | 99% |

J.16.2 <u>Requirements for DCR</u>. There are no special requirements for the DCR. He/she will turn over reports collected quarterly in procedures J.14 and J.15 to the DTM.

J.16.3 <u>Time Required for Data Collection</u>. No additional time will be required for data collection.

J.16.4 <u>Disposition of Data</u>. Upon receipt of forms for procedures indicated, DAC will analyze the information relative to availability of equipment as opposed to downtime.
